* Denotes first year for which figures include Alaska and Hawaii.

1 Computed from unrounded numbers.

2 Includes small quantity of lard used in other fats and oils products, 1899–1908; beginning 1909, excludes quantities so used.

3 Prior to 1909, data are for year beginning July.

4 Beginning 1934, excludes apples from noncommercial areas. Citrus fruits on crop year basis, 1941 to date.

5 Beginning 1941, year begins October or November prior to year indicated.

6 Data on pack-year basis, 1909–1942, beginning early June of year indicated.

7 Citrus juice, all years, and grapejuice, 1909–1933 and 1948–1970, on pack-year basis beginning November prior to year indicated.

8 Pack-year data, beginning middle of year indicated.

9 Beginning 1956, includes chilled sections and salads.

10 Beginning 1955, includes chilled citrus juices.

Series G 881–915. Apparent Civilian Per Capita Consumption of Foods: 1849 to 1970—Con.

[In pounds, except eggs]

Year	Vegetables: Fresh (farm weight)	Vegetables: anned [1]	Vegetables: Frozen	Melons (farm weight)	Dry beans [2]	Dairy products: Total milk for human consumption	Dairy products: Fluid milk and cream [3]	Dairy products: Condensed and evaporated milk	Dairy products: Cheese	Dairy products: Ice cream (product weight)	Eggs (number	Chicken and turkey [4] (ready-to-cook)	Sugar, cane and beet (refined)	Wheat flour	Corn flour and meal	Peanuts (shelled)	Coffee (green-bean basis)

Chapter H

Social Statistics

Social Security and Welfare (Series H 1-411)

H 1-411. General note.

The concept of social welfare used in these series, and more particularly in series H 1–47, includes all governmental programs directed specifically toward promoting the well-being of individuals and families. Except for the veterans' program, social welfare activities in the United States remained largely a local responsibility throughout most of the 19th century. Following the passage of the first compulsory attendance law in Massachusetts in 1852, the movement for tax-supported public schools received increasing support. State governments began to establish separate State institutions for the mentally ill and other dependent groups in the late 1850's and State boards of health were in operation in a number of States by 1900. State laws authorizing pensions for the blind, for orphans and their mothers, and for the aged were adopted in a number of States during the period 1900–1930. Workmen's compensation spread rapidly between 1911 and 1920. Special retirement systems for State and local government employees, principally teachers, policemen, and firemen, were in existence in a few localities before 1900. The civil service retirement system for Federal employees was established in 1920.

It was not until the Social Security Act of 1935, however, that the Federal Government participated in any major way in permanent welfare programs for the general population. The Social Security Act established a national system of old-age insurance (old-age, survivors, disability, and health insurance—OASDHI, since July 1966) and a Federal-State system of unemployment insurance, and provided Federal grants-in-aid to the States for public assistance, maternal and child health and welfare services, general public health services, and vocational rehabilitation services.

Since 1936, a substantial volume of statistical data relating to OASDHI, unemployment insurance, and public assistance is available from the operating records of the administering agencies. Statistics based on operating data can also be obtained for the railroad retirement program, the Federal employee retirement programs, and the State temporary disability insurance programs. Estimates of expenditures under State workmen's compensation programs and State and local employee retirement systems have been made by the Social Security Administration.

The principal source of statistics of social insurance and welfare programs is the Social Security Administration, which presents annual figures in the *Annual Statistical Supplement* to the monthly *Social Security Bulletin* (for the years 1939–1948 in the *Social Security Yearbook;* for 1949–1954, in the September 1950–1955 issues of the *Bulletin;* since 1956, issued separately), and in annual articles in the October issues of the *Social Security Bulletin*, 1955–1965, and the December issues generally since 1966.

Figures shown for recent years are subject to revision. All figures represent the latest estimates available and may differ from those shown in the sources cited. In all such cases, the revised figures were obtained from the Social Security Administration's unpublished data or estimates.

H 1-31. Social welfare expenditures under public programs, 1890–1970.

Source: 1929–1964, U.S. Social Security Administration, *Social Welfare Expenditures Under Public Programs in the United States, 1929–1966*, Research Report Number 25; 1965–1970, *Social Security Bulletin*, December 1971 and January 1974.

Estimates presented for 1890 and 1913 were primarily based on the following: R. A. Musgrave and J. J. Culbertson, "The Growth of Public Expenditures in the U.S., 1890–1948," *National Tax Journal*, June 1953; and J. Frederic Dewhurst and Associates, *America's Needs and Resources*, Twentieth Century Fund, New York, 1955; and reports of official agencies.

Scattered data relating to social welfare programs in particular localities or States may be found in other sources. The definitions used in these sources, however, are highly variable and the original source of the data is frequently not indicated. No data comparable to those shown for 1929–1970 are readily available.

Social welfare expenditures under public programs represent payments (but not loans) from Federal, State, and local revenues (general and special) and trust funds. Capital outlay for hospitals, schools, and other facilities are included as well as administrative expenses.

Data on Federal programs include expenditures in Alaska and Hawaii for all years; State and local data include expenditures in Alaska and Hawaii from the year of their admission to the Union. Data include Federal expenditures (and matching local expenditures under grant programs) in Puerto Rico, the Virgin Islands, Guam, Trust Territory of the Pacific, American Samoa, and the Panama Canal Zone, as well as expenditures to beneficiaries of some of the income-maintenance programs residing in foreign countries, and that part of Defense Department education and health expenses incurred abroad.

Wherever possible, data for Federal, Federal-State, and Federal-local programs were drawn from published and unpublished materials of the appropriate Federal agencies, and from the annual *Budget of the United States Government*. The principal source for State, State-local, and local program statistics has been the census of governments. To bridge gaps, especially for early years of the series, and to augment fragmentary data, the Social Security Administration has estimated expenditures for certain years for some programs, e.g., State and local public employee retirement benefits and administration.

In the social insurance category, data for old-age, survivors, disability and health insurance, series H 6, include the health insurance for the aged program (Medicare). The public employee retirement figures, series H 8, exclude refunds of contributions to employees leaving public service; they include payments to retired military personnel and to their survivors. Data on unemployment insurance and employment services, series H 9, include benefits under the regular State programs, programs for Federal employees and ex-servicemen, trade adjustment and cash training allowances, and payments under the extended unemployment insurance programs of 1958 and 1961. The data for State temporary disability insurance, series H 12, which exists in only a few States, include cash and medical benefits. Also included are benefits provided by private plans where the State law permits such insurance in lieu of the government protection. The data include the State costs of administering State plans and of supervising private plans; administrative expenses of the private plans are not available. Similarly, workmen's compensation data, series H 13, include cash and medical benefits paid under

Federal and State laws by private insurance carriers, State funds, and self-insurers; administrative costs of private carriers and self-insurers are not available. "Black Lung" benefits are included under workmen's compensation, beginning 1970.

Total public aid expenditures, series H 14, include public assistance, work relief, other emergency aid, surplus food for the needy, food stamps, repatriate and refugee assistance, and the Job Corps, Neighborhood Youth Corps, and work-experience training programs under the Economic Opportunity Act and related laws. Certain other economic opportunity programs are included under total "other social welfare," series H 28, as anti-poverty programs. The figures on public assistance, series H 15, include payments under the categorical cash and medical programs established by the Social Security Act, as amended, and general assistance payments from State and local funds only. Beginning 1969, work incentive program expenditures are included.

The estimates for health and medical programs, series H 16, are derived from the Census of Governments and the U.S. *Budget* (cited above). They include net public expenditures for hospital and medical care (after deduction of fee payments), hospital construction, school health, community and related public health services, and maternal and child health services. Through 1966 they exclude expenditures for domiciliary care (other than in mental and tuberculosis institutions) which are included under institutional care, series H 30. They include Federal domiciliary care beginning 1967 because Federal hospital and domiciliary care expenditures are no longer separable in the source document for this portion of the series, the Special Analyses on Health of the U.S. *Budget*. They also exclude expenditures for health and medical services provided in connection with OASDHI, State temporary disability insurance, workmen's compensation, public assistance, vocational rehabilitation, and veterans' and antipoverty programs; these are included in the total expenditures shown for those programs. Also excluded are international health activities. Omitted from the health category, but included under education, series H 17–20, are expenditures for medical schools and other health training institutions.

The estimates for veterans programs, series H 21–26, were obtained from the *Annual Report of the Veterans Administration*, supplemented by unpublished data. Pension and compensation expenditures, series H 22, include burial awards and, beginning 1965, subsistence payments to disabled veterans undergoing training and special allowances for survivors of veterans who did not qualify under OASDHI. The life insurance figures, series H 25, exclude the Servicemen's Group Life Insurance program. Administrative expenses are included in each of the five categories of veterans' program expenditures shown. However, these expenditures are reported in the series on a somewhat different basis in three time periods: (1) Before 1947, only unallocated administrative costs are available; these were distributed among the programs by the Social Security Administration, in accordance with the historical relation (derived from later-year data) that administrative expenses bore to program expenditures for each of the veterans' programs; (2) for 1947–1964, part of the administrative expenses were allocated by the Veterans Administration to each program and the remainder was allocated among the programs by the Social Security Administration in the same ratio that allocated costs for each is to total allocated costs; (3) beginning 1965, only the allocated administration is added to the program figures; all the unallocated administration is added to the residual category, welfare and other, series H 26.

The education data, series H 17–20, include expenditures for support, maintenance, and operation of local, State, and Federal elementary-secondary, vocational, adult, and higher education institutions. Included are expenditures for the support of students, the construction of educational facilities, and the administrative operations of State and local departments of education and the U.S. Office of Education.

The primary basis for the education estimates are the various Federal and State expenditures series compiled by the U.S. Office of Education and appearing in the annual editions of the *Digest of Educational Statistics*. Data from these sources, however, are adjusted to fit the conceptual framework for these social welfare expenditures series. For example, the latter omit the various student and school construction loan programs and certain research and development expenditures that have subordinate educational objectives. Also excluded are in-house training programs conducted outside of educational institutions and expenditures for international education (except for U.S.-operated schools abroad).

In addition, certain programs included in the Office of Education series, such as veterans' benefits, manpower and training programs, school meals, and health-related research facilities, are included elsewhere in the social welfare expenditures series and are therefore not included as education expenditures.

The data on Federal housing expenditures, series H 27, are supplied principally by the Department of Housing and Urban Development and confined to outlays for housing owned or operated by a public body ("public housing") and to programs designed to provide subsidized housing for low- and moderate-income families (e.g. rent supplements, homeownership and rental housing assistance, rehabilitation grants). Excluded from the series are urban renewal and city demonstration programs as well as mortgage and loan insurance programs and programs providing credit facilities for home-financing institutions.

Total expenditures for other social welfare, series H 28, include, in addition to the programs listed separately, expenditures for child welfare and such miscellaneous social welfare programs as Indian welfare and guidance; aging, juvenile delinquency, and certain manpower activities; anti-poverty programs; and some overall Federal social welfare administrative costs not attributable to specific operating programs. Anti-poverty expenditures include the community action program (except for Headstart, included in education, series H 17–20); migrant workers and VISTA programs; and all administrative expenses of the Office of Economic Opportunity. Data on Federal institutional care represent primarily surplus food for institutions; State and local expenditures include some amounts for anti-poverty programs, foster care, legal assistance to the needy, and the care of transients. Surplus food for schools appears with programs under the National School Lunch and Child Nutrition Acts in series H 31, child nutrition.

See also general note for series H 1–411.

H 32–47. Social welfare expenditures under public programs, by source of funds, 1890–1970.

Source: See source for series H 1–31.

Federal grants-in-aid are classified as expenditures from Federal funds (contrary to the practice in the national income accounts which includes them as expenditures from State and local funds). Benefit payments under the State unemployment insurance programs are classified as expenditures from State funds (in the national income accounts they are classified as Federal expenditures, based on the fact that the State unemployment insurance trust funds are held and invested by the Secretary of the Treasury). Federal grants to the States for the administration of unemployment insurance and the employment service are classified as expenditures from Federal funds as are also the benefits paid under the temporary extended unemployment insurance acts of 1958 and 1961.

H 57–69. Estimated payrolls in employment covered by selected government social insurance programs, 1937–1970.

Source: U.S. Social Security Administration, 1937–1939, unpublished data; 1940–1970, *Social Security Bulletin, Annual Statistical Supplement, 1971,* table 6.

The Bureau of Economic Analysis (formerly Office of Business Economics) is the original source for total earnings and wage and salary disbursements, series H 57–59. The Social Security Administration is the original source for payrolls covered by State and local government retirement systems and by workmen's compensation, series H 64 and H 69. See also text for series H 332–345. Figures for series H 60–63 and H 65–68 are based on reports of the agencies administering the programs specified.

Annual estimates of the number of workers and the amount of payrolls covered by workmen's compensation laws are based on data compiled by the Social Security Administration for certain benchmark years—usually at 4-year intervals. For the intervening years, coverage estimates have been projected on the basis of the percentage change under the unemployment insurance laws, with adjustments, where necessary, for changes in coverage under the two programs. Coverage estimates for the benchmark years are based primarily on payroll data provided by the National Council on Compensation Insurance, the major rate-making organization in the country. The number covered is the average of the number of workers in covered employment in the pay period ending nearest the 15th of each month.

H 70–114. Employee-benefit plans—estimated coverage, contributions, and benefits, 1950–1970.

Source: U.S. Social Security Administration, *Social Security Bulletin,* April 1969, April 1972, and April 1973, and unpublished data.

An "employee-benefit plan," as defined here, is any type of plan sponsored or initiated unilaterally or jointly by employers or employees and providing benefits that stem from the employment relationship and are not underwritten or paid directly by government (Federal, State, or local). In general, the intent is to include plans that provide in an orderly predetermined fashion (1) income maintenance when regular earnings are cut off because of death, accident, sickness, retirement, or unemployment and (2) benefits to meet medical expenses associated with illness or injury.

Government employees who are covered by plans underwritten by nongovernment organizations are included in the series, whether or not the government unit contributes (as an employer) to the financing of the program. Specifically included here are plans providing government employees with group life insurance, accidental death and dismemberment insurance, and hospital, surgical, regular medical, and major-medical expense insurance. Retirement and sick-leave plans for government employees, which are financed and administered directly by government, are excluded from the series.

Estimates of coverage, contributions, and benefits are based primarily on reports of insurers and other nongovernmental bodies. For life insurance, accidental death and dismemberment, and health benefits, major sources are Institute of Life Insurance and Health Insurance Association of America, *Group Insurance Coverages in the United States,* annual issues; Institute of Life Insurance, *Life Insurance Fact Book,* annual issues; reports of Blue Cross Association and the National Association of Blue Shield plans; and reports of self-insured (independent) trade-union, mutual benefit association and company-administered health and life insurance plans. (For further detail regarding health insurance estimates, see *Social Security Bulletin,* "Private Health Insurance in 1972, Health Care Services, Enrollment, and Finance," February 1974.) For temporary disability, data derived mainly from Health Insurance Council, *Extent of Voluntary Coverage in the United States,* annual issues, and unpublished data. (For further detail, see *Social Security Bulletin,* "Cash Benefits for Short-Term Sickness, 1948–1972," January 1974.) For retirement, estimates made by Social Security Administration based on data from Institute of Life Insurance, *Tally,* and *Life Insurance Fact Book,* annual editions, and Securities and Exchange Commission, *Survey of Private Noninsured Pension Plans,* annual issues.

Coverage data are generally based on the number of active participants (those currently employed) and may include in addition persons who have been temporarily laid off or retired. The practice of continuing coverage for a retired worker is particularly prevalent in group life insurance. Many group life and health plans permit a person on layoff to continue coverage in the group for 3 to 6 months, and, in some cases, even longer. In addition, workers who have terminated employment may carry vested pension rights; these persons are often included in the total coverage group. No attempt has been made to correct the coverage data for such limitations. Therefore, the proportion that covered employees represent of all employed workers and that contributions represent of aggregate payrolls have some overstatement. Nevertheless, longrun growth patterns for the various types of plans remain valid.

Employee-benefit plans are now (1970) the predominant way through which most workers and their families obtain basic medical care protection and they provide many services and protections not originally included. The increasing dollar amounts of benefits paid under employee-benefit plans, however, do not necessarily represent real gains—in terms of increased quality of care and adequacy of protection provided—for individual employees. Some of the rise in aggregate expenditures is the result of growth in the number of employees and dependents covered, the increased per unit cost of providing specific services and benefits, and the increased utilization of services.

Measuring the magnitude of real gain in health care benefits is particularly difficult. See Herbert E. Klarman, Dorothy P. Rice, Barbara S. Cooper, and H. Louis Stettler III, *Sources of Increase in Selected Medical Care Expenditures, 1929–1969* (Staff Paper No. 4), Social Security Administration, Office of Research and Statistics, 1970. The extent of utilization of medical and hospital services is influenced by a number of factors such as age distribution of the work force, variations in incidence of sickness, shifts in types of services used, and the tendency for private plans to provide supplemental rather than basic protection to the elderly, as the result of Medicare.

H 115–124. Protection against income loss from short-term sickness, 1948–1970.

Source: U.S. Social Security Administration, *Social Security Bulletin,* January 1974, pp. 20 and 26.

Protection against loss of earnings in periods of nonoccupational disability is provided in a number of ways. For wage and salary workers in private industry, the most common method is through group or individual insurance policies sold by commercial insurance companies that pay cash amounts during specified periods of disability. Employers may also self-insure, providing either cash benefits or paid sick leave. Some unions, union management trust funds, fraternal societies, and mutual benefit associations also pay cash disability benefits. In addition, employers often use a paid-sick-leave plan to supplement benefits under insurance plans, and workers may, as individuals, purchase insurance policies to supplement the protection provided through their jobs. Private insured protection may be obtained through voluntary action by the employer or the employee, or it may come about as the result of compulsory programs. (For discussion of such programs, see source.)

H 125–171. Monthly cash benefits and beneficiaries under social insurance and related programs, by risk and program, 1940–1970.

Source: U.S. Social Security Administration, *Social Security Bulletin, Annual Statistical Supplement, 1971*, and earlier issues.

Lump-sum payments are excluded. Data for workmen's compensation and State and local retirement systems exclude Alaska and Hawaii, 1940–1958; data for other programs include benefits paid and beneficiaries in outlying areas or in other countries for all years.

Most of the data are derived from operating statistics of the administering agencies. For the basis of estimates of workmen's compensation payments, see text for series H 332–345.

Estimates of the operations of State and local government retirement systems, series H 130 and H 155, prior to 1950 are based primarily on the Bureau of the Census *Annual Compendium of State Government Finances* and *Compendium of City Government Finances*. These present fiscal year data (which were averaged to secure calendar year figures) for State-administered and city-administered systems. Data on county-administered systems (not reported, and not many in that period) were estimated by the Social Security Administration.

After 1950 extensive use was made of the 1957, 1962, and 1967 Census of Governments reports, *Employee-Retirement Systems of State and Local Governments*, for benchmark purposes. Beginning 1959, data from the Census Bureau's annual *Finances of Employee-Retirement Systems of State and Local Governments* were used, with certain adjustments through the year 1966 (no adjustments thereafter). Two fiscal years are averaged to approximate calendar year data.

H 172–259. General note.

The national system of old-age, survivors, disability, and health insurance (OASDHI) originally covered employees in industry and commerce. Beginning 1951, coverage was extended to regularly employed agricultural and domestic workers, to most urban self-employed persons, and, on a voluntary group basis, to employees of nonprofit organizations and to employees of State and local governments not covered by separate retirement programs. During the 1950's, coverage was further extended to self-employed farmers and additional farmworkers, to most professional self-employed persons and, on a voluntary basis, to most State and local government employees covered by their own retirement system. As of January 1957, military personnel were covered on a compulsory basis. Free wage credits for military service from September 1940 through December 1956 are reflected in benefits paid during the years covered by the series (primarily in benefits to young survivors) but do not enter into the count of covered workers or taxable earnings. The additional cost of benefits paid as a result of these credits is met by transfers to the trust funds from general revenues. In 1965, self-employed doctors of medicine were covered, and in 1967 the previous elective coverage of ministers became compulsory unless exemption was claimed on grounds of conscience or religious principle.

When the OASDHI program began in 1937, less than 60 percent of all persons who worked in paid employment during an average week were covered. Following the 1950 amendments, the proportion rose to 75 percent and by 1970 was more than 90 percent. Major groups still excluded from coverage are: (1) Workers covered under Federal civilian employee staff retirement systems; (2) most railroad employees; (3) household workers and farmworkers whose earnings are below certain minimum levels; and (4) persons with very low net earnings from self-employment. Federal civil servants and railroad employees are covered, separately, by compulsory, contributory retirement systems of their own. The railroad system is closely coordinated with OASDHI.

A worker may be covered, and receive wage credits toward his benefits, for less than the full amount of his earnings. Contributions were payable only on the first $3,000 earned annually during 1937–1950, the first $3,600 for 1951–1954, $4,200 for 1955–1958, $4,800 for 1959–1965, $6,600 for 1966–1967, and $7,800 for 1968–1970.

Contributions were payable on taxable earnings at the following rates (percent):

Year	*Employer-employee (each)*	*Self-employed*
1937–49	1	–
1950	1.5	–
1951–53	1.5	2.25
1954–56	2	3
1957–58	2.25	3.375
1959	2.5	3.75
1960–61	3	4.5
1962	3.125	4.7
1963–65	3.625	5.4
1966	4.2	6.15
1967–68	4.4	6.4
1969–70	4.8	6.9

– Represents zero.

These rates include disability insurance contributions for 1957–1970 and hospital insurance contributions for 1966–1970.

An employer deducts social security contributions from a worker's pay and adds an equal amount for his tax as employer. The money is forwarded to the Internal Revenue Service and deposited into Federal trust funds from which the benefits and administrative expenses are paid. Self-employed persons pay their social security contributions with their Federal income tax.

To qualify for cash benefits, a worker must have worked a sufficient time in covered employment to have acquired an insured status. Under the 1939 amendments, a worker was generally "fully insured" for benefits if he had worked in covered employment half the time after 1936 and before age 65 and had a minimum of six calendar quarters of coverage. Subsequent liberalizations permitted a person to become fully insured if he had been in covered work roughly equal to one-fourth of the time between 1950 (or age 21, if later) and retirement age or death. If a worker dies before acquiring a fully insured status but is "currently insured"—1½ years employment out of the three years preceding death—survivor benefits may be paid to his young widow with children. To be insured for disability benefits, a worker must generally have worked for at least 5 out of the 10 years before onset of disability.

The 1965 amendments eased the eligibility requirements for persons 72 years old and over who were not eligible for cash benefits by introducing a transitional insured status under which a special flat monthly benefit may be paid to persons with three to five quarters of coverage. A 1966 amendment extended these special monthly benefits to certain persons 72 years old and over who could not meet even these minimal requirements.

Lump-sum payments became payable in 1937, monthly benefits in 1940. The original Social Security Act provided for monthly old-age benefits only. Amendments adopted in 1939 added benefits for dependents and survivors of the insured worker. Benefits for disabled persons were added in 1956, and benefits for the dependents of disabled persons in 1958. Beginning 1966, the cost of rehabilitation services furnished to disability beneficiaries was also paid by the program.

In 1965, a comprehensive health insurance program (Medicare) for persons 65 years old and over was established. The program consists of a compulsory hospital insurance plan covering hospital and related services and a voluntary supplementary medical insurance plan covering physicians' and related medical services. The hospital insurance plan is financed through contributions made while the individual is working (except that Federal general revenues are used to finance the benefits for certain elderly persons who reach retirement age without becoming insured under the Social Security Act). The supplementary medical insurance plan is financed through voluntary contributions by the elderly matched by the Federal Government general revenues.

Each person working in covered employment or self-employment must obtain a social security number, which is used to identify the earnings record from which his benefits are calculated. Benefits are based on the worker's average monthly earnings as computed under the law. For most workers, at present, monthly earnings are averaged over a period of years beginning with 1951, or age 22 if later, up to the year in which the worker reaches age 65 (62 for a woman), becomes disabled, or dies. Generally, the 5 years of lowest earnings are disregarded in computing this average. After the worker's average monthly earnings have been figured, the monthly benefit amount payable at age 65 or upon disablement—the primary insurance amount—is then obtained from a table in the law. Benefits for dependents and survivors are calculated as a percentage of the primary insurance amount.

H 172–185. Old-age, survivors, disability, and health insurance—covered workers, earnings, and selected trust fund transactions, 1937–1970.

Source: U.S. Social Security Administration, *Social Security Bulletin, Annual Statistical Supplement, 1971*, pp. 24, 26, 47, 50–52, 54, 66.

H 260–270. Civil Service retirement, 1921–1970.

Source: U.S. Civil Service Commission, *Civil Service Retirement, Federal Employees Group Life Insurance, Federal Employees Health Benefits, Retired Federal Employees Health Benefits*, various annual issues.

The original retirement act (Public Law 66-215) was signed May 22, 1920, and initially covered about 330,000 employees in the classified civil service. The act provided only for mandatory and disability retirement after 15 years of service with annual annuities ranging from $180 to $720 based on length of service and the average salary for the ten years preceding retirement.

The present retirement law (1973) provides optional retirement on full annuity at age 55 with 30 years service, age 60 with 20 years service, or age 62 with 5 years service; disability retirement is permitted at any age with 5 years service; involuntary retirement at any age after 25 years service or at age 50 with 20 years service. Deferred annuities are payable at age 62 with 5 years service. Mandatory retirement remains age 70 with 15 years service. The average salary is now the highest three years of salary. The annuity formula provides 1½% of average salary for the first 5 years service, 1¾% for the next 5 years, and 2% for any remaining service, up to a maximum of 80% of average salary. Disability annuitants receive the greater of the preceding computation or a guaranteed minimum of 40% of average salary or regular formula using service projected to age 60, whichever is less. The law also contains special eligibility and computation requirements for certain hazardous duty positions and for legislative branch employees.

The major provisions under various laws follow:

Law and effective date	Age-service requirements to receive annuity				
	Optional	Disability	Involuntary	Deferred	Mandatory
1920 8–20–20	No provision	Any-15	No provision	No provision	70–15 65–15[1] 62–15[1]
1930 7–1–30	68–30 63–30[1] 60–30[1]	Any-5	55–15[2] (1922 Act)	No provision	Same
1942 1–24–42	62–15 60–30 55–30[2]	Any–5	62–5 55–5[2]	Any-5 (Payable at 62)[2]	70–15
1948 4–1–48	Same	Any-5	Any-25[2]	Same	70–15
1956 10–1–56	62–5 60–30 55–30[2]	Any-5	Any-25[2] 50–20[2]	Same	70–15
1962 10–12–62	Same	Any-5	Same	Same	70–15
1969 10–20–69	62–5 60–20 55–30 (1966 Act)	Any-5	Same	Same	70–15

[1] Limited to occupations involving overseas or arduous duty.
[2] Annuity reduced for age.

Law	Employee contribution as percent of pay	General formula	Average salary for—	Survivor benefit election	Average annual annuity for issues in year following enactment	Estimated number of employees covered
1920	2½	30 to 60% of salary by schedule	10 years	No provision	$568	330,000
1930	3½	$30 x service plus amount purchasable from contributions, various maxima and minima	5 years	No provision	952	415,000
1942	5	Same, plus minimum 1/70 x salary x service (maximum 35 years)	5 years	Election by retiree [1] (1939 law)	986	2,000,000 (3,000,000 in 1944)
1948	6	1½% x salary x service or (1% x salary + $25) x service. Maximum 80% of salary	5 years	Widow and children	1,121	1,735,000
1956	6½	Same, but 1¾% for 5–10 years and 2% for 10 years and over	5 years	Same but deferred could elect	1,920	2,133,000
1962	6½	Same	5 years	Same	2,700	2,300,000
1969	7	Same	3 years	Same	4,920	2,700,000

[1] Public Law 85–465 provided benefits to widows whose husbands had died before February 29, 1948, since the law before that time did not provide a liberal survivor benefit.

The number of annuities certified refers to the number of employee and survivor annuitants added to the roll during the year. The number terminated refers to the employee and survivor annuitants dropped from the roll during the year; it is derived by adding the prior year "number in force" to the current year "number certified" and subtracting the current year "number in force." The number in force represents total employee and survivor annuitants in active annuity status as of June 30. The annual value is the average monthly annuity as of June 30 projected to an annual basis.

Lump-sum payments or refunds are paid to persons leaving the Federal service and withdrawing contributions and to survivors of deceased employees and of deceased annuitants. In the case of deceased employees with no survivor annuity payable, accumulated deductions (contributions) are paid. In the case of deceased annuitants whose annuity paid has not equaled contributions, the unexpended balance is paid.

H 271–286. Railroad retirement benefits—number and amount, by type of beneficiary, 1937–1970.

Source: U.S. Railroad Retirement Board, *Annual Report*, 1950, 1960, and 1971 editions, and unpublished data.

The social insurance programs administered by the Railroad Retirement Board cover employees of railroads and of companies and organizations affiliated with railroad transportation. The Railroad Retirement Act provides retirement annuities for aged and disabled workers and for wives of retired employees, and benefits to survivors of deceased workers. Wage credits of workers with less than 10 years of railroading are transferred to, and counted with, social security covered employment at retirement. Supplemental annuities have also been provided for career employees since 1966. In addition, Federal health insurance protection is available to railroad workers on the same basis as to workers covered by social security. Funds for the regular railroad retirement and survivor benefit program come primarily from a tax, divided equally between employer and employee, on specified amounts of earnings, which have varied over time.

For a review of amendment activities, employer and employee contributions, benefit adjustments, etc., see source.

H 287–304. Private pension and deferred profit-sharing plans—estimated coverage, contributions, reserves, beneficiaries, and benefit payments, 1930–1970.

Source: U.S. Social Security Administration, *Social Security Bulletin*, March 1959, p. 12; April 1966, p. 11; and April 1972, p. 20.

These series were compiled by the Social Security Administration from releases of the Institute of Life Insurance, Securities and Exchange Commission, Department of Labor, and Internal Revenue Service, supplemented by various other reports, such as those of nonprofit organizations and the annual statements of the leading life insurance companies writing group annuities. Information was also received from various industrial concerns. In addition, for the earlier years, M. W. Latimer's studies were utilized (see M. W. Latimer, *Industrial Pension Systems in the United States and Canada*, Industrial Relations Counselors, Inc., New York, 1932).

These series present estimates with respect to formal private pension and deferred profit-sharing plans. Included are plans covering employees of industrial and nonprofit organizations. Most of them are funded although some of the noninsured plans are on a pay-as-you-go basis. The majority are single-employer plans with an increasing number of industry- or area-wide multiemployer plans.

Under insured plans, insurance carriers are the medium through which benefits are provided; sponsors of the plans pay premiums to these carriers. Under noninsured plans, the sponsors themselves perform the functions of insurance carriers.

Series H 287–289 exclude annuitants and potential members who have not yet met the entrance requirements (age and/or service). Employees under both insured and noninsured plans are included only once—under the insured plans. The larger groups under insured plans are covered by group annuity contracts, whereas individual-policy pension trusts cover smaller groups.

Contributions to insured plans, series H 291 and H 294, are on a net basis with dividends and refunds deducted. Those of noninsured plans, series H 292 and H 295, are for the most part on a gross basis, refunds appearing as benefit payments. For pay-as-you-go plans, contributions have been assumed to equal benefit payments.

Reserves for insured plans, series H 297, were furnished by the Institute of Life Insurance. Reserves for noninsured plans, series H 298, include those of corporate pension plans, obtained from releases of the Securities and Exchange Commission; to these were added estimated reserves of noninsured nonprofit organization and multiemployer plans.

The number of beneficiaries, series H 299–301, relate to those in receipt of periodic payments at the end of the year, thus excluding those receiving lump sums during the year. Payments under insured plans, series H 303, are net amounts. Payments for the noninsured plans, series H 304, were obtained by adding to the Securities and Exchange Commission data the estimated payments under formal pay-as-you-go plans and under noninsured multiemployer and nonprofit organization plans. The data from SEC include lump sums and refunds from corporate pension funds (types not segregated). Therefore, dividing the payments of the year by the mean number of beneficiaries results in an overstatement of the average annual periodic payment.

H 305–317. Unemployment insurance—coverage, benefits, and financing under State programs, 1941–1970.

Source: U.S. Manpower Administration, monthly *Unemployment Insurance Statistics*, and quarterly *Employment and Wages*.

Most of these series also appear in the *Social Security Bulletin, Annual Statistical Supplement*. Data relate only to State programs under Title IX of the Social Security Act. Note that data in series H 1–171 include, in addition, the railroad unemployment insurance system, unemployment allowances for veterans, reconversion unemployment benefits for seamen, and unemployment benefits for Federal employees paid by the States as agents of the Federal Government.

In all States, covered employment represents employment in industrial and commercial establishments of 8 or more for 1941–1955, and 4 or more for 1956–1970 (coverage required under the Federal statute); in some States, covered employment also represents employment in smaller establishments and employment for additional groups of workers, such as State and local employees or seamen. Taxable wages, which are that part of wages subject to the State unemployment insurance tax, and the contributions paid on such wages are also reported on quarterly contribution reports from covered employers. An employer pays contributions on only the first $3,000 of an employee's annual wage in all but 22 States. The limit is $3,300 in Tennessee; $3,600 in Arizona, Connecticut, Delaware, Idaho, Massachusetts, Michigan, New Jersey, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, Wisconsin, and Wyoming; $3,800 in California, North Dakota, and Nevada; $4,200 in Utah; $4,800 in Minnesota; $5,500 in Hawaii; and $7,200 in Alaska. Workers' contributions are included in the data for States whose laws provide for such contributions. Contributions payable by employers to the Federal Government (0.4 percent of taxable wages), and used primarily for Federal grants to the States for the cost of administering unemployment insurance and employment services, are not included in these series. Employer contributions to States for unemployment insurance vary in rate depending on the individual employer's experience (in earlier years not all States permitted variable rates), ranging generally from 0.1 percent or less to 4.0 percent or more of taxable payrolls. In 1941, 5 States also collected contributions for this program from employees; by 1970, only Alabama, Alaska, and New Jersey did so.

In most States, a waiting period of 1 week must be served before payments begin. Benefits are payable for a maximum number of weeks, ranging from 20 to 36 weeks among the States; maximum weekly benefits without dependents' allowances range from $40 to $86 under the several State laws. In 11 States, maximum allowances for dependents ranging from $12 to $38 raise the range of maximum augmented benefits to $65 to $114.

H 318–331. Railroad unemployment insurance benefits, 1940–1970.

Source: See source for series H 271–286.

The Railroad Unemployment Insurance Act provides benefits for unemployment and sickness financed by contributions from covered employers.

For a review of amendment activities, contributions, benefit adjustments, etc., see source.

H 332–345. Workmen's compensation—payments, by type of benefit and type of insurance, 1939–1970.

Source: U.S. Social Security Administration, 1939–1967, *Social Security Bulletin*, October 1970; 1968–1970, *Social Security Bulletin*, January issues.

The figures include estimated payments under State workmen's compensation laws (46 States in 1939; 48 States, 1948–1957; 50 States, 1959–1970) and under Federal workmen's compensation laws covering employees of the Federal Government, private employees in the District of Columbia, and longshoremen and harbor workers. Beginning 1970, includes the Federal "Black Lung" benefits program for disabled coal miners and their dependents. Most of the State workmen's compensation laws exempt employment in agriculture, domestic service, and casual labor; about half exempt employers who have fewer than a specified number of employees. Occupational diseases, or at least specified diseases, are compensable under all laws. To make certain that benefit payments will be made when due, the covered employer is required by law to obtain insurance from a private insurance carrier, from a State insurance fund, or to give proof of his qualifications to carry his own risk, which is known as self-insurance.

Estimates of workmen's compensation payments depend on a variety of sources of published information, supplemented by correspondence with State agencies. Data on payments by private insurance companies and some of the competitive State funds are obtained from annual issues of *Spectator: Insurance by States of Fire, Marine, Casualty, Surety and Miscellaneous Lines* and from the A. M. Best Company. Data on payments made by the remaining State funds are obtained from annual or biennial reports issued by State Workmen's Compensation Bureaus or Divisions, or State Insurance Departments, and from the annual publication of the Bureau of the Census, *State Government Finances*. Data on payments by self-insurers in some States are obtained directly from State reports. For most States, however, estimates are calculated using one of several ratios (e.g., reported accidents, claims filed, taxes paid, etc.) that exist between firms which are insured with private carriers, or State funds, and firms which self-insure.

See also text for series H 57–69 and for series B 256.

H 346–367. Public assistance—payments, recipients, and average monthly payments, 1936–1970.

Source: U.S. Social Security Administration, *Social Security Bulletin, Annual Statistical Supplement, 1971*, tables 143 and 145. Data from U.S. Social and Rehabilitation Service.

Assistance programs financed in part by Federal grants-in-aid were in effect on a State-wide basis in 1936 in 42 States for old-age assistance, 27 States for aid to dependent children, and 25 States for aid to the blind. Programs have been in effect in the 48 conterminous States and the District of Columbia beginning 1938 for old-age assistance, 1955 for aid to dependent children, and 1953 for aid to the blind. Approval of the first plans for aid to the permanently and totally disabled was effective October 1950 and, in 1957, 44 States and the District of Columbia were participating. Assistance payments for all above programs are still financed in part from Federal funds and, with the exception of Nevada (aid to the permanently and totally disabled), these programs are currently in effect in all 50 States, the District of Columbia, Guam, Puerto Rico, and Virgin Islands. General assistance, provided from State or local funds or both, is available to certain other categories of needy persons in all 54 jurisdictions. See also text for series B 255.

H 368–375. Emergency public assistance and Federal work programs—recipients and assistance, 1933–1943.

Source: See source for series H 346–367, various issues.

The estimates shown here for 1933–1939 are very similar to those in the National Resources Planning Board report on *Security, Work, and Relief Policies*, 1942, appendixes 9 and 10.

See also text for series H 1–31 and H 32–47.

H 376–381. Old-age assistance recipients and insurance beneficiaries per 1,000 population 65 years old and over; and children receiving aid, and child insurance beneficiaries per 1,000 population under age 18, 1936–1970.

Source: U.S. Social and Rehabilitation Service, **series H 380,** *Trend Report, A-4;* **series H 376–379** and **H 381,** *Concurrent Receipt of Public Assistance Money Payments and OASDHI Cash Benefits by Persons Aged 65 or Over* (G-2).

H 382-391. Services under public child health and welfare service programs, 1937-1970.

Source: **Series H 382-389,** 1937-1969, U.S. Children's Bureau, *Statistical Series,* and U.S. Social Security Administration, unpublished data; 1970, U.S. Health Services Administration, unpublished data; **series H 390-391,** U.S. Social and Rehabilitation Service, *Child Welfare Statistics, 1969,* and *Children Served by Public Welfare Agencies and Voluntary Child Welfare Agencies and Institutions,* Report CW-1 and E-9.

H 392-397. Vocational rehabilitation—caseload and expenditures, 1921-1970.

Source: U.S. Social and Rehabilitation Service, *Caseload Statistics of State Vocational Rehabilitation Agencies in Fiscal Years and State Vocational Rehabilitation Agency Program Data in Fiscal Years,* annual issues.

Vocational rehabilitation of the disabled is defined as the restoration, preservation, or development of the ability to function in productive activity. The rehabilitation services provided by State agencies with matching State and Federal funds include medical restoration, training, guidance, and placement services.

Eligibility of an individual for vocational rehabilitation services requires that all three of the following conditions be shown to exist: (a) The presence of a physical or mental disability; (b) the existence of a substantial handicap to employment; and (c) a reasonable expectation that vocational rehabilitation services may render the individual fit to engage in a gainful occupation. For a detailed discussion of these conditions, see *An Introduction to the Vocational Rehabilitation Process,* prepared by John F. McGowan and Thomas L. Porter, 1967.

H 398-411. Private philanthropy—estimated fund flows, by donors and recipients, 1929-1970.

Source: Ralph L. Nelson, Professor of Economics, Queens College of the City University of New York, 1973.

The estimates shown here differ from those presented in the *Statistical Abstract of the United States* (1973 edition, table 510). Reasons for the differences include differences in estimating procedures, definition and scope of particular categories, and the need to make projections. The source of the *Statistical Abstract* table is American Association of Fund-Raising Counsel, Inc., New York, *Giving USA.* In the annual *Giving USA,* the objective is to present contemporary estimates, which requires projection of historical data. According to Nelson, his estimates reflect a greater opportunity to use historical benchmarks and the availability of the time and research resources required to handle more thoroughly problems of data refinement and estimation.

H 399, living donors. 1929-1954, based on C. Harry Kohn, *Personal Deductions in the Federal Income Tax,* Princeton University Press, 1960, table 17, p. 66; 1955-1967, based on unpublished memoranda prepared for the Carnegie Corporation by Nelson; 1968-1970, estimates prepared for the Commission on Private Philanthropy and Public Needs, also by Nelson. All estimates originally based on contributions itemized on personal income tax returns as tabulated in U.S. Internal Revenue Service, *Statistics of Income: Individual Income Tax Returns.* Base figures, adjusted for overreporting of contributions, were increased by estimates of the contributions of individuals and families using the standard deduction or not required to file a return.

H 400, charitable bequests. Based on charitable bequests reported on estate tax returns as tabulated in U.S. Internal Revenue Service, *Statistics of Income: Estate and Gift Tax Returns.* For years in which no tabulations were made, estimates were based on linear interpolation between years for which tabulations were available.

H 401, corporation contributions. Based on contributions reported on corporation income tax returns as tabulated in U.S. Internal Revenue Service, *Statistics of Income: Corporation Income Tax Returns,* not adjusted for contribution flows through company-sponsored foundations. For such adjustment, see Ralph L. Nelson, *Economic Factors in the Growth of Corporation Giving,* National Bureau of Economic Research and Russell Sage Foundation, New York, 1970, chapter 4.

H 402, foundation grants. Based on editions 1 through 5 of *The Foundation Directory,* Russell Sage Foundation, 1960, 1964, 1967, and the Foundation Center, 1971 and 1975, New York; U.S. Department of the Treasury, *Treasury Department Report on Private Foundations,* 1965; Ralph L. Nelson "Estimates of Balance Sheets and Income Statements of Foundations and Colleges and Universities," supplementary vol. I of *Institutional Investor Study Report of the Securities and Exchange Commission,* 1965, Appendix A-III; Nelson, *The Investment Policies of Foundations,* Russell Sage Foundation, New York, 1967, chapter 2; Nelson, *Private Giving in the American Economy, 1960-1972,* Commission on Private Philanthropy and Public Needs (forthcoming).

H 403, higher education endowment income. For 1950-1970, estimates based on U.S. Office of Education, *Biennial Survey of Higher Education* (biennial 1951-52 through 1963-64, annual survey thereafter). See also Nelson, "Estimates of Balance Sheets and Income Statements . . . of Colleges and Universities," cited above.

H 404, hospitals endowment income. Based on data on the capital funds of voluntary short term hospitals as reported by the American Hospital Association. A current investment return (rate of interest) was applied to the capital funds to obtain a measure of investment income.

H 406 and **H 407,** religious organizations and parochial schools. For description of data sources, estimation procedures, and 1929-1959 estimates, see Frank G. Dickinson, *The Changing Position of Philanthropy in the American Economy,* National Bureau of Economic Research, New York, 1970, chapter 3. 1960-1970 estimates (and also 1929-1959) prepared by Ralph L. Nelson for Carnegie Corporation and for Commission on Private Philanthropy and Public Needs.

H 408, higher education. See source note for series H 403. The Council on Financial Aid to Education also has published survey data on giving to higher education since the 1954-55 academic year.

H 409, hospitals and health. Based on estimates made by Research and Statistics staff of U.S. Social Security Administration and published in *Social Security Bulletin* and on estimates made by the American Association of Fund Raising Counsel and published in *Giving USA.* These estimates were verified for general trend from a variety of data sources (federated campaign allocations, national health agencies, church benevolences distributions, etc.).

H 410, youth services, welfare, race relations. This has been the most profoundly changing category over this 4-decade period, reflecting changing social needs, government programs, and support patterns. Many sources of information were used, the most comprehensive being "Expenditures from public and private funds for organized income maintenance and welfare service programs" presented in the *Social Security Bulletin.*

H 411, other. Includes philanthropic receipts of (1) independent nonsectarian primary and secondary schools, (2) church foreign missions and private foreign relief, (3) foundations' net endowment increase, project and administrative expense, (4) civic and cultural support, and (5) charity raffles.

Series H 1–31. Social Welfare Expenditures Under Public Programs: 1890 to 1970

[In millions of dollars. Years ending June 30 for Federal Government, most States, and some localities]

Year	Total expenditures				Social insurance									Public aid		Health and medical programs
	Total	Percent of gross national product	Percent of all government expenditures [1]	Per capita (actual prices)	Total	Old-age, survivors, disability, and health insurance	Railroad retirement	Public employee retirement	Unemployment insurance and employment services	Railroad unemployment insurance	Railroad temporary disability insurance	State temporary disability insurance	Workmen's compensation	Total	Public assistance

Z Less than $500,000. [1] Government expenditures exclude workmen's compensation and temporary disability insurance payments made through private insurance carriers and self-insurers, although these (payable under statutory provisions) are included as social welfare expenditures, series H 1. [2] Not computed. [3] "Public aid" included with "Other social welfare." [4] Includes administrative costs and research, not shown separately. [5] Includes child welfare, anti-poverty programs, and miscellaneous social welfare expenditures, not shown separately.

* Denotes first year for which figures include Alaska and Hawaii. [1] Bureau of the Census total of persons 14 years old and over (16 and over, beginning December 1967) in the civilian labor force; includes unpaid family members and the unemployed, not shown separately. [2] Beginning 1955, includes persons covered under both a government retirement system and OASDHI (about 5.3 million in December 1970); excludes persons whose coverage was authorized on an elective or optional basis but not in effect (about 3.5 million in December 1970); also excludes railroad employees jointly covered by OASDHI and their own retirement program. [3] Excludes persons covered under both a government retirement system and OASDHI; see footnote 2. [4] State, railroad, and Federal employee programs. [5] State and railroad programs. Excludes government employees covered by sick-leave provisions.

Series H 57–69. Estimated Payrolls in Employment Covered by Selected Government Social Insurance Programs: 1937 to 1970

[In millions of dollars. Conterminous United States, except as noted. Earnings and payroll data are gross, before deduction of social insurance contributions]

Year	Total earnings [1]	Wages and salaries [2]		Payrolls in employment covered by retirement programs					Net earnings of self-employed covered by OASDHI [8]	Payrolls in employment covered by unemployment insurance programs			Payrolls in employment covered by workmen's compensation program [10]

* Denotes first year for which figures include Alaska and Hawaii. NA Not available. [1] Includes earnings of self-employed. [2] Wage and salary disbursements paid in cash and in kind. Includes pay of Federal personnel (civilian and military) in all areas. [3] Beginning 1953, adjusted for duplication of payrolls covered by both OASDHI and State and local retirement systems. [4] Taxable plus estimated non-taxable wages and salaries in employment covered by programs. [5] Beginning 1957, includes Armed Forces in all areas. [6] Includes a small amount of taxable wages for Alaska and Hawaii, all years. [7] Includes Alaska and Hawaii, all years. [8] Old-age, survivors, disability, and health insurance. [9] Beginning 1955, includes payrolls of Federal civilian employees in all areas. [10] Payrolls of employers insuring with private carriers, State funds, or self-insured, and Federal programs; excludes railroads (covered by Employers' Liability Act). [11] Excludes earnings under work relief programs.

Z Less than 50,000 or less than 0.05 percent.

[1] Includes group and wholesale life insurance but excludes Servicemen's Group Life Insurance program.

[2] Includes persons covered by group comprehensive major-medical insurance as well as those with basic benefits.

[3] Includes private hospital plans written in compliance with State temporary disability insurance law in California.

[4] Group supplementary and comprehensive major-medical insurance written by commercial insurance companies.

[5] Includes private plans written in compliance with State temporary disability insurance laws in California, New Jersey, and New York, and formal sick-leave plans, but excludes credit accident and health insurance. Starting with 1966, temporary disability coverage estimates exclude long-term disability policies.

[6] Includes pay-as-you-go and deferred profit-sharing plans, plans for non-profit organizations, union pension plans, and railroad plans supplementing the Federal railroad retirement program. Excludes plans for the self-employed. Retirement coverage estimates exclude annuitants.

[7] Includes data for supplemental unemployment insurance benefits, not shown separately.

Z Less than $500,000 or less than 50 beneficiaries. [1] Old-age, survivors, disability, and health insurance. [2] Includes Federal civil service and other contributory systems and Federal noncontributory systems. Prior to 1954, retirement data include unknown amount and number of disability and survivor payments. [3] Retirement data are for veterans of the Civil War, the Indian Wars, the Spanish-American War, the Boxer Rebellion, and the Philippine Insurrection; beginning October 1951, includes all service pensions. Disability data include pensions and compensation, and subsistence payments to disabled veterans undergoing training. Survivor data include special allowances for survivors of veterans who did not qualify under OASDHI. [4] Cash benefits payable in Calif., N. J., N. Y., R. I. and P. R., under public and private plans. Beneficiary data exclude private-plan beneficiaries in N.J. [5] Small but unknown amount of lump-sum death payments included with monthly survivor payments. [6] Beginning 1962, includes training allowances not shown separately. [7] Includes payments made by the States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958 and payments under extended unemployment insurance programs; beginning 1961, includes program in P. R. and also payments under the Automotive Products Trade Act of 1965 and the Trade Expansion Act of 1962, from January 1970. [8] Under the Servicemen's Readjustment Act of 1944 (terminated July 1949) and the Veterans' Readjustment Assistance Act of 1952 (terminated January 1960). Amount but not number includes self-employment allowances. [9] For OASDHI, average monthly number; for the railroad retirement program, public employee retirement systems, and the veterans' programs, number on rolls June 30; for State unemployment and temporary disability insurance and for veterans' unemployment allowances, average weekly number; for railroad unemployment and temporary disability insurance, average number during 14-day registration period. Beneficiary data for workmen's compensation not available. [10] For Federal military retirement programs and for State and local government retirement systems, number represents families.

[1] Estimated number of persons who had covered employment at any time during the period 1937 to year shown; not adjusted to reflect effect of (a) provisions that coordinate the OASDHI and railroad retirement programs and (b) wage credits for military service. Only partially adjusted to eliminate duplicate count of persons with taxable earnings reported on more than 1 account number; effect of such duplication is substantially less significant for the insured than for the uninsured.

[2] Fully or currently insured.

[3] Workers with first taxable earnings under program in specified year. There have been 166.3 million different persons reported with taxable earnings during 1937–70.

[4] Relates to wage and salary workers for 1937–50. Beginning 1951, includes self-employment.

[5] Total earnings in covered employment, including estimated amounts above the taxable limit.

[6] Beginning 1951, includes reported taxable net earnings of self-employed persons; amount taxable may not exceed amounts specified above from a combination of wages and self-employed earnings.

[7] Preliminary estimate.

[8] Includes insurance contributions of employers, employees, and self-employed, adjusted for refunds, and transfers from general funds to meet cost arising from non-contributory military wage credits, special age-72 cash benefits, and hospital insurance coverage of elderly persons not insured for cash benefits. Includes premiums paid by enrollees for supplementary medical insurance and Federal matching funds.

[9] Starting 1966, includes hospital and medical insurance benefits under Medicare and rehabilitation services.

[10] Before 1940, represents operations of old-age reserve account.

* Denotes first year for which figures include Alaska and Hawaii.

[1] Includes railroad employees and all persons covered by Federal law except those on a group-elective or individual voluntary basis for whom coverage has not been arranged.

[2] Estimates based on number expected to report earnings at end of year.

[3] Farmworkers, self-employed farmers, State and local government employees, employees of nonprofit organizations, and some additional small groups.

[4] Persons whose coverage was authorized but not arranged on a group-elective or individual voluntary basis.

Series H 197–208. Old-Age, Survivors, Disability, and Health Insurance—Number of Monthly Cash Benefits, by Type of Beneficiary: 1940 to 1970

[In thousands. Number in current payment status at end of year. Data contain some duplication arising from dual entitlement]

[1] Beginning 1966, includes special age-72 beneficiaries, not shown separately. [2] Persons aged 65 and over (and 62–64, beginning 1956 for women and 1961 for men). [3] July 1957–Oct. 1960, disabled workers aged 50–64; thereafter, disabled workers under 65. [4] Beginning 1950, includes wife beneficiaries under age 65 with entitled children in their care and, beginning Sept. 1965, entitled divorced wives.

[5] Beginning Sept. 1965, includes widows, 60–61, and surviving divorced wives, 60 and over, and, beginning Mar. 1968, disabled widows and widowers, 50 and over. [6] Beginning 1957, includes disabled persons aged 18 and over whose disability began before age 18 and, beginning Jan. 1965, entitled full-time students aged 18–21. [7] Beginning 1950, includes surviving divorced mothers with entitled children in care.

Z Less than 500 or less than $500,000.

[1] Benefits awarded refers to favorable action on application for monthly benefits or for lump-sum death payments. They include supplemental annuities.

[2] Refers to benefit payments actually being made during period stated.

Series H 287–304. Private Pension and Deferred Profit-Sharing Plans—Estimated Coverage, Contributions, Reserves, Beneficiaries, and Benefit Payments: 1930 to 1970

[Includes pay-as-you-go plans, nonprofit organization plans, multiemployer, union-administered, and deferred profit-sharing plans. Excludes railroad plans other than those supplementing Federal Railroad Retirement Act. In 1930 and 1935, respectively, private railroad plans covered an average of 1.3 and 1.1 million employees; had about 50,000 and 60,000 beneficiaries; and paid about $30 million and $40 million in benefits]

[1] Before 1945, average of workers in last pay period of each type (weekly, semimonthly, etc.) ending within the month; thereafter, ending nearest 15th of each month. Beginning January 1964, represents the number of workers earning wages during the pay period including the 12th of the month. Includes Puerto Rico beginning Jan. 1961.
[2] Includes initial transitional claims. [3] For total unemployment; includes dependents' allowance. [4] Based on date final payments were issued. [5] Excludes Wisconsin prior to 1964; in addition, excludes data as follows: 1941, for 5 States; 1942–1943, 3 States; 1944, 7 States; 1945, 11 States; 1948–1949, 1 State. [6] Excludes reconversion unemployment benefits for seamen from 1947–1950. [7] Includes contributions, penalties, and interest from employers; employee contributions in States which tax workers; and $40.6 million deposited by Federal Government in 1938 to trust funds of 15 States, representing payroll taxes collected by the former in 1936. [8] Wages subject to State unemployment insurance taxes. [9] Funds available for benefits. Excludes transfers to: Railroad unemployment insurance program, $8 million in 1941; to States' temporary disability funds, $200,000 in 1946, $15 million in 1947, and $64 million in 1948. Includes, in 1955, $3 million advance to Alaska from Federal account in Unemployment Insurance Trust Fund, which advance was repaid in Dec. 1956. Includes $33.4 million allocation to the States in July 1956, based on 1955 taxable wages (Employment Security Administrative Financing Act of 1954). [10] Excludes Jan.-Mar. 1948 data for all States. [11] Excludes Indiana, Wisconsin, and Wyoming in 1941–1943; Wisconsin and Wyoming in 1944; and Wisconsin in January-November 1945.

Series H 318–331. Railroad Unemployment Insurance Benefits: 1940 to 1970

[In thousands, except as indicated. For years ending June 30. Covers program activities during year regardless of when unemployment or sickness occurred. Average payments for 2-week claim period and number of beneficiaries based on sample]

Year	Unemployment benefits							Sickness benefits [2]						
	Applications received	Claims received	Beneficiaries	Accounts exhausted	Benefit payments, number [1]	Total payments ($1,000)	Average payment	Applications received	Claims received	Beneficiaries	Accounts exhausted	Benefit payments, number [1]	Total payments ($1,000)	Average payment

* Denotes first year for which figures include Alaska and Hawaii.

[1] Net cash and medical benefits paid under standard workmen's compensation policies.

[2] Net cash and medical benefits paid by State funds, and Federal workmen's compensation programs; and starting 1970, cash benefits paid by Federal black lung program. Data for fiscal years for some funds.

[3] Cash and medical benefits paid by self-insurers, plus value of medical benefits paid by employers carrying workmen's compensation policies that exclude standard medical coverage. Estimated from available State data.

[4] Premiums written by private carriers and State funds, and benefits paid by self-insurers increased 5–10 percent to allow for administrative costs. Also includes benefits paid and administrative costs of Federal system for government employees.

Series H 346-367. Public Assistance—Payments, Recipients, and Average Monthly Payments: 1936 to 1970

[As of December. Through 1942, conterminous U.S. only; thereafter, data include Alaska and Hawaii; beginning 1950, Puerto Rico and Virgin Islands; beginning 1959, Guam]

Year	Payments for year [1] (mil. dol.)									Number of recipients (1,000)

– Represents zero. [1] Beginning 1950, includes vendor payments for medical care. [2] Local included with State. [3] Children and one or both parents or one adult caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance; before 1950, partly estimated. [4] Data incomplete.

NA Not available.

[1] General coverage of State reports: 1937–1947, services administered or financed in whole or in part by official State agencies under the Social Security Act; 1948–1949, services provided or purchased by official State agencies exclusive of prediagnostic services; 1950–1956, "physician's services" consisting of clinic service, hospital care, convalescent home care, and other services by physicians. Data for 1937 are for 45 States, the District of Columbia, Alaska, Hawaii (Georgia, Louisiana, Oregon not participating); for 1938, Georgia and Oregon also included and, for 1939, Louisiana as well (except for first quarter). Puerto Rico excluded beginning with the last half of 1940, and Virgin Islands beginning the last half of 1947; prior to these dates they were included. Arizona, which did not participate 1950–1956, excluded for these years. Rates for each year are based on the population of States participating in those years.

[2] Includes services administered or supervised by official State health agencies. Reports were received each year except 1941 from 48 States, the District of Columbia, Alaska, and Hawaii. Missouri was not participating in 1941. Puerto Rico is included beginning with 1940, and the Virgin Islands beginning with the last half of 1947.

[3] Prior to 1956, antepartum service only.

[4] Through 1964, data on calendar year basis; beginning 1966, on fiscal year basis. Data for 1965 omitted.

[5] Rates not computed.

[6] Beginning 1956, rates no longer computed as older children are included.

Series H 392–397. Vocational Rehabilitation—Caseload and Expenditures: 1921 to 1970

[Expenditures in thousands of dollars. For years ending June 30. Includes Puerto Rico, Guam, and Virgin Islands]

Chapter H

Education (Series H 412-787)

H 412–787. General note.

Nationwide statistics on education have been collected and published primarily by the U.S. Office of Education and the U.S. Bureau of the Census. Data on education have also been collected and published by other Federal and State and local governmental agencies, and by independent research organizations.

The Office of Education generally obtains data from reports of State and local school systems and institutions of higher learning. These data relate to school enrollment and attendance, graduates, instructional staff, curricula, school district organization, receipts, and expenditures for elementary and secondary schools, and enrollment, faculty, degrees conferred, income, expenditures, property, and plant fund operations for institutions of higher education.

Data from the Bureau of the Census are obtained through household interviews in decennial censuses and current sample surveys, and relate essentially to school enrollment, literacy, and educational attainment of the general population.

H 412–601. General note.

The Office of Education has issued statistical reports on elementary and secondary education since 1870. For 1870–1917, statistics were included as part of the *Annual Report of the United States Commissioner of Education*. From 1918–1958, a report had been issued for each even-numbered school year under the title, *Biennial Survey of Education in the United States*. Chapter 1 of the *Biennial Survey*, "Statistical Summary of Education," and chapter 2, "Statistics of State School Systems," are primary sources for some derived measures relating to education. Beginning with 1941 and ending with 1951, chapter 2 was supplemented by an abridged report issued as a circular for each odd-numbered school year. Data from the odd-year biennial circulars have not been included in the present compilation. Biennial survey data are based on report forms completed by State departments of education (a copy of the report form appears in the *Biennial Survey* of 1952–1954). Beginning with the *Biennial Survey* of 1952–1954, these forms have been completed by education officials in accordance with detailed instructions contained in the Office of Education, *Handbook I, the Common Core of State Educational Information*. Prior to that date, the forms were completed in accordance with various circulars of information distributed by the Office of Education. Since 1962, the annual publication, *Digest of Educational Statistics*, has provided an abstract of statistical information covering the broad field of American education from kindergarten through the graduate school. The *Digest* utilizes materials from numerous sources, including the statistical surveys and estimates of the Office of Education and other appropriate agencies, both governmental and nongovernmental. It is divided into five chapters: (1) All levels of education; (2) elementary and secondary education; (3) higher education; (4) Federal programs of education; and (5) selected statistics related to education in the United States.

One of the major factors in presenting accurate statistical data on a national basis is the uniformity with which all recording units use standard terms, definitions, and procedures. Prior to 1909, this was controlled only by definitions on the questionnaires requesting information. Since 1909, the Office of Education in cooperation with other national and State organizations has improved uniform recording and reporting through the means of national committees, publications, and national and regional conferences.

A major problem in the collection and processing of comprehensive nationwide school statistics is that of getting all the schools to respond within reasonable time limits. The school authorities are not compelled to report to the Office of Education. There is some evidence that the proportion of schools reporting has increased through the years. This increase is most evident in the data for secondary schools. Prior to 1930, a complete list of public secondary day schools had not been compiled, and consequently there is no way to measure the degree of response in the earlier years. In 1930, there were 23,930 public secondary day schools on file, and reports were received from 22,237. In 1938, the number of schools on file increased to 25,308, and the number reporting was 25,091. In 1952, there were 23,757 schools, and replies were received from all but 12 schools. The data for the missing schools were estimated, and the published totals for 1952 cover all public secondary day schools.

Since 1870, there have been both major and minor changes in the collection patterns with changes in the administration of the program. Some patterns lasted for many years. With voluntary response and no field service (until 1924), response rates varied in their completeness for both reporting in general and for specific items. The completeness of the coverage is not always made evident in the publication. Field service supplemented returns by mail for the 1923–1924 biennial chapters. Visits were made to State departments of education and colleges and universities to complete the coverage from basic or secondary records that were available in the State departments of education or at individual schools and institutions. The introduction of sampling in recent years has also insured adequate coverage.

The data in these historical tables will not always agree with similar data in the publications cited as sources for a specific year because tabulations were "kept open" for many years and as data came in they were added and reflected in future historical tables.

H 412–432. Kindergarten, elementary, and secondary schools and enrollment, 1870–1970.

Ferriss, *Indicators of Trends in American Education*, appendix A and C, © Russell Sage Foundation, New York, 1969, reprinted with permission; 1968 and 1970, U.S. Bureau of the Census, unpublished data.

A school is defined as a division of the school system consisting of a group of pupils composed of one or more grade groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in one school plant, as is the case when the elementary and secondary programs are housed in the same school plant. The actual operation of schools is generally the responsibility of local school systems in the various States. The local basic administrative unit or school district, series H 412, is an area organized as a quasi-corporation under the jurisdiction of a board of education responsible for the administration of all public schools in the area. School districts provide the machinery through which local control of schools is exercised, and are largely responsible for the location and size of schools, the types of educational programs and services offered, and the amount of financial support to be provided locally.

One-teacher public schools, series H 417, are schools in which one teacher is employed to teach all grades authorized in the school, regardless of the number of rooms in the building.

A public school is defined as one operated by publicly elected or appointed school officials in which the program and activities are under the control of these officials and which is supported by public funds. School enrollment and other figures, prior to 1960, are for public elementary and secondary day schools in conterminous United States. Excluded are public schools in the outlying areas of the United States, public schools operated directly by the Federal Government on military reservations and schools for Indians, public residential schools for exceptional children, and subcollegiate departments of institutions of higher education. Only regular day school pupils are included; pupils enrolled in night schools and summer schools are excluded.

Nonpublic schools, while subject to certain regulatory controls of the State, are under the operational control of private individuals or church-affiliated or nonsectarian institutions. Whether operated on a profit or nonprofit basis, nonpublic schools are generally supported by private funds as distinguished from public funds.

Nonpublic school figures are not strictly comparable. For example, in some of the earlier years, the figures include enrollment of secondary pupils in subcollegiate departments of institutions of higher education, normal schools, etc. Enrollment figures do not include private schools for exceptional children or private vocational or trade schools. They cover only regular day school pupils; they exclude summer school pupils.

Other schools, series H 431–432, include subcollegiate departments of institutions of higher education, residential schools for exceptional children, Federal schools for Indians, and Federal schools on Federal installations.

It should be noted that the enrollment information in the *Biennial Survey of Education* is collected on a State-by-State basis, and represents a cumulative count of the total number of different pupils registered at any time during the school year in each State. Pupils enrolled in two or more States at any time during the school year are, therefore, counted more than once, resulting in a tendency to increase the total enrollment figure for the Nation.

The number of pupils per classroom teacher, otherwise known as the "pupil-teacher ratio," series H 423, H 425, H 428, and H 430, has often been used as a measure of teacher workload. However, precise data of this type have never actually been available either nationally or for the individual States. In the first place, it has been difficult to obtain accurate information on the number of classroom teachers. The available figures on "teachers" have generally included librarians and guidance and psychological personnel as well as classroom teachers. In the second place, the meaning of the term "pupils" has not always been uniform, since "pupils" may refer to the number *enrolled*, the number in *average daily attendance*, or the number in *average daily membership*. Even if valid pupil-teacher ratios could be computed from satisfactory data, they lose meaning when applied to the whole Nation or to an entire State. National averages tend to obscure the significant differences in pupil-teacher ratios, such as those between urban and rural areas, between large and small schools, and between elementary and secondary schools.

H 433–441. School enrollment rates per 100 population, by sex and race, 1850–1970.

Source: U.S. Bureau of the Census. Annual data, *Current Population Reports*, series P-20, Nos. 54, 66, 74, 80, 93, 101, 110, 117, 126, 129, 148, 162, 167, 206, and 222. Decennial data, 1850–1930, Fifteenth Census Reports, *Population*, vol. II, pp. 1094 and 1095; 1940–1950, *U.S. Census of Population: 1950*, vol. II, part 1, p. 1–206; 1960, *U.S. Census of Population: 1960*, PC(1)-1D, table 165, pp. 1–369 to 1–371; 1970, *U.S. Census of Population: 1970*.

For decennial census years, the statistics refer to the total population within the specified age group; figures from the Current Population Survey refer to the civilian noninstitutional population. Persons not covered in the CPS (Armed Forces and institutional population) are known to have low enrollment rates.

In the Census of Population for 1940, 1950, 1960, and 1970, and in the Current Population Survey, 1954–1970, enrollment was defined as enrollment in "regular" schools only—that is, schools where enrollment may lead to an elementary or high school diploma, or to a college, university, or professional school degree. Such schools are public, private, or parochial schools; colleges, universities, or professional schools, either day or night. Enrollment was either full time or part time.

If a person was receiving regular instruction at home from a tutor and if the instruction was considered comparable to that of a regular school or college, the person was counted as enrolled. Enrollment in a correspondence course was counted only if the course was given by a regular school, such as a university, and the person received credit thereby in the regular school system.

Children enrolled in kindergarten were included in the "regular" school enrollment figures in the Current Population Survey beginning in 1950; children enrolled in nursery school were included beginning in 1967. Children enrolled in kindergarten were not included in the "regular" school enrollment figures in the 1950 Census of Population; however, they have been included here to make the data comparable with earlier years and with current practice. In censuses prior to 1950, no attempt was made to exclude children in kindergarten so that the statistics for those years include varying proportions attending kindergarten. Also, in censuses prior to 1940, the data were not restricted as to type of school or college the person was attending.

In addition to differences in definitions of school enrollment and in population coverage, the enrollment data for different years may differ because of variations in the dates when the questions were asked and time periods to which enrollment referred. Data from the current surveys were obtained in October and refer to enrollment in the current school term. In 1940, 1950, 1960, and 1970, the censuses were taken as of April 1, but enrollment related to any time after March 1 in 1940 and any time after February 1 in 1950, 1960, and 1970. The corresponding question in the censuses from 1850 to 1930 applied to a somewhat longer period: In 1850 to 1900, to the 12 months preceding the census date; and in 1910, 1920, and 1930, to the period between the preceding September 1 and the census date (April 15 in 1910, January 1 in 1920, and April 1 in 1930).

Information on school enrollment is also collected and published by the Office of Education (see series H 418–432 and H 700–715). These data are obtained from reports of school surveys and censuses. They are, however, only roughly comparable with data collected by the Bureau of the Census through household interviews, because of differences in definitions, time references, population coverage, and enumeration methods.

See also general note for series H 412–787.

H 442–476. School enrollment, by age, race, and sex, 1953–1970, and by age and sex, 1940–1952.

Source: U.S. Bureau of the Census, *Current Population Reports*, series P-20, Nos. 19, 24, 30, 34, 45, 52, 54, 66, 74, 80, 93, 101, 110, 117, 126, 129, 148, 162, 167, 190, 206, and 222.

The estimates are based on data obtained in October in the Current Population Survey of the Bureau of the Census, except that data shown for 1940 are based on complete enumeration of the population and were published in volumes II and IV of the 1940 census reports on population. Except for 1940, data are for the civilian population excluding the relatively small number in institutions. Data shown for 1940 relate to the total population, including those in institutions and all members of the Armed Forces (about 267,000) enumerated on April 1.

The school enrollment statistics from the current surveys are based on replies to the enumerator's inquiry as to whether the person was enrolled in school. Enumerators were instructed to count as enrolled

anyone who had been enrolled at any time during the current term of the school year in any type of graded public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time or part-time basis and during the day or night. Thus, regular schooling is that which may advance a person toward an elementary or high school diploma, or a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for "regular" schools.

"Special" schools are those which are not in the regular school system, such as trade schools or business colleges. Persons attending "special" schools are not included in the enrollment figures.

Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a "regular" school.

Since the estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions, and enumerators. As in any survey work, the results are subject to errors of response and reporting as well as to sampling variability.

H 477–485. Enrollment of exceptional children in special programs, 1922–1970.

Source: U.S. Office of Education, 1922–1948, *Biennial Survey of Education in the United States, 1946–1948*, chapter 5, Statistics of Special Schools and Classes for Exceptional Children; 1953, same report, *1952–1954;* 1958–1970, *Digest of Educational Statistics*, various issues.

"Exceptional children" applies to pupils who need special adjustive services, referred to as "special education," because of their physical, intellectual, or personal-social differences from other children. Included are the unusually bright or gifted children; the mentally retarded; the crippled, including the cerebral-palsied; those with special health problems such as cardiac involvement, epilepsy, and other debilitating conditions; the blind and partially seeing; the deaf and hard-of-hearing; those with speech defects; and the socially and emotionally maladjusted.

Pupils are reported according to the major type of exceptionality for which they were receiving special education.

H 486–491. Public elementary and secondary schools—receipts, by source, 1890–1970.

Revenue receipts represent additions to assets (cash) from taxes, appropriations, and other funds which do not incur an obligation that must be met at some future date and do not represent exchanges of property for money. Receipts from county and other intermediate sources are included with local receipts. Other sources of revenue, series H 491, include gifts and tuition, and transportation fees from patrons.

Nonrevenue receipts represent amounts which either incur an obligation that must be met at some future date or change the form of an asset from property to cash and therefore decrease the amount and the value of school property. Money received from loans, sale of bonds, sale of property purchased from capital funds, and proceeds from insurance adjustments constitute most of the nonrevenue receipts.

Ferriss, *Indicators of Trends in American Education*, appendix C, © Russell Sage Foundation, New York, 1969, reprinted with permission.

Expenditures for administration, series H 495, include those for the central office staff for administrative functions and all general control which is systemwide and not confined to one school, subject, or narrow phase of school services. Instruction expenditures, series H 496, include salaries of instructional staff and clerical assistants, and expenditures for free textbooks, school library books, and supplies and other expenditures for instruction. Plant operation and maintenance expenditures, series H 497, include salaries of custodians, engineers, carpenters, painters, etc.; fuel, light, water, and power; and supplies, expenses, and contractual service. Other current expenditures, series H 498, include those for fixed charges and for attendance, health, transportation, food, and miscellaneous services.

Capital outlay, series H 499, includes expenditures for the acquisition of fixed assets or additions to fixed assets (such as land or existing buildings, improvement of grounds, construction of buildings, additions to buildings, remodeling of buildings, and initial or additional equipment). Interest, series H 500, includes interest payments on short-term and current loans from current funds, and on bonds from current and sinking funds. Other expenditures, series H 501, include expenditures, when separately reported, for summer schools, community colleges, and adult education.

See also general note for series H 412–601 and text for series H 412–432.

H 508–519. Private schools—receipts and expenditures, by level of instruction and by purpose, 1930–1970.

Source: U.S. Office of Education, 1930–1958, *Biennial Survey of Education in the United States*, various issues; 1960–1970, *Digest of Educational Statistics* and *Projections of Educational Statistics*, annual issues.

See text for series H 486–491 and H 492–507.

H 520–530. Public elementary and secondary day schools—attendance and instructional staff, 1870–1970.

Source: U.S. Office of Education, 1870–1916, *Annual Report of the United States Commissioner of Education*, various issues; 1918–1958, *Biennial Survey of Education in the United States*, various issues; 1960–1970, *Digest of Educational Statistics*, annual issues.

Figures for average daily attendance in public schools were computed by dividing the total number of days attended by all pupils enrolled by the number of days school was actually in session. Only days when the pupils were under the guidance and direction of teachers are considered as days in session.

"Instructional staff" refers to personnel who render direct and personal services which are in the nature of teaching or the improvement of the teacher-learning situation. Included, therefore, are supervisors of instruction, principals, teachers, guidance personnel, librarians, and psychological personnel. The duty of supervisors of instruction, including consultants, is to assist teachers in improving the learning situation and instructional methods at a particular level or in a particular subject. Principals are the administrative heads of schools. They usually administer a building or a group of buildings with or without the aid of supervisors.

The term "teacher" may be defined as a person employed to instruct pupils or students. At the elementary and secondary levels it does not include supervisors and principals, or librarians and guidance and psychological personnel when separately reported; at the higher education level it does not include administrative and research staff members.

Beginning with the school year ending in 1920, the Office of Education has collected data on salaries of total instructional staff (supervisors, principals, teachers, librarians, and guidance and psychological personnel). Salary information for prior years is available for teachers only. Average annual salaries of instructional staff members were obtained by dividing total expenditures for salaries by the number of such personnel.

H 531–534. Pupil transportation—public elementary and secondary schools, 1930–1970.

Source: U.S. Office of Education, *Digest of Educational Statistics, 1972*, p. 37.

Pupil transportation services are generally the result of State legislation for reorganization of school systems and consolidation of widely scattered school attendance areas and the objective of school districts to achieve equalization of educational opportunity.

Expenditures of public funds for transportation include salaries, vehicle replacement, supplies and maintenance for vehicles and garages, transportation insurance, contracted services, fares for public transportation, and payments in lieu of transportation.

Prior to 1960, the cost per pupil transported was based on pupils in average daily membership; thereafter, on pupils in average daily attendance.

H 535–544. Catholic elementary and secondary schools, 1920–1970.

Source: 1920–1948 (except 1947), U.S. Office of Education, *Biennial Survey of Education in the United States, 1930–1932, 1934–1936*, and *1946–1948*, and *Digest of Educational Statistics, 1972*; 1947 and 1952–1963, National Catholic Welfare Conference, Washington, D.C., *Summary of Catholic Education*, biennial issues; 1950 and 1964–1970, National Catholic Educational Association, Washington, D.C., *A Statistical Report on Catholic Elementary and Secondary Schools for the Years 1967–68 to 1969–70* and *A Report on U.S. Catholic Schools, 1970–71* (copyright).

The elementary division of the Catholic school system includes five types of schools: (1) Parochial schools are operated in connection with parishes; (2) inter-parochial schools are under the administrative control of two or more parishes; (3) archdiocesan or diocesan schools are under the direct administration of an ordinary and serve the parishes designated by him; (4) private schools are conducted independently of parishes by religious communities; (5) institutional schools include industrial schools; schools for blind, deaf, delinquent, or subnormal children; and schools conducted in orphanages.

In Catholic secondary education, there are, broadly, three types of administrative control, defined generally as for the elementary above: (1) Central or diocesan; (2) parochial; and (3) private. However, many parochial and private schools really function as diocesan schools.

The data for elementary school teachers exclude priests serving as part-time teachers of religion.

H 545–571. Public secondary day schools—percent of pupils enrolled in specified subjects, 1890–1965.

Source: U.S. Office of Education, 1890–1949, *Biennial Survey of Education in the United States, 1948–1950*; 1955–1965, *Digest of Educational Statistics, 1972*, and unpublished data.

For 1910–1934, the percentages are based on the number of pupils enrolled in the last 4 years of all schools that returned usable questionnaires. For 1890, 1900, and 1949–1965, the figures are based on the total number of pupils enrolled in the last 4 years of all schools. The source for 1890–1949 states that "when necessary, the subjects reported in previous surveys were analyzed, and appropriate components were either recombined, separately listed, or eliminated (with corresponding changes in the number and percentage enrolled) in a manner to yield as close comparability as possible with the data in the current (1948–49) survey."

H 572–586. Vocational programs, federally aided, 1918–1970.

Source: U.S. Office of Education, *Vocational & Technical Education* (previously titled *Digest of Annual Reports of State Boards for Vocational Education*), annual issues.

These series include Alaska, Hawaii, and Puerto Rico for all years; Virgin Islands beginning 1951; Guam beginning 1960; and American Samoa and the Trust Territory of the Pacific Islands in 1970.

H 587–597. School retention rates—fifth grade through college entrance, 1924–1932 to 1962–1970.

Source: U.S. Office of Education, *Digest of Educational Statistics, 1972*, p. 14.

The Office of Education bases its school retention rates on fifth-grade enrollment because the high rate of retardation in the early elementary grades tends to inflate the enrollment figures for these grades. Fifth-grade enrollment is regarded as a better measure of the number of persons entering the first grade for the first time 4 years earlier than is total first-grade enrollment for that year. Compulsory attendance laws keep virtually all children in school at least until the fifth grade.

Retention rates are based on enrollments in public elementary and secondary schools and are adjusted to include estimates for nonpublic schools. The computations include all college students, full-time and part-time, who are enrolled in degree-credit programs.

H 598–601. High school graduates, by sex, 1870–1970.

Source: U.S. Office of Education. 1870–1938, *Statistical Summary of Education, 1937–38*, table 15; 1940–1952, *Biennial Survey of Education in the United States*, various issues; 1954–1970, *Projections of Educational Statistics*, annual issues. **Series H 599,** computed on basis of U.S. Bureau of the Census estimates in *Current Population Reports*, series P-25, Nos. 310, 311, and 511, and unpublished data.

Figures for high school graduates include graduates from public and nonpublic schools and exclude persons granted equivalency certificates.

H 602–617. Years of school completed, by race and sex, 1940–1970.

Source: U.S. Bureau of the Census, *Current Population Reports*, series P-20, Nos. 15, 45, 77, 99, 121, 138, 158, 169, 182, 194, and 207.

These data are based on sample surveys and relate to the resident population, including inmates of institutions and members of the Armed Forces living off post or with their families on post; all other members of the Armed Forces are excluded. Except for 1940, the data were derived from the combination of answers to two questions: (a) "What is the highest grade of school he has ever attended?" and (b) "Did he finish this grade?" In 1940, a single question was asked on highest grade of school completed.

The questions on educational attainment apply only to progress in "regular" schools; for definition, see text for series H 442–476.

The median years of school completed, series H 609 and H 617, is defined as the value which divides the population into two equal parts—one-half having completed more, and the other half less, schooling than the median. The median was computed after the statistics on years of school completed had been converted to a continuous series of numbers (e.g., completion of the first year of high school was treated as completion of the 9th year and completion of the first year of college as completion of the 13th year). The persons completing a given school year were assumed to be distributed evenly

within the interval from .0 to .9 of the year (e.g., persons completing the 12th year were assumed to be distributed evenly between 12.0 and 12.9). The effect of the assumption is to place the median for younger persons slightly below, and for older persons slightly above, the true median. Because of the inexact assumption as to the distribution within an interval, this median is more appropriately used for comparing groups and the same group at different dates than as an absolute measure of educational attainment.

H 618–647. Median years of school completed, by age, sex, and race, 1940–1970.

Source: U.S. Bureau of the Census, 1940 and 1950, *U.S. Census of Population: 1950*, vol. II, part 1, pp. 1–236 to 1–239; 1960, *U.S. Census of Population: 1960*, series PC(1)–1D, pp. 1–404 to 1–407; 1970, *Current Population Reports*, series P-20, No. 207, pp. 11–15.

The data for 1940, 1950, and 1960 are based on the decennial censuses—complete count in 1940, 20-percent sample in 1950, and 25-percent sample in 1960. The data for 1970 are based on the March 1970 Current Population Survey and may differ from census data for the following reasons: (1) Only those members of the Armed Forces in the United States living off post or with their families on post are included in the CPS whereas all members of the Armed Forces in the United States are included in the census data; (2) there are differences between the CPS and the censuses in coverage, enumeration techniques, and methods of allocating responses.

In general, the data refer to education received in "regular" schools. For definition, see text for series H 442–476.

For definition of median years of school completed, see text for series H 602–617. The procedure used both in 1940 and 1950 for calculating the median years of school completed made allowance for the fact that many persons reported as having completed a given full school year had also completed a part of the next higher grade. Thus, it is assumed that persons who reported 12 full years of school completed had actually completed 12.5 years, on the average.

Differences in the quality of education data for the two censuses may have resulted in part from changes in the way the information was requested. In 1940, a single question was asked on highest grade of school completed. In the 1950 and 1960 censuses and the 1970 survey, data on years of school completed were obtained from a combination of responses to two questions, one asking for the highest grade of school attended and another whether that grade was finished. Analysis of data from the 1940 census returns and from surveys conducted by the Bureau of the Census based on the same question wording as in 1940 indicated that respondents frequently reported the year or grade they had last attended, instead of the one completed. There is evidence that, as a result of the change in the questions in 1950, there was relatively less exaggeration in reporting educational attainment than in 1940. Hence, the indicated increases in attainment between 1940 and 1950 tend slightly to understate the true increase.

Although the statistics on median years of school completed have been available only since 1940, the data by age give further indication of time trends.

See also general note for series H 412–787.

H 648–663. Income of males 25 years old and over, by years of school completed, 1939–1970.

Source: 1939–1949, Herman P. Miller, "Annual and Lifetime Income in Relation to Education: 1939–1959," in American Economic Association, *The American Economic Review*, December 1960, pp. 966 and 981 (copyright); 1956–1970, U.S. Bureau of the Census, *Current Population Reports*, series P-60, No. 74, and unpublished data.

Data for 1939 were derived from *1940 Census of Population, Education: Educational Attainment by Economic Characteristics and Marital Status*, tables 29 and 31; for 1946, from *Current Population Reports*, series P-60, No. 5; and for 1949, from *1950 Census of Population*, series P-E, No. 5B, *Education*, tables 12 and 13. For details of methodology, see the source.

Neither the income concept nor the universe covered is directly comparable for all years shown. Most of the differences, however, are relatively small and are not believed to seriously distort the relationships. The figures for 1939 are based on the 1940 census and are restricted to males 25–64 years of age with $1 or more of wage or salary income and less than $50 of nonwage income. For this group the averages represent total money income; however, the universe has been restricted to those persons who received only wage or salary income. Only about three-fifths of all men 25–64 years old in 1940 were in this category. The effects of this restriction cannot be measured, but it is undoubtedly more important than restrictions cited for other years. It is also possible that this restriction affects college graduates more than persons with less schooling and for them tends to create an adverse selection since college graduates are more likely to have income other than earnings.

The 1946 figures are based on the Current Population Survey and represent the total money earnings (not total income) of the civilian noninstitutional male population 25 years old and over. Although the conceptual differences between income and earnings are substantial, the actual differences in the averages are quite small, primarily because the amount of nonearned income is small relative to the total and this type of income tends to be seriously underreported in household surveys of income. The 1949 figures are based on the 1950 census and also represent the total money income of all males 25 years old and over, including a relatively small number of institutional inmates.

The 1956–1970 figures are entirely comparable since they are based on the Current Population Survey and represent the total money income of the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excluding all other members of the Armed Forces. For each person in the sample 14 years old and over questions were asked on the amount of money income received during the preceding calendar year from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security; (5) dividends, interest (on savings or bonds), income from estates or trusts or net rental income; (6) public assistance or welfare payments; (7) unemployment compensation, government employee pensions, or veterans' payments; (8) private pensions, annuities, alimony, regular contributions from persons not living in this household, royalties, and other periodic income. The amounts received represent income before deductions for personal taxes, Social Security, bonds, etc.

Mean income represents the amount obtained by dividing the total income of a group by the number of income recipients in that group. In the derivation of aggregate amounts based on grouped data for 1956–1968, the number of males in each income interval was multiplied by an estimated mean income. For income intervals below $8,000, the midpoint of each class interval was used; $8,900 was used for the interval $8,000 to $9,999; $12,000 for the interval $10,000 to $14,999; and $19,000 for the interval $15,000 to $24,999. For the $25,000 and over interval, the interpolation was from a Pareto Curve fitted to the data for the upper income range.

H 664–668. Percent illiterate in the population, by race and nativity, 1870–1969.

Source: U.S. Bureau of the Census, 1870–1930, Fifteenth Census Reports, *Population*, vol. II, p. 1223; 1940–1969, *Current Population Reports*, series P-20, Nos. 20, 45, and 217.

Persons were regarded as illiterate who could not read and write, either in English or some other language. Information on illiteracy of the population was obtained from direct questions in the censuses of 1870–1930. The data for 1947, 1952, 1959, and 1969 were obtained from sample surveys; they exclude the Armed Forces and inmates of

institutions. The statistics for the census years 1940 and 1950 were derived by estimating procedures. In 1947, the literacy question was asked only of persons who had completed less than 5 years of school; in 1952, 1959, and 1969, the same general procedure was used but the question was asked of those who had completed less than 6 years of school.

Some variation has existed over the years in the way the question on illiteracy was asked. Since 1930, reference has been made as to whether or not the person was able to read and write. In censuses of 1870–1930, two questions were asked, one on whether the person was able to read and one on whether he could write. Illiteracy was defined as inability to write "regardless of ability to read." Since the data showed that nearly all persons who were able to write could also read, the earlier statistics should be generally comparable with data obtained through the consolidated question used in later years.

Ability to read and write cannot be defined so precisely in a census as to cover all cases with certainty. No specific test of ability to read and write was used, but enumerators were instructed not to classify a person as literate simply because he was able to write his name. Analysts of earlier census data assumed that the illiterate population comprised only those persons who had no education whatever. Information on the educational attainment of illiterates obtained in recent sample surveys indicates, however, that some persons cannot read and write even though they have had some formal schooling. For example, data from the Current Population Survey of October 1952 show that among persons 14 years old and over the proportion reported as illiterate ranged from 77.8 percent of those who had not completed a year of school to 1.3 percent of those who had completed 5 years. Comparable figures from the November 1969 survey were 57.4 percent and 2.3 percent, respectively.

Data on illiteracy were also collected in the censuses of 1840, 1850, and 1860, but are not included here because they are not comparable with statistics for subsequent years, and because of limitations in the quality of data for those early years. In 1840, the head of the family was asked for the total number of illiterates in each family, a method which undoubtedly led to some understatement. Beginning with 1850, the individual entry system was used, the question being asked regarding each member of the family. By 1870, another change in census methods was introduced, separate questions being asked on ability to read and ability to write. In addition to changes in the form of the inquiry, the statistics on illiteracy for 1840, 1850, and 1860 related to the population 20 years old and over, whereas in the 1870 and later censuses they referred to the population 10 years old and over.

The percentages of illiterates in the total population 20 years old and over, as recorded in those earlier censuses, were as follows: 1840, 22.0 percent; 1850, 22.6 percent; and 1860, 19.7 percent. The comparable percentages for the white population 20 years old and over in those years were 9.0, 10.7, and 8.9 percent, respectively. The apparent increases in illiteracy of white persons in 1850 and 1870 may be due, in part, to the large influx of immigrants during those periods, many of whom could not read and write in any language. It is more likely, however, that the apparent increases resulted from improvements in the way the information was obtained at those census dates.

See text for series H 664–668.

H 689–765. General note.

The Office of Education has issued statistical reports on higher education on a periodic basis since 1870. Until 1916, these statistics appeared in the *Annual Report of the United States Commissioner of Education*. There was no report for 1917. For 1918–1958, statistical reports were issued biennially, as chapters of the *Biennial Survey of Education in the United States*. Since 1962, data have appeared in the annual publication, *Digest of Educational Statistics*. In addition, an annual report on conferral of earned degrees has been issued since 1948 and one on early fall enrollments since 1946. An annual report on current income and expenditures and other finance items was also issued from 1933 to 1940, first under the title *The Economic Outlook in Higher Education* and later under the title *College Income and Expenditures*.

Among the major problems involved in the collecting and processing of nationwide statistics of higher education have been those of uniformity and promptness of reporting and completeness of coverage of the field. The problem of uniformity of reporting was attacked in 1930 with the formation of the National Committee on Standard Reports for Institutions of Higher Education; this committee was disbanded in 1935. Its successor, the Financial Advisory Service of the American Council on Education, carried on the work until 1940, when it, too, was discontinued. These two organizations, voluntary in character and operating with no official status, did much to conventionalize finance accounting and reporting procedures in universities and colleges.

The problems of promptness of reporting and completeness of coverage stem from the fact that only the land-grant institutions (fewer than 4 percent of all the institutions in the Nation) are under legal obligation to submit financial or statistical reports to the Office of Education. The percent of institutions supplying usable reports within a reasonable time, however, has increased materially in the last two or three decades, in spite of the fact that inquiries emanating from the Office of Education have increased in number and scope.

Another problem in the compilation of historical statistics of higher education is the double counting of data for some institutions. Until 1916, the tabulations of the Office of Education were built largely around the various professional curricula, with the result that in many instances the data of a professional school within a university were included both in the over-all tabulations of universities and colleges and in those of the profession involved. With the inception of the *Biennial Survey of Education* in 1918, the emphasis in tabulation was shifted to the administrative organization and the data relating to certain professional schools were so tabulated that any possible duplication was identifiable without too much difficulty. Since 1932, the Office of Education has maintained a master list of all institutions in the Nation; thus, the problem of duplicate tabulation is no longer an important one.

H 689–699. Institutions of higher education—number and faculty, 1870–1970.

Source: **Series H 689–692**, and **series H 696–699**, U.S. Office of Education, 1870–1916, *Annual Report of the United States Commissioner of Education*, various issues; 1918–1956, *Biennial Survey of Education in the United States*, various issues; 1958–1970, *Digest of Educational Statistics*, annual issues. **Series H 693–695**, Abbott L. Ferriss, *Indicators of Trends in American Education*, appendix E, © Russell Sage Foundation, New York, 1969, reprinted with permission; and National Center for Health Statistics, *Health Resources Statistics*, DHEW Pub. 73–1509.

Institutions reporting include universities, colleges, professional schools, junior colleges, teachers colleges, and normal schools, both privately and publicly controlled, regular session. The figures for institutions represent administrative organizations rather than individual campuses, i.e., a university operating one or more branches away from the main campus is counted as one institution. There is probably some (undeterminable) underreporting in some of the earlier years. Since 1946, this underreporting has been corrected by the use of estimated reports prepared from secondary sources for nonrespondent institutions.

The term "junior college" is used comprehensively to designate

all institutions, of whatever curricular organization, which offer at least 2 but fewer than 4 years of college-level work immediately beyond the high school.

Although the first medical school in the United States was established in 1765, the accuracy of data recorded for years prior to 1900 is questionable. Inspection and classification of medical schools was initiated by the American Medical Association Council on Medical Education in 1904; by 1929 there was only one unapproved school. As far as the data permit, only approved medical and basic science schools are included. Data for 1964 and 1966 show only schools granting M.D. degrees, as reported to the U.S. Office of Education.

Before the founding of the first dental school in 1840, dental work was done by medical doctors or by persons who were self-taught or apprentice-trained. By 1880, most States required dental practitioners to be dental school graduates. For 1840 and 1926–1930, schools offering courses in dentistry are included; for 1850–1924, schools conferring degrees; for other years through 1962, schools in operation. Data for 1964 and 1966 show only schools granting D.D.S. degrees, as reported to the U.S. Office of Education.

Faculty figures include full-time and part-time faculty members. Except in 1932, no attempt has been made to evaluate these services on a full-time equivalent basis. Faculty figures also include the administrative, instructional, research, and other professional personnel. Resident instructional staff, however, excluded administrative and other professional personnel not engaged in instructional activities.

H 700–715. Institutions of higher education—degree-credit enrollment, 1870–1970.

Source: U.S. Office of Education, **series H 700–710** and **H 712–713**, 1946–1970, *Digest of Educational Statistics, 1973*, tables 87–89, 91, and 99; **series H 706–709**, 1870–1916, *Annual Report of the United States Commissioner of Education*, various issues; 1918–1944, *Biennial Survey of Education in the United States*, various issues. (Also, for series H 707, scattered years, U.S. Bureau of the Census, unpublished data.) **Series H 711**, 1946–1968, and **series H 714–715**, 1946–1960, Abbott L. Ferriss, *Indicators of Trends in American Education*, appendix D, © Russell Sage Foundation, New York, 1969, reprinted with permission. **Series H 711**, 1950, U.S. Bureau of the Census, unpublished data. **Series H 714–715**, 1962–1970, U.S. Office of Education, *Projections of Educational Statistics*, 1972 and 1973 editions.

The term "degree-credit enrollment" refers to students whose current program in an institution of higher education consists wholly or principally of work which is creditable toward a bachelor's or higher degree, either in the student's own institution or by transfer to another institution.

See also text for series H 689–699.

H 716–727. Institutions of higher education—current income, 1890–1970.

Source: U.S. Office of Education. 1890–1910, *Annual Report of the United States Commissioner of Education*, various issues; 1920–1960, *Biennial Survey of Education in the United States*, various issues; 1962–1964, *Higher Education Finances*, OE 52009, and unpublished data; 1966–1970, *Financial Statistics of Institutions of Higher Education*, various issues. (Most of these data appear also in the annual *Digest of Educational Statistics*.)

Total current income represents funds accruing to, or received by, higher educational institutions, usable for their recurring day-to-day activities.

Educational and general funds, series H 717–725, are those available for the regular or customary activities of an institution which are part of, contributory to, and/or necessary to its instructional or research program. These include salaries and travel of faculty and administrative or other employees; purchase of supplies or materials for current use in classrooms, libraries, laboratories, or offices; and operation and maintenance of the educational plant.

Income from students, series H 718, represents fees (matriculation, tuition, laboratory, library, health, and other fees, but not charges for rooms or meals) regularly paid by students themselves or for them by their relatives or philanthropic groups. Payments of tuition and fees by the Federal Government for veterans are not included.

Endowment and other nonexpendable funds, series H 719, are those funds the principal of which is to be invested and only the income of which is to be used for the current purposes of the institution. If funds are merely temporarily placed in the endowment fund, the right to withdraw them being reserved by the donor or the governing board of the institution concerned, they are known as "funds functioning as endowment" and are not subject to the principal of "once endowment, always endowment."

Private gifts and grants, series H 723, are voluntary contributions from philanthropically-minded individuals and organizations to the various institutions of higher education.

Sales and services of instructional departments and of organized activities related to them, series H 724, are frequently referred to briefly as "related activities." The term includes all the incidental earnings of an institution, such as sales of livestock or dairy products of an agricultural school; tuition and other income of a laboratory school, a demonstration school, or a museum; fees for care at a medical or dental clinic; and other income of this nature derived from services directly connected with the instructional program of the institution.

Other sources of income, series H 725, include annuity funds and plant funds. Annuity funds are funds acquired subject to the condition that the recipient institution pay a stipulated sum of money annually or at other regular intervals to a designated beneficiary or beneficiaries, not necessarily the same person as the donor. These payments continue until the death of the beneficiary (the last beneficiary, if more than one), at which time the principal of the fund becomes the property of the institution.

Plant funds are funds which have been or are to be invested in buildings, grounds, furniture, scientific equipment, or other permanent physical property of the institution. Real estate held for direct educational or auxiliary use by the institution is thus part of the plant-fund group. See also series H 739–746.

Income from auxiliary enterprises and activities, series H 726, includes income of dormitories, dining halls, cafeterias, union buildings, college bookstores, university presses, student hospitals, faculty housing, intercollegiate athletic programs, concerts, industrial plants operated on a student self-help basis, and other enterprises conducted primarily for students and staff and intended to be self-supporting without competing with the industries of the community in which the institution is located.

Student-aid funds, series H 727, are funds having to do with the provision of scholarships, fellowships, prizes, and student financed aid of any type not involving employment by or repayment to the institution. Student-aid funds may be lent to students to help them defray their expenses while in school.

The "other income" account of an institution of higher education includes income which is either so incidental in its nature, so irregular in its frequency, or so minor in its amount as to make its classification difficult or impractical. The most common types of other income are probably (1) interest on current funds; (2) rent of institutional property for noninstitutional purposes; (3) transcript fees of students; (4) library fines; and possibly other minor items.

See general note for series H 689–765.

H 728–738. Institutions of higher education—current expenditures, 1930–1970.

Source: U.S. Office of Education. 1930–1960, *Biennial Survey of Education in the United States*, various issues; 1962–1964, *Higher Education Finances*, OE 52009, and unpublished data; 1966–1970, *Financial Statistics of Institutions of Higher Education*, various issues.

(Most of these data appear also in the annual *Digest of Educational Statistics.*)

Expenditure data were not tabulated for all institutions of higher education until 1930. Prior to that time they were collected from land-grant institutions and teacher-education institutions only. Other professional schools and non-land-grant institutions were omitted from the surveys.

Organized research expenditures, series H 732, cover research programs of sufficient magnitude to warrant carrying them separately in the finance budget.

Plant operation and maintenance expenditures, series H 734, include wages of janitors and other caretakers; cost of fuel, light, trucking of materials about the campuses, and repairs to buildings; and other costs connected with keeping the physical plant in good order.

Expenditures for conducting laboratory or demonstration schools, medical-school hospitals, dental clinics, home-economics cafeterias, agricultural-college creameries, college-operated industries, and other activities closely connected with the instructional program but not actually integral parts of it are frequently referred to briefly as "related activities," series H 735.

Extension and public service expenditures, series H 736, cover correspondence courses, radio and television courses, adult study courses and other non-degree-credit courses, institutes, public lectures, cooperative extension in land-grant institutions, radio and television stations, and similar media for carrying the work of an institution beyond its traditional and customary campus activities.

H 739–746. Institutions of higher education—plant fund operations, 1920–1966.

Source: U.S. Office of Education. 1920–1958, *Biennial Survey of Education in the United States,* various issues; 1960, *Statistics of Higher Education—Receipts, Expenditures, and Property, 1959–60;* 1962–1964, *Higher Education Finances,* OE 52009; 1966, *Higher Education Finances.* (Most of these data appear also in the annual *Digest of Educational Statistics.*)

Data represent moneys received and spent by higher educational institutions for expanding their physical holdings (land, buildings, equipment of various sorts) held or utilized primarily for instructional, recreational, or student residence purposes. Real estate held and operated for investment purposes is not included.

See also text for series H 716–727.

H 747–750. Institutions of higher education—property, 1890–1970.

Source: See source for series H 716–727.

Data represent value of all permanent or quasi-permanent assets which include lands, buildings, and equipment; funds held for investment purposes only (the income from such funds being available for current use); funds subject to annuity or living trust agreements; and funds the principal of which may be lent to students to help defray their living expenses or tuition bills. The term "fund" is used in its accounting sense of cash or other valuable assets (real estate, bonds, stock certificates, and other evidences of ownership or equity).

See also text for series H 716–727.

H 751–765. Institutions of higher education—degrees conferred, by sex, 1870–1970.

Source: **Series H 751–754, H 757–759,** and **H 761–763,** U.S. Office of Education, 1870–1953, *Biennial Survey of Education in the United States,* Statistics of Higher Education, biennial issues, and unpublished data; 1954–1970, *Projections of Educational Statistics,* annual issues. **Series H 755–756, H 760, H 764,** and **H 765,** Abbott L. Ferriss, *Indicators of Trends in American Education,* appendix D, © Russell Sage Foundation, New York, 1969, reprinted with permission, except series H 756 and H 760, 1968–1970, from U.S. Office of Education, unpublished data.

The first-level degree (designated as "bachelor's or first professional") is defined as the first degree granted upon completion of a course of study in a given field. The degree must be based on at least 4 years of college work or the equivalent thereof. The same classification (namely, "first level") is given to a degree, e.g., LL.B., regardless of whether the degree is based on 7 years' preparation, 6 years' preparation, or less; and regardless of whether the student had previously earned a degree in another field. The first-level degree is ordinarily a bachelor's degree, but important exceptions occur in certain of the professional fields. The second-level degree is a degree beyond the first level but below the doctorate; ordinarily, a master's degree. The doctorate (the highest level of earned degrees) includes such advanced degrees as Ph.D., Ed.D., D.Eng., and Dr. P.H.; it includes only earned degrees, not honorary.

H 766–787. Number of doctorates, by field, 1920–1970.

Source: National Research Council, Commission on Human Resources, Washington, D.C., Doctorate Records File.

The Doctorate Records File is a virtually complete source of data about persons receiving doctorates since 1920. The doctoral degrees reported are those earned at regionally accredited U.S. universities and include such degree titles as Doctor of Philosophy (Ph.D.), Doctor of Science (Sc.D.), Doctor of Education (Ed.D.), Doctor of Engineering (D.Eng.), etc. Professional degrees such as Doctor of Medicine (M.D.), Doctor of Dental Surgery (D.D.S.), and Doctor of Veterinary Medicine (D.V.M.) are excluded.

Information about the doctorate recipients of 1920 to 1957 was obtained from the graduate schools and is limited to the following: Sex, baccalaureate institution and year, master's institution and year, and doctoral institution, year, and field of degree. Since 1957 the information has been obtained from the Survey of Earned Doctorates questionnaire which is given to the doctoral candidates by the graduate schools at the time all requirements for the degree have been met. The questionnaires are completed by the doctorate recipients who provide data about their birth date and place, sex, citizenship, marital status, and racial or ethnic group. Information is also provided about their educational background from high school to doctorate, sources of financial support in graduate school, and postgraduation employment plans.

Some of the fields included in the groupings shown in this table are:

H 769, Earth sciences: mineralogy, geochemistry, stratigraphy, paleontology, geophysics, hydrology, oceanography, meteorology, applied geology, fuel technology, etc.

H 772, Basic medical sciences: biochemistry, biophysics, anatomy, cytology, embryology, immunology, microbiology and bacteriology, animal physiology, and molecular biology.

H 773, Medical sciences: medicine and surgery, public health, parasitology, pathology, pharmacology, hospital administration, veterinary medicine, pharmacy, etc.

H 774, Agricultural sciences: agronomy, agricultural economics, food science and technology, fish and wildlife, animal sciences, forestry, horticulture, phytopathology, etc.

H 775, Other biological sciences: biometrics and biostatistics, botany, ecology, hydrobiology, plant physiology, zoology, genetics, entomology, etc.

H 780, Other social sciences: communications, statistics, geography, area studies, urban and regional planning, etc.

H 784, Other arts and humanities: applied art, history and criticism of art, music, archaeology, religion, philosophy, linguistics, speech as a dramatic art, etc.

H 785, Professional fields: business administration, journalism, law and jurisprudence, theology, social work, home economics, library and archival science, speech and hearing sciences, etc.

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] Data for nonpublic schools for most years are partly estimated.
[2] Includes operating and nonoperating districts.
[3] Statistics are for 1970–71.
[4] Partially estimated.
[5] Data for 1890 and 1932–1938 exclude kindergarten enrollment; all other years include it.

Series H 433–441. School Enrollment Rates Per 100 Population, by Sex and Race: 1850 to 1970

[1954–1970, Current Population Survey estimates based on Survey sample; 1950, 1960, and 1970 census data based on 20-percent, 25-percent, and 15-percent samples, respectively. For 1890 and 1940–1970, figures refer to population 5 to 19 years old; 1850–1880, enrollment refers to all ages and population base to persons 5 to 19 years old; 1900–1930, figures refer to population 5 to 20 years old]

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] Beginning 1958, data as of February; earlier years, data for school year ending.
[2] Estimated on the basis of State reports to the U.S. Office of Education. (See *Digest of Educational Statistics, 1972*, table 34.)
[3] Beginning 1963, includes residential schools.
[4] Includes Hawaii.

* Denotes first year for which figures include Alaska and Hawaii.
[1] For 1922, 1924, and years prior to 1918, includes receipts undistributed by source.
[2] Prior to 1918, excludes receipts from sources other than State taxes and appropriations.
[3] Includes county and other intermediate sources of income. Prior to 1918, excludes receipts from sources other than local taxes and appropriations.
[4] "Other sources of revenue receipts" included with "Local."
[5] Estimated.
[6] Includes value of commodities distributed under the school lunch and milk programs.
[7] Includes only Federal aid for vocational education.

* Denotes first year for which figures include Alaska and Hawaii.

[1] Prior to 1918, includes expenditures for interest.

[2] Prior to 1910, includes only expenditures for salaries of teachers and superintendents.

[3] Prior to 1918, includes plant operation and maintenance; prior to 1910, includes all current expenditures except salaries of teachers and superintendents.

[4] Beginning 1966, includes capital outlay by State and local school building authorities.

[5] Beginning 1954, includes expenditures for community services, previously included in "current expenditures, day schools."

[6] Includes $7,816,000 in undistributed expenses.

* Denotes first year for which figures include Alaska and Hawaii.
[1] Prior to 1920, computed for teaching positions only; beginning 1920, also includes supervisors and principals.
[2] Prior to 1938, number of different persons employed rather than number of positions. Includes librarians and guidance and psychological personnel.
[3] Classroom teachers only. Excludes other nonsupervisory instructional staff.
[4] Includes 231 part-time teachers not classified by sex.

Series H 531–534. Pupil Transportation—Public Elementary and Secondary Schools: 1930 to 1970

School year ending—	Pupils transported		Expenditures of public funds [2]		School year ending—	Pupils transported		Expenditures of public funds [2]

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] Data for fall of year shown.
[2] Percentages for 1910, 1920, 1930, and 1940–1970 are based on population, 18 to 24 years old, as of July 1 prior to the opening of school; for all other years, based on July 1 population after the closing of school in June.
[3] Data for 1870–1954 for academic year; 1956–1964 for 1st term of academic year; thereafter, for fall of year shown.
[4] In some instances, a student may be enrolled simultaneously as both a graduate and an undergraduate, with the result that the total, series H 706 (different individuals), is less than the sum of series H 708 and H 709.
[5] Distributions estimated.
[6] Data for 1924 and previous years taken from U.S. Office of Education, *Education for Victory*, vol. 3, No. 6, 1944.

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] 1890 to 1952, includes unexpended plant funds.
[2] Includes funds functioning as endowment (book value).
[3] Annuities included with endowment funds.
[4] Includes annuity and student loan funds.
[5] Includes items not tabulated separately.
[6] Local included with State.

Chapter H

Religious Affiliation (Series H 788-805)

H 788–805. General note.

National statistics for all religious bodies, on an interdenominational basis, have been compiled at intervals since 1850 and until 1936 by the Bureau of the Census and, during the past few decades by the *Christian Herald*, a periodical published in New York, and by the National Council of the Churches of Christ in the United States of America, which, in its *Yearbook of American and Canadian Churches*, presents statistical data furnished by all faiths.

Practically all national religious bodies compile reports or estimates from time to time based on records kept by local churches (congregations or parishes), or from estimates furnished by the local churches. Probably about half the national bodies receive reports from their local churches annually and then issue the figures to their constituencies or to the public. The bodies which report annually the figures systematically received from their local churches are mainly the larger denominations. The other national bodies report their statistics at irregular intervals.

For those denominations which have standard forms, the records are kept locally as determined by the national body. For other denominations, the records are kept in accordance with the wishes of the local churches. The statistics are gathered by the denominations for their own, often different, purposes, thus leading to variety in the forms used and in the nature of the information gathered. In addition, local church records are usually kept by persons untrained in the keeping of statistical records, or persons with only the most elementary instruction or experience.

All denominations make their own definitions of membership or affiliation and, accordingly, there are also variations in the basis of compilation. However, the bodies reporting have made no major changes in their definitions since the Census of Religious Bodies, 1926. The definitions used since that date for the larger bodies are as follows:

The Eastern Churches report estimates of the total number of persons within the cultural or nationality group served.

The Jewish Congregations report on the number of Jews in communities having congregations.

The Roman Catholic Church, the Lutheran bodies, and the Protestant Episcopal Church report as members the total number of baptized persons, including infants.

Most Protestant bodies report as members those persons who have attained full membership, usually at about age 13.

Variations in definitions for years prior to 1926 are noted below in the text for specific series.

One relatively large body, the Church of Christ, Scientist, with headquarters in Boston, Mass., now forbids the enumeration of its members and the publication of statistics of affiliation. The local churches of this body reported a total membership of 268,915 in the Census of Religious Bodies for 1936, but have made no public report since then. A few relatively small bodies also do not report membership figures to compilers of national data. However, it is believed that the figures presented here cover all but a fraction of one percent of total religious affiliation.

H 788–792. Church denominations, members, and edifices, 1850–1936.

Source: U.S. Bureau of the Census, 1850–1890 and 1916, *Religious Bodies, 1916*, part I; 1906–1936, *Religious Bodies*, 1906, 1926, and 1936 volumes.

Data presented are not directly comparable from census period to census period. Special note must be taken in the case of the data for 1936 in relation to other years. The compilation for that year was less complete than those of other years for reasons noted below.

Limited information on religious bodies (number of congregations and buildings, and value of edifices) was first published in the census report for 1850 and similar information was included in the reports for 1860 and 1870. In 1880, the figures gathered by the Census Office were not published. In 1890, the Census Office collected figures from religious organizations concerning membership, number and value of edifices, number of ministers, etc.

The 1906 Census of Religious Bodies (2 parts) was the first to be compiled by means of a questionnaire mailed to the pastors or clerks of the local churches. The Jewish Congregations reported heads of families only (101,457, principally male, persons). It is indicated that, in most denominations, 99 percent of the local churches to which forms were mailed made returns.

The 1916 census reported 41,926,854 members, a figure adjusted in the 1926 report to read 43,311,648 persons, for reasons there given. The Jewish Congregations reported only heads of families (357,135 persons). The methods used in the 1916 and 1926 censuses were essentially the same as those used in the 1936 census (see below).

Students of church statistics regard the compilation of 1926 as probably the most adequate one ever made. In this census, every local organization was classed as a church whether it was commonly known as a church, a congregation, a meeting, a society, a mission, a station, a chapel, or by some other term. "A local church may have had officers and an enrolled membership, or it may have been little more than an association or fellowship, but to be included in this enumeration it must have had a religious purpose and a distinctive membership."

For all denominations except the Jewish Congregations, the 1926 census reported 50,495,104 members, compared with a corrected total figure, partly estimated, of 42,954,512 persons in 1916. The Jewish Congregations reported "all Jews in communities where there is a congregation," whereas in 1916 they reported only "heads of families, seat holders, and other contributors." The figures for Jews were admittedly incomplete. With this census also, the Lutheran bodies, the Protestant Episcopal Church, and the Christian Reformed Church began to report on a more inclusive basis than in previous censuses.

The data for the 1936 census were obtained by means of a schedule for local church organizations mailed to the clergyman or the lay clerk of the local parish or congregation. The data collected were for the year 1936, "or to the church record year most nearly conforming to the end of that year." The Census Bureau established contact with persons in authority in the various religious bodies in order to secure lists of pastors or clerks of the local religious organizations. Special agents were employed for the purpose of securing data from "some loosely organized denominations, or those averse to publishing the statistics of their organizations." The census received only halfhearted support from a few denominations and undoubtedly the total membership figures would have been much larger if all churches had furnished statistics. The incompleteness of returns is also reflected by the fact that total value of church edifices (series H 792) is lower in 1936 than in 1926. A private compilation for 1936, published in the *Christian Herald*, New York, July 1937, based on official reports of the religious bodies, listed 244,147 local churches. It seems probable that about 20 percent of the officers of active local churches in 1936 did not report to the Bureau of the Census. The *Christian Herald* stated, for example, that the *Southern Baptist Handbook* for 1937 reported 4,482,315

members for 1936, while the Bureau of the Census reported only 2,700,155 members.

Differences among the religious bodies in defining the term "member" were noted. The Jewish Congregations, continuing a basis begun in 1926, reported "all persons of the Jewish faith living in communities in which local congregations are situated.... Among the Roman Catholic and Eastern churches, all persons, even infants, are considered members, provided they have been baptized according to the rites of the church.... The Protestant Episcopal Church, and the Lutheran bodies, because they also count as members all baptized persons in the congregation, tend toward the more inclusive definition of the term." In the large majority of Protestant bodies, the term "member" is applied only to "communicants," or to persons who have attained to full membership, usually at age 13.

H 793–799. Membership of religious bodies, 1890–1970, and by major groups, 1951–1970.

Source: 1890–1926 and 1936, U.S. Bureau of the Census, *Religious Bodies*, various issues; 1931–1935, 1937, and 1945–1949, The Christian Herald Association, New York, *Christian Herald*, various issues (copyright); 1938–1944 and 1950–1970, National Council of the Churches of Christ, New York, *Yearbook of American Churches*, various issues (copyright).

The Bureau of the Census usually secured information for the year indicated, but it also accepted a figure for the church year nearest to that for which data were sought. In the compilations of private agencies the "latest information" is published for each denomination; in a number of instances, the actual figures of a denomination are for a previous period. For 1956, e.g., most bodies reported figures for that year, but many others had available only the data compiled for previous years. The lag is usually only of several years duration, but in a few instances (for small bodies) the actual figures are from the 1936 Census of Religious Bodies. Data for certain years, which do not appear in these series, appear in the *Christian Herald*; these data are not comparable as they include only the "communicant" or adult membership.

For definition of membership used by the larger groups (Eastern, Jewish Congregations, Roman ~~Catholic,~~ and Protestant bodies), see general note for series H 788–805. See also text for series H 788–792.

H 800. Roman Catholic members, 1891–1970.

Source: P. J. Kenedy & Sons, *The Official Catholic Directory*, New York (copyright), and unpublished data.

The continuous history of the Roman Catholic Church in this country began in Maryland in 1634.

Certain of the typographical errors appearing in the annual published reports issued by the source have been corrected in this series. Figures are compiled from reports by dioceses and parishes. For definition of membership, see general note for series H 788–805.

H 801. Presbyterian members, 1826–1970.

Source: Presbyterian Church in the U.S.A., 1826–1926, *Presbyterian Statistics Through One Hundred Years, 1826 to 1926*, Philadelphia (copyright); 1927–1957, unpublished data; 1958–1970, The United Presbyterian Church in the United States of America, annual *Minutes of the General Assembly* (copyright).

Figures include persons who have attained full membership, usually at age 13. Foreign members are excluded.

In 1958, The United Presbyterian Church of North America merged with The Presbyterian Church in the United States of America to form The United Presbyterian Church in the United States of America. This is the largest of 8 Presbyterian Churches in the United States. The other large Presbyterian Church, located primarily in the South, is the Presbyterian Church in the U.S.

H 802. Protestant Episcopal members, 1927–1970.

Source: *The Episcopal Church Annual*, Morehouse-Gorham Co. (previously Morehouse Barlow), New York (copyright).

This body entered the Colonies with the earliest settlers (1607) as the Church of England. It became autonomous as the Protestant Episcopal Church in the U.S.A. and adopted its present name in 1789. In 1967, the General Convention adopted "The Episcopal Church" as an alternate name.

Data include "communicants" residing abroad, numbering less than one-half of one percent of the total communicants during the period covered by the figures. For definition of membership, see general note for series H 788–805.

H 803. Methodist members, 1790–1970.

Source: Statistical Office of the Methodist Church, 1790–1948, *Methodist History as Revealed in Statistical Form* (loose insert in *The Methodist Fact Book*), Chicago, 1949; 1949–1955, *The Methodist Fact Book*, 1957; 1956–1970, *The General Minutes of The United Methodist Church*. (Copyright.)

The Methodist Church was formed in 1939 by a merger of the Methodist Episcopal Church; the Methodist Episcopal Church, South; and the Methodist Protestant Church. Figures include all three bodies prior to 1939. Members are persons who have attained full membership, usually at age 13.

The Evangelical United Brethren Church was formed in 1946 with the merger of the Evangelical Church and The Church of the United Brethren in Christ.

The United Methodist Church was formed in 1968 by a merger of The Methodist Church and The Evangelican United Brethren Church. The United Methodist Church is the largest of nearly 20 separate Methodist denominations. Three large black Methodist denominations, for which there are no annual statistical reports, are African Methodist Episcopal Church, African Methodist Episcopal Zion Church, and Christian Methodist Episcopal Church.

H 804. Seventh-day Adventist members, 1907–1970.

Source: Statistical Secretary of the Seventh-day Adventist Church, Tacoma Park, Washington, D.C., unpublished data.

This Protestant body developed out of an interdenominational movement in the early decades of the 19th century but was not formally organized until 1863.

The members of this body are mainly 13 years old and over. The latest year for which age grouping was reported was 1936, when the local churches of the body reported that only about 3 percent of their members were less than 13 years of age.

H 805. Southern Baptist members, 1845–1970.

Source: Southern Baptist Convention, *Southern Baptist Handbook, 1970*, Convention Press, Nashville (copyright).

In 1845, Southern Baptist withdrew from The General Missionary Convention over the question of slavery and other matters and formed the Southern Baptist Convention.

Membership in the Southern Baptist Convention consists only of individuals who present themselves to the church, request membership, and are baptized. Infant baptism is not practiced.

Series H 788–792. Church Denominations, Members, and Edifices: 1850 to 1936

[1] Represents members as defined by each denomination. Figures do not furnish an adequate basis for computing membership growth, not only because of organic denominational changes, but also because of basic changes in the definition of "member" by certain denominations.
[2] For churches reporting.

* Denotes first year for which figures include Alaska and Hawaii.
[1] Beginning 1957, includes Armenian Church of North America.
[2] Includes non-Protestant bodies such as "Latter Day Saints" and "Jehovah's Witnesses"; non-Christian bodies such as "Spiritualists," "Ethical Culture Movement," and "Unitarian-Universalists"; in 1966 and 1967, "Buddhists"; and in 1966, "Old Catholic and Polish National Catholic," and "Eastern churches."
[3] Included in "Protestant" category; not available separately.
[4] Includes Alaska.
[5] Includes only bodies with memberships over 50,000.
[6] The *Christian Herald* reported 1936 membership as 63,222,000.

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] Beginning 1923, includes membership in Alaska, and beginning 1927, in Hawaii. Beginning 1959, includes membership within jurisdiction of military ordinariate.
[2] In 1958, United Presbyterian Church of North America merged with Presbyterian Church in United States of America. Data for earlier years cover only the latter. See text.
[3] Beginning 1907, includes membership in Alaska and, beginning 1918, in Hawaii.
[4] Beginning 1951, includes membership in Alaska and, beginning 1954, in Hawaii. Excludes membership of Baptist Missionary Association beginning 1925; included prior to that time.
[5] Denotes first year of data for The United Methodist Church. See text.

Chapter H

Recreation (Series H 806-951)

H 806–951. General note.

The Department of the Interior issues various reports relating to recreation. The National Park Service publishes information on national parks in its monthly report (also issued cumulatively), *Public Use of the National Parks*, which gives visits; its semiannual report, *Areas Administered by the National Park Service*, which gives acreage; and its *National Parks and Landmarks*, which gives a brief description of each area and also covers sites eligible for registry as natural or national historic landmarks and non-federally owned national historic sites.

Data for municipal parks and playgrounds, as well as for other outdoor recreational activities, are compiled by the National Recreation and Park Association, Arlington, Va., which issues its *Recreation and Park Yearbook* at 5-year intervals, and its official publication, *Parks & Recreation*, monthly.

The Department of Agriculture's Forest Service, in its *Annual Report of the Chief*, issues data on recreational uses of the national forests.

Statistics on recreation have not been generally compiled and published in a systematic way. One major difficulty is that recreation, as a field of human activity and of social science research, has not been clearly defined in a manner accepted by all students. This general problem, and some of the consequent statistical problems, have been explored in the study by Marion Clawson, "Statistical Data Available for Economic Research on Certain Types of Recreation," *Journal of the American Statistical Association*, March 1959.

In general, many more data are available in the files of public agencies or private groups than have been published; and much of the publication is in forms not physically permanent nor likely to be preserved in libraries and other reference sources. The series presented here represent only the more readily available data. For many of these series, more detail for years prior to 1958, particularly for individual States and other geographic areas, may be found in a report by Marion Clawson, *Statistics on Outdoor Recreation*, Resources for the Future, Inc., Washington, D.C., 1958.

H 806–828. National parks, monuments, and allied areas—number, area, and visits, 1850–1970.

Source: 1850–1903, Marion Clawson, *Statistics on Outdoor Recreation*, Resources for the Future, Inc., Washington, D.C., 1958 (copyright); 1904–1970, U.S. National Park Service, *Areas Administered by the National Park Service*, annual issues, and *Public Use of the National Parks, A Statistical Report*, summary issues covering 1904–1940, 1941–1953, 1954–1964, and 1960–1970.

For 1850–1966, the estimates cover all areas administered by the National Park Service, some of which had previously been administered by the Department of Agriculture or by the War Department. These areas were established by congressional authority or by Executive order. Beginning 1967, estimates also cover areas authorized, but not yet in operation. Areas are tabulated according to their legal designation at the time of original tabulation. When designations were changed, numbers of areas and acreages in each series were shifted accordingly from that date forward but not retroactively.

Data do not include areas which are named national historic sites administered by States. Furthermore, a number of non-federally owned units in the United States and in the International Park north of Maine, which are deemed to be "administered" by the National Park Service by virtue of its involvement in their support, are included only in the count of areas.

Gross acres are reported for 1850–1934; federally owned acreage thereafter. Data on acreage are compiled from both official and unofficial reports, internal records, and memoranda, among which are many unresolved inconsistencies, particularly for the early years.

In many areas, visitors are required to pay an entrance fee, and an actual count of visitors or of cars is obtained. In other areas, visits must be estimated. Each person is counted each time he enters any area of the system. Hence, the number of visits is substantially in excess of the number of different individuals. No data are available on the latter. Data do not include visits to parts of the system which were not under National Park Service administration. After 1936, all areas which were a part of the system were administered by the National Park Service. In general, the use of these areas prior to 1936 was not extensive.

H 821–823, national recreation areas, exclude national seashore recreational areas, which are listed in series H 824–826, "national seashores." Also excluded (from both) are recreation demonstration areas which existed from about 1933 until 1952. In 1932, there were 46 such areas with a total acreage of 395,844. By 1952, all had been disposed of to States or absorbed into the national park system.

The records of the National Park Service also contain data on area and visits to each of the units of the national park system, at least for recent years and, in some cases, for years before 1904.

H 829–835. Recreational use of national forest lands, 1924–1970.

Source: 1924–1956, Marion Clawson, *Statistics on Outdoor Recreation*, Resources for the Future, Inc., Washington, D.C., 1958 (copyright); 1957–1965, U.S. Forest Service, *Report of the Chief*, annual issues, and unpublished data; 1966–1970, U.S. Department of Agriculture, *Agricultural Statistics*, annual issues.

A recreational use includes a stop of at least 15 minutes. Data do not include a count of persons who drove over highways through national forests but made no other use of the areas. For 1924–1964, use of a national forest area for recreation for a period of ¼ to 3 hours was counted as ¼ day; of 3–5 hours as ½ day; of 5–7 hours as ¾ day; and of 7–24 hours as a full-day use.

Beginning 1965, all Federal agencies responsible for administration of recreation use on public lands have reported on the volume of that use in terms of visitor-days, under the direction of the President's Advisory Council on Recreation and Natural Beauty. A *visitor-day* represents use of national forest land and water which aggregates 12 person-hours. It may entail 1 person for 12 hours, 12 persons for 1 hour, or any equivalent combination of individual or group use, either continuous or intermittent.

The downward trend of the data between 1965 and 1967 is believed to reflect more intensive standards of measurement rather than an actual reduction in use of the forest lands. Recreation specialists feel that estimates for those years would show a trend of increasing outdoor recreation use if the same standards of measurement had been consistently used during the first few years under the new system of use measurement.

As with the National Park Service data, series H 806–828, a visitor was counted each time he visited an area. Therefore, the number of different persons involved is substantially fewer than number of visits.

H 836–848. State parks—acreage, expenditures, funds, revenue, employees, and attendance, 1939–1970.

Source: 1939–1953 (except 1941 and 1946), U.S. National Park Service, *State Park Statistics*, annual issues; 1941, 1946, and 1954–

1962, U.S. Bureau of Outdoor Recreation, *State Outdoor Recreation Statistics—1962*; 1967 and 1970, The National Conference on State Parks, National Recreation and Park Association, Arlington, Va., *State Park Statistics, 1970* (copyright).

Many different kinds of areas and names are used to describe State-owned areas open for public recreation. The areas as defined in these studies exclude State forests and wildlife areas, some of which have important recreational facilities, and also exclude wayside areas if administered by State highway departments. The areas included vary in size from less than one acre each to well over 100,000 acres each.

Acreage data are based upon reports from most but not all States, the extent of the coverage increasing in more recent years. Total acreage, series H 836, refers to the land in State-owned recreation areas at the time of each State's reporting. Land acquired, series H 837, represents purchases, gifts, transfers from other State or Federal agencies, and other means of acquisition occurring during each State's fiscal year.

Funds available for expenditure include not only current appropriations, but also carryovers from previous appropriations; revenues from operations of concessions, entrance and parking fees; and revenues from other sources when these are available for expenditure.

Attendance data at recreational areas are often estimated, sometimes on various bases. Comparability of figures in series H 846–848 is somewhat marred by the transfer in California of numerous very popular beaches from State to county control. This acounts for the apparent drop in total attendance from 1947 to 1948, when, in fact, attendance was rising rather rapidly.

The data are based upon voluntary reports by State agencies; however, the same park agencies have not reported each year. The 1970 data were obtained through a questionnaire survey completed by 67 agencies that administer parks, recreation areas, historic sites, and related facilities in 47 States. Three State park agencies and three historical sites failed to report; in those instances, 1967 data were used. A number of State agencies throughout the nation that administer only one relatively small area are not included. Although the extent of the reporting has been variable, the more important States and agencies in terms of State park development have usually reported.

H 849–861. Municipal and county park and recreation areas—number, acreage, professional personnel, and selected facilities, 1910–1970.

Source: 1910–1955, Marion Clawson, *Statistics on Outdoor Recreation*, Resources for the Future, Inc., Washington, D.C., 1958 (copyright). National Recreation and Park Association, Arlington, Va., 1960 and 1965, *Recreation and Park Yearbook, 1961* and *1966*; 1970, *Parks & Recreation*, August 1971. (Copyright.)

Statistics on municipal and county park and recreation areas have been collected for many years by the National Recreation and Park Association (formerly National Recreation Association) of Arlington, Virginia, a private organization. Questionnaires are sent to all cities of 2,500 and over, to many smaller communities, and to all counties which are believed to have county park systems; and within each, to all agencies known or believed to have administration over parks or recreational programs. Provision of information is voluntary, and in spite of the best efforts of the Association, there is apparently a large degree of underreporting. In the 1940 and 1955 park surveys, for example, between 50 and 60 percent of all cities reported; however, the reporting was complete for the largest cities, fair for middle-size ones, and low for small ones. Many of the latter had no parks, but it is not possible to differentiate between those with no parks and those making no report. Perhaps as many as 90 percent or more of all parks are reported. In 1965, reports were received from 3,142 municipal and county agencies; in 1970, from 1,119.

Data from these surveys have been published in U.S. Bureau of Labor Statistics, *Park Recreation Areas in the United States*, Misc. Series Bulletin No. 462, 1928, and No. 565, 1932; George D. Butler, *Municipal and County Parks in the United States, 1935*, National Park Service and National Recreation Association; and the following National Recreation and Park Association publications: *Municipal and County Parks in the United States, 1940; Recreation and Park Yearbook—Midcentury Edition—A Review of Local and County Recreation and Park Developments, 1900–1950; Recreation and Park Yearbook*, published quinquennially since 1956; and other *Yearbooks* published annually for 1910–1940 and biennially for 1942–1950. In the published reports, no effort was made to correct for underreporting, but the number of cities reporting is shown.

H 862–877. General note.

The items included here were selected because they are of some importance, and data are available for them. Other items of perhaps equal importance have been omitted for lack of data or have been included in other chapters. For data on radio and television, for example, see series R 93–105.

H 862–864. Bowling, 1896–1970.

Source: American Bowling Congress, Milwaukee, Wis., *Bowling Magazine* (copyright), and unpublished data.

The data cover organized tenpin bowling leagues of the American Bowling Congress, the Women's International Bowling Congress, and the American Junior Bowling Congress.

H 865–867. Horseracing, 1949–1970.

Source: The National Association of State Racing Commissioners, Lexington, Kentucky, *Statistical Reports on Horse Racing in the United States*, annual issues (copyright).

The data cover thoroughbred, harness, and quarter horse racing as well as races at fairs. The source presents data separately for each category and also gives detailed breakdowns, by State, of revenue to States, parimutuel takeout and breakage, and money distributed in stakes and purses.

For data on attendance at thoroughbred racing only, 1940–1957, see *Historical Statistics of the United States, Colonial Times to 1957*, series H 518.

H 868–870. Major league baseball attendance, 1901–1970.

Source: **Series H 868–869,** The National League of Professional Baseball Clubs, San Francisco, *1971 National League Green Book*, p. 28, and The American League of Professional Baseball Clubs, Boston, *American League Red Book, 1971*, p. 49; **series H 870,** The Sporting News Publishing Company, St. Louis, *Official World Series Records, 1971*.

H 871. Number of golfers, 1947–1970.

Source: National Golf Foundation, Inc., Chicago, *Golf Facilities in the United States*, annual information sheets (copyright).

H 872. Boxing, gross receipts, 1944–1970.

Source: *The Ring*, Nat Loubet (publisher), New York (copyright).

The basic data are compiled from reports of State boxing commissions.

H 873. Motion pictures—average weekly attendance, 1922–1965.

Source: The Film Daily, New York, 1922–1957, *The Film Daily Yearbook of Motion Pictures*, 1959 edition, p. 105; 1958–1965, same report, various annual issues. (Copyright.)

H 874. Motion pictures—box office receipts, 1929–1970.

Source: Motion Picture Association of America, Inc., New York, unpublished data.

H 875–876. Paid hunting and fishing license holders, 1923–1970.

Source: 1923–1956, see source for series H 806–828; 1957–1970, U.S. Fish and Wildlife Service, mimeographed releases and *Federal Aid in Fish and Wildlife Restoration*, annual reports.

Additional data on number of nonresident licenses and amounts paid for licenses, by States, are shown in the source. The original data for 1923–1956 are from reports made by the various State game commissions or departments of the Fish and Wildlife Service, and released annually in mimeographed statements.

H 877. Outboard motors sold, 1919–1970.

Source: Boating Industry Association, Chicago, unpublished data.

These and other data on outboard motors, boats, and trailers, including some data by States for years prior to 1958 are summarized in *Statistics on Outdoor Recreation.*

H 878–893. Personal consumption expenditures for recreation, 1909–1970.

Source: Twentieth Century Fund, 1909–1927, unpublished data (prepared for *Survey of Time, Work, and Leisure*); U.S. Bureau of Economic Analysis (formerly Office of Business Economics), 1929–1963, *The National Income and Product Accounts of the United States, 1929–1965*; 1964–1970, *Survey of Current Business*, July issues.

For more detailed definitions of the specific series, see the BEA publications defining these series. The data represent market value of purchases of goods and services by individuals and nonprofit institutions. They exclude expenditures for clothing, transportation, food and drink, shelter, and other items, even though they were made primarily for the purpose of recreation. However, expenditures for most of these items are included in chapter G, the section on Consumer Expenditure Patterns.

The data for 1909–1927 are based on J. Frederic Dewhurst and Associates, *America's Needs and Resources: A New Survey*, Twentieth Century Fund, New York, 1955. Dewhurst in turn drew his data on recreation from William H. Lough, *High-Level Consumption*, McGraw-Hill, New York, 1935; and Julius Weinberger, "Economic Aspects of Recreation," *Harvard Business Review*, summer 1937.

H 894–898. Expenditures of U.S. tourists to foreign countries, 1861–1900.

Source: Matthew Simon, "The United States Balance of Payments, 1861–1900," National Bureau of Economic Research, New York, *Trends in the American Economy in the Nineteenth Century*, Studies in Income and Wealth, vol. 24, Princeton University Press, 1960, p. 673 (copyright).

Underlying assumptions and derivations of the estimates are discussed in detail in the source, p. 658 ff.

H 899–920. Passports, by characteristics of travel and travelers, 1905–1970.

Source: **Series H 899,** 1905–1911, U.S. Passport Office, unpublished data; 1912–1948, U.S. Senate Committee on Government Operations, *Reorganization of the Passport Office*, 84th Congress, 2d session, Report No. 1604, p. 25. All series, 1948–1970, U.S. Passport Office, *Summary of Passport Statistics*, various issues.

The number of passports issued and renewed represents an actual count for calendar years. Comparable data are available for fiscal years in source publications.

Data by characteristics of travel and travelers, compilation of which began in 1948, are based on a sampling of the passports processed. The figures have been adjusted, wherever practicable, to reflect, primarily, the travel characteristics of the non-Government traveler. No adjustments have been made for persons changing their travel plans after receiving their passports, nor for travel restrictions to any area listed on the application.

Users of these data are cautioned that, while the Passport Office tries to ensure that the selection of applications for sampling is a truly random process, the size of the sample has diminished markedly over the past 15 years in relation to the volume of passport applications from which it is drawn. This is true because the size of the sample has not changed appreciably over that period while the volume of issuances has more than quadrupled. Also, it should be noted that the volume of applications received varies throughout the year so that in June there may be four times the volume received in November while the number included in the sample remains fairly constant.

H 921–940. Travel to foreign countries—travelers and expenditures, 1919–1970.

Source: U.S. Office of Business Economics, **series H 921** and **H 924–927,** 1919–1946, *The Balance of International Payments of the United States, 1946–1948*, p. 72; **series H 931,** 1919–1939, *Survey of Current Business*, July 1954, pp. 14 and 15; **series H 932–938,** 1920–1938, same report, March 1950, p. 18, and May 1951, p. 21; **series H 931–938,** 1940–1944, *International Transactions of the United States During the War, 1940–45*, p. 61. U.S. Bureau of Foreign and Domestic Commerce, **series H 928,** 1919–1938, sum of series H 929–931; **series H 929–930,** 1919–1938, *Oversea Travel and Travel Expenditures in the Balance of International Payments of the United States, 1919–38*, p. 77; **series H 939–940,** 1919–1938, same report, p. 62. All other data, U.S. Bureau of Economic Analysis (formerly Office of Business Economics), *Survey of Current Business*, various issues (usually June or July).

H 941–951. Foreign visitors to the United States—number and receipts, 1919–1970.

Source: **Series H 941–944,** U.S. Immigration and Naturalization Service, special tabulation. **Series H 945,** 1919–1946, and **series H 946,** 1946, U.S. Office of Business Economics, *Survey of Current Business*, July 1954; **series H 946–951,** 1940–1944, same agency, *International Transactions of the United States During the War, 1940–45*, p. 61; **series H 948–951,** 1919–1938, U.S. Bureau of Foreign and Domestic Commerce, *Oversea Travel and Travel Expenditures in the Balance of International Payments of the United States, 1919–38*, p. 73; **series H 945–951,** 1947–1970, U.S. Bureau of Economic Analysis (formerly Office of Business Economics), *Survey of Current Business*, various issues (usually June or July).

H 941–944, visitors. The data for 1919–1932 include all classes of nonimmigrants except aliens returning to the United States to resume residence after a temporary stay abroad of less than one year. The data for 1933–1970 include only nonimmigrant aliens admitted as temporary visitors for business or pleasure, foreigners in transit through the United States, and students. The "area of origin" refers to the country of last residence.

H 945–951, receipts. The data cover essentially the same classes of travelers as the visitors data except that they include Canada and Mexico. They include receipts from foreign government personnel and foreign businessmen employed in the United States.

Series H 806–828. National Parks, Monuments, and Allied Areas—Number, Area, and Visits: 1850 to 1970

[For years ending Sept. 30 prior to 1941; thereafter, for years ending Dec. 31, or as of Jan. 1 of the following year. Includes areas in Alaska, Hawaii, Virgin Islands, and Puerto Rico]

NA Not available. Z Less than 500.

[1] Not the same as the "national park system." Definition of the latter has changed from time to time. For 1850–1962, series H 806–808 are merely totals of the other items listed; thereafter, totals include other national parks and allied areas not shown separately, as follows (as of year end or Jan. 1 of following year): 1970, 16 areas, 100 thousand acres, and 4,742 thousand visits; 1969, 13 areas, 94 thousand acres, and 2,415 thousand visits; 1968, 14 areas, 128 thousand acres, and 1,790 thousand visits; 1967, 10 areas, 48 thousand acres, and 2,393 thousand visits; 1966, 10 areas, 23 thousand acres, and 2,296 thousand visits; 1965, 1 area, 18 acres, and 1,673 thousand visits; 1964, 1 area, 18 acres, and 1,840 thousand visits; 1963, 1 area, 18 acres, and no reported visits.

[2] Beginning 1964, includes visits to the White House. Beginning 1965, series also available on visitor-day basis; see text, series H 829–835.

[3] Includes national historical parks, national military parks, national battlefields, national battlefield parks, national battlefield sites, national cemeteries, national historic sites, national memorials, and one national memorial park. Does not include historical areas established under the Antiquities Act of 1906 and designated national monuments, nor the White House.

[4] Includes visits to two National Recreation Areas adjacent to North Cascades National Park.

[5] Yellowstone National Park, the first national park, established 1872.

[6] Hot Springs Reservation set aside by the Federal Government in 1832 and established as a national park in 1921. Initial Federal acreage was much greater than indicated, but over a period of years was subdivided into tracts and sold, some 900-odd acres being permanently reserved to the Federal Government. These series begin with 1850, the first year following the establishment of the Department of the Interior.

[7] Beginning 1966, comprises approximately 700 units in and around Washington, D.C. Prior years also include 2 parkways as well as Catoctin Mountain Park and Prince William Forest Park.

Series H 829–835. Recreational Use of National Forest Lands: 1924 to 1970

[**In thousands.** Calendar-year data, except 1933–1938 for fiscal years. Includes U.S. outlying areas and Puerto Rico. For definition of "visitor-days," see text]

[1] Represents unimproved areas and all areas officially designated as "national recreation areas."

[2] Includes 2,584,000 visitor-days undistributed.

[3] Represents unimproved areas and a few public areas improved by non-Federal funds.

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] Excludes State forests, wildlife refuges, and waysides not administered by State park agencies.
[2] Detail may not add to total because some States did not report detail.
[3] In recent years, roughly three-quarters spent for improvements; the rest for land acquisition.
[4] Includes 836,086 camper days for primitive camps (few if any facilities) not previously included.

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available. Z Less than 500.
[1] Covers only men's bowling teams in leagues sanctioned by American Bowling Congress.
[2] Excludes Alaska and Hawaii for all years.
[3] Includes Hawaii for all years. Beginning 1963, includes Alaska and Guam. Excludes closed circuit TV receipts.
[4] Beginning 1960, includes multiple counting of license holders who bought 1 or more non-resident licenses as well as a license for their own home State.
[5] Excludes Colorado, Michigan, Minnesota, and Wisconsin.
[6] Production disrupted due to labor arbitration.
[7] Production disrupted due to material allocation under the Controlled Material Plan.

Series H 878–893. Personal Consumption Expenditures for Recreation: 1909 to 1970

[In millions of dollars]

Year	Total	Nondurable toys and sport supplies	Wheel goods, durable toys, sport equipment, boats, and pleasure aircraft	Radio and television receivers, records, and musical instruments	Radio and television repair	Admission to specified spectator amusements				Clubs and fraternal organizations, except insurance	Commercial participant amusements	Pari-mutuel, net receipts	Books and maps	Magazines, newspapers, and sheet music	Flowers, seeds, and potted plants	Other
						Total	Motion picture theaters	Theater entertainment (plays, operas, etc.) of nonprofit institutions, except athletics	Spectator sports

* Denotes first year for which figures include Alaska and Hawaii.

[1] Includes estimates for "Other" recreational expenditures.

[2] Represents only 42 percent of the national estimated expenditures for books and maps, and magazines, newspapers, and sheet music; the remaining 58 percent was classified as educational rather than recreational outlay.

– Represents zero. NA Not available. Z Less than 500.

[1] Data not entirely comparable because of changes in classifications.

[2] Includes "Personal business," "Join husband," "Accompany husband," and "Visit family"; through 1965, also includes "Business and pleasure."

[3] Includes "Sightseeing," "Vacation," "Visit," and "Tourist."

[4] Includes applicants formerly listed under "Employment" and "Commercial business"; beginning 1966, includes "Business and pleasure."

[5] Compilation of material by characteristics began on April 1, 1948; therefore, only 9 months information is available for calendar year 1948.

[6] Excludes small number not stated and world travel.

[7] Data not compiled; 99 percent of all applicants indicate air as mode of departure.

[8] Represents all travelers covered by passports issued or renewed.

[9] Includes passports issued to American seamen.

NA Not available.

[1] Excludes the following: Travel to Canada and Mexico; travel between conterminous United States and Alaska, Hawaii, Puerto Rico, and Virgin Islands; cruise travelers; military personnel and other Government employees and their dependents stationed abroad, and U.S. citizens residing abroad.

[2] Includes shore expenditures of cruise travelers; excludes travel expenditures of military personnel and other Government employees and their dependents stationed abroad, and U.S. citizens residing abroad.

[3] Excludes passenger fares of emigrant aliens.

[4] Beginning 1960, new series; not comparable with earlier years.

[5] Beginning 1965, Mediterranean Asia and Africa, and Eastern Europe included with "Other."

[6] Excludes transatlantic passenger fares. For 1919–1938, refers to expenditures by U.S. citizens; thereafter, by U.S. residents.

[7] Europe and Mediterranean included in "Other."

Series H 941–951. Foreign Visitors to the United States—Number and Receipts: 1919 to 1970

[Visitors data are for years ending June and, except for 1933 and 1934, exclude Canada and Mexico. Receipts data exclude transocean fares]

Chapter H

Crime and Correction (Series H 952-1170)

H 952–1170. General note.

In the United States there are many difficulties in drawing together national statistics on crime and correction. There is no one body of criminal law or procedure that relates to the United States as a whole. Under the U.S. Constitution, the police powers are reserved to the States. Thus, there are 50 sovereign jurisdictions of crime control in the 50 States in this country and a 51st in the District of Columbia which has a penal code and a criminal enforcement system provided by Act of Congress.

Federal criminal jurisdiction is something quite apart from State jurisdiction. Federal crimes are defined by Acts of Congress in connection with enforcing laws relating primarily to customs, taxation, and interstate matters. Therefore, except for offenses committed within the limited geographical area of a Federal reservation, crimes such as murder, robbery, burglary, larceny, rape, arson, etc., are juridically State crimes rather than Federal.

Within each State, the enforcement of the criminal law is predominantly the responsibility of local agencies. Police departments, prosecutors, and courts are in most instances either municipal or county agencies. To a large extent, even the correctional processes such as probation and misdemeanant imprisonment are functions administered by local authorities. Direct State responsibility is largely confined to providing penal institutions for those offenders convicted and committed to long-term imprisonment.

The inherent difficulties of collecting only the basic information about crime from hundreds of independent police departments, prosecutors, courts, and correctional agencies within a single State, not to mention the difficulties encountered in attempting to synthesize such information for the 50 States and the District of Columbia, have limited the development of adequate national compilations of criminal statistics.

Statistics on prisoners were collected by the Bureau of the Census in connection with each decennial Census of Population from 1850 to 1890. Independent enumerations of prisoners were made in 1904, 1910, 1923, and 1933. The first nationwide collection of criminal data on an annual basis was made in 1926 by the Bureau of the Census (a compilation of prisoners received and released from State and Federal prisons and reformatories). This agency published an annual summary and an analysis of these data from 1926 to 1946, and a very brief summary in 1947. Subsequently, the Federal Bureau of Prisons assumed this responsibility.

These annual reports have, from the beginning, covered most of the States, never less than 44 of the 51 jurisdictions plus reports from the Federal prison system, and have been consistent and complete enough to offer historical data that have some acceptable comparability (see series H 1135–1154).

The second annual nationwide collection began in 1930. Summary reports on serious offenses known to the police and arrests made by them were collected from a large number of police departments by the Federal Bureau of Investigation. Annual and semiannual statistics have been regularly issued ever since in *Uniform Crime Reports for the United States*. Because the sources of data for this series are cooperating individual police departments in all of the States, there have never been data available which represented complete reporting from all police departments in any one State. Further, the variability in procedure and practice in the reporting of crimes known to the police and the lack of uniformity in the definition of offenses are serious obstacles in compiling valid historical series on crimes and arrests in the United States as a whole.

A third collection of data on a national basis was made under the auspices of the Bureau of the Census in 1932 when reports were obtained from a number of States accounting for defendants prosecuted and convicted and sentenced in courts of general trial jurisdiction. The usual pattern throughout the country is that there is one such court in each county and there are over 3,000 counties in the 50 States. This series was continued for 15 years, and reports summarizing these data were issued annually by the Bureau of the Census under the title, *Judicial Criminal Statistics*. However, at no time were there more than 32 States involved in this reporting system. Partly because of its limited existence and incomplete coverage, its inclusion here is not justified. In addition, the variations from State to State and even within States from county to county that occurred in the reporting of the data created many unresolved questions of comparability and completeness.

H 952–961. Crimes and crime rates, by type, 1957–1970.

Source: U.S. Federal Bureau of Investigation, *Uniform Crime Reports for the United States*, annual issues.

The Uniform Crime Reporting Program is the outgrowth of a need for a national and uniform compilation of law enforcement statistics. A national program of collection of crime counts was initiated in 1930 by the Committee on Uniform Crime Records of the International Association of Chiefs of Police (IACP). In that same year, the Federal Bureau of Investigation was authorized as the national clearinghouse for statistical information on crime. Crime reports are solicited from law enforcement agencies throughout the Nation based on uniform classifications and procedures of reporting.

In the national Uniform Crime Reporting Program, contributing law enforcement agencies are wholly responsible for compiling their own crime reports and submitting them to the FBI. The FBI, in an effort to maintain quality and uniformity in the data received, furnishes training in Uniform Crime Reporting procedures to contributing agencies upon request. All contributors are furnished with the Uniform Crime Reporting Handbook which outlines, in detail, procedures for scoring and classifying offenses. The Handbook illustrates and discusses the monthly and annual reporting forms as well as the numerous tally sheets made available to facilitate the periodic tabulation of desired data.

On a monthly basis, law enforcement agencies (police, sheriffs, and State police) report the number of offenses that became known to them during the month in the following crime categories: Murder and nonnegligent manslaughter, manslaughter by negligence, forcible rape, robbery, assault, burglary, larceny, and auto theft. This count is taken from a record of all complaints of crime received by the law enforcement agency from victims, other sources, and/or discovered by officers. Whenever complaints of crime are determined through investigation to be unfounded or false they are eliminated from the actual count. The number of "actual offenses known" in these crime categories is reported to the FBI without regard to whether anyone is arrested for the crime, to whether the stolen property is recovered, to the local prosecutive policy, or to any other restrictive consideration. Law enforcement agencies report, on a monthly basis, the total number of these reported crimes which they clear either by arrest or exceptional means. A separate count of crimes cleared which involve only persons under the age of 18 is shown. The number of law enforcement officers killed and assaulted and the value of property stolen and recovered during the month are also reported.

Arrests are reported on an annual basis for all criminal acts except traffic violations, by crime category, including the age, sex, and race of each person arrested. A report is also submitted, by crime classification, concerning the number of persons formally charged and the disposition of such charges.

Uniformity of crime data collected under this program is of primary concern to the FBI as the national clearinghouse. With the receipt of reports covering approximately 10,000 jurisdictions, prepared on a voluntary basis, the problems of attaining uniformity are readily apparent. It is standard procedure to examine each incoming report for arithmetical accuracy, and for reasonableness, as a possible indication of errors.

Variations in the level and ratios among the crime classes established by previous reports of each agency are used as a measure of possible or probable incompleteness or changes in reporting policy. Necessary arithmetical adjustments or unusual variations are brought to the attention of the submitting agency by correspondence, which is the principal tool for supervision of quality. Not only are the individual reports studied, but also periodic trends for individual reporting units are prepared. Crime rates for all units are grouped for general comparability to assist in detecting variations and fluctuations possibly due to some reason other than chance.

The elimination of duplication of crime reporting by the various agencies is given constant attention. In addition to detailed instructions as to the limits of reporting jurisdictions between sheriffs and police in urban places, lists of urban places by county are furnished to sheriffs, county police, and, in some instances, State police organizations.

In 1958, a special committee was appointed by the FBI to study the 28-year old program. The consultant committee made 22 recommendations, most of which were incorporated in *Uniform Crime Reports for the United States*, beginning with the 1958 issue. The completed changes involved three major revisions in the presentation of data but no change in information collected from contributors. Broadly, format changes were (1) elimination of manslaughter by negligence and minor thefts from crime classes used as a crime index; (2) crime index totals for standard metropolitan statistical areas and for States; (3) crime rates based on current estimates of population for individual areas prepared by the FBI in line with suggestions by the U.S. Bureau of the Census. The entire report of the committee was published by the FBI in *Uniform Crime Reports for the United States*, Special Issue—1958.

Offenses in Uniform Crime Reporting are divided into two groupings designated as Part I and Part II offenses. Crime Index offenses are included among the Part I offenses. Offense and arrest information is reported for the Part I offenses on a monthly basis whereas only arrest information is reported for Part II offenses.

The Part I offenses are:

1. Criminal homicide.—(a) Murder and nonnegligent manslaughter: All willful felonious homicides as distinguished from deaths caused by negligence. Excludes attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides are limited to the killing of a person by a peace officer in line of duty and the killing of a person in the act of committing a felony by a private citizen. (b) Manslaughter by negligence: Any death which was determined by police investigation as primarily attributable to gross negligence of some individual other than the victim.

2. Forcible rape.—Rape by force, assault to rape, and attempted rape. Beginning 1958, excludes statutory offenses (no force used—victim under age of consent).

3. Robbery.—Stealing or taking anything of value from the care, custody, or control of a person by force or violence or by putting in fear, such as strong-arm robbery, stickups, armed robbery, assaults to rob, and attempts to rob.

4. Aggravated assault.—Assault with intent to kill or for the purpose of inflicting severe bodily injury by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids, explosives, or other means. Excludes simple assaults.

5. Burglary—breaking or entering.—Burglary, housebreaking, safecracking, or any breaking or unlawful entry of a structure with the intent to commit a felony or a theft. Includes attempted forcible entry.

6. Larceny—theft (except auto theft).—(a) Fifty dollars and over in value; (b) under $50 in value. Thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article which is not taken by force and violence or by fraud. Excludes embezzlement, "con" games, forgery, worthless checks, etc.

7. Auto theft.—Unlawful taking or stealing of a motor vehicle.

The Part II offenses are: Other assaults; arson; forgery and counterfeiting; fraud; embezzlement; buying, receiving, or possessing stolen property; vandalism; carrying or possessing weapons; prostitution and commercialized vice; sex offenses; violations of narcotic drug laws; gambling; offenses against family and children; driving while intoxicated; violations of liquor laws; drunkenness; disorderly conduct; vagrancy; all violations of State or local laws except as mentioned above; suspicion; curfew and loitering (juveniles); and runaways (juveniles).

H 962–970. Urban crime, by type of major offense, 1937–1957.

Source: U.S. Federal Bureau of Investigation, *Uniform Crime Reports for the United States*, Annual Bulletin, 1957, vol. XXVIII, No. 2, p. 85.

Figures are from the same 353 cities for each year. Their total population was 36.5 million in 1940 and 42.7 million in 1950. If a police department was known to have made major changes in its records procedures during the period covered, its reports were excluded.

Interpretation of these figures as reflecting a relatively exact measure of crime is somewhat questionable for the following reasons: The data came from 353 individual reporting areas scattered over the 48 conterminous States; there were differences among the States in the definition of some of these offenses; and there was improvement in reporting procedures on the part of some police agencies over this period of years. It is likely that the reports on murder and robbery are more reliable than those for other offenses because these two offenses were more clearly and consistently defined throughout the various States than were the other types of offenses shown.

See also data and text for series H 952–961.

H 971–986. Homicides and suicides, 1900–1970.

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States* and *Mortality Statistics*, annual issues.

Deaths were classified by cause according to the *Revision of the International Lists of Diseases and Causes of Death* that was in use for the years shown. Data for the entire United States were not available until 1933. For the years prior to 1933 this series includes deaths only for the death registration States of the respective years. For 1900, 10 States and the District of Columbia are included, comprising 26 percent of the population of the United States. As States were added, the registration area gradually grew to include approximately 50 percent of the population of the United States in 1910, about 80 percent in 1920, and the entire United States in 1933.

H 987–998. Police officers killed, by geographic divisions, 1945–1970.

Source: See source for series H 952–961.

See also text for series H 952–961.

H 999–1011. Persons arrested, by race, sex, and age, 1932–1970.

Source: See source for series H 952–961.

Arrest practices, policies, and enforcement emphasis vary from place to place and within a community from time to time. The volume of police arrests for certain unlawful conduct such as drunkenness, disorderly conduct, and violations of certain local ordinances is particularly influenced by such variations. Arrests for robbery, burglary, and other serious crimes are more likely the result of standard procedures. Although arrests are primarily a measure of police activity as it relates to crime, they also provide a useful index to indicate involvement in criminal acts by the age, sex, and race of the perpetrators, particularly for those crimes which have a high solution rate. Procedures used in the Uniform Crime Reporting Program require that an arrest be counted on each separate occasion that a person is taken into custody, notified, or cited. Arrests do not measure the number of individuals taken into custody since one person may be arrested several times during the year for the same or different offenses. This happens frequently for certain types of offenses against public order such as drunkenness, vagrancy, disorderly conduct, and related violations.

As a result of an expanded program beginning in 1960 to increase reporting areas, the number of agencies reporting arrests by sex and age exceeds the number reporting arrests by race. Consequently, the two sets of totals for arrests differ from 1960 on.

See also text for series H 952–961.

H 1012–1027. Criminal justice system—public expenditures, by level of government, 1902–1970.

Source: U.S. Bureau of the Census. Compiled from *Governmental Finances*, annual issues; *State Government Finances*, annual issues; *U.S. Census of Governments: Historical Statistics on Governmental Finances and Employment, 1957, 1962,* and *1967; Criminal Justice Expenditure & Employment for Selected Large Governmental Units, 1967–1968;* and (jointly with the U.S. Law Enforcement Assistance Administration) *Expenditure and Employment Data for the Criminal Justice System, 1969–1970.*

These statistics are the products of the Bureau of the Census governmental statistics program, which consists of a quinquennial census, recurrent surveys, and special studies done either as inhouse research or on a contractual basis. The data are obtained through a combination of field compilation, office compilation, and mail canvass. Field compilation is used for States and for large counties and cities; mail canvass and office compilation for the Federal Government, counties under 100,000 population, and cities under 50,000 population.

Definitions of the criminal justice functions have changed somewhat over the years. A classification scheme developed for use in the 1952 Census of Governments narrowed the scope of many functions. Beginning in 1967, public expenditure data for criminal justice activities were published separately for the first time. In 1969, expanded definitions of criminal justice functions were developed and, with some further refinement, are still in use.

Police protection is the function of enforcing the law, preserving order, and apprehending those who violate the law, whether these activities are performed by a police department, a sheriff's department, or a special police force maintained by an agency whose prime responsibility is outside the criminal justice system, but which has a police force to perform these activities in its specialized area (geographic or functional).

Included in this activity are regular police services, the maintenance of buildings used for police purposes and such specialized police forces (including public and private contract forces) as airport police, free and toll highway police, free and toll bridge and tunnel police, housing police, maritime police, park police, transit and other utility system police, college and university campus police, and alcoholic beverage control agents. Coroners and medical examiners are also included. Excluded are vehicular inspection and licensing, traffic safety and engineering, fish and game wardens, fire marshals, and the like.

The special police forces included in the data are only those which are part of general purpose governments. Security forces and building guards without the power to make a police arrest were excluded. Special police forces which are part of independent school districts or special districts are not included in the data, inasmuch as these districts are not general purpose governments.

At the county government level, both county police agencies and sheriffs' departments, where such departments exist, are included in the police protection sector, unless research has indicated that sheriffs have no substantial responsibility for police activities. The lack of needed information has prevented the consistent proration of expenditure or employment of sheriffs' departments where those departments are multifunctional.

Short-term custody and detention have traditionally been considered part of the "police protection" function and, prior to 1969, were treated as such. However, beginning 1969, the concept was modified on the basis of information obtained from the *1970 National Jail Census.* Data for institutions with authority to hold prisoners 48 hours or more are included in the "corrections" sector. Data for lockups or "tanks" holding prisoners less than 48 hours are included in the "police protection" sector.

Judicial activities encompass all courts and activities associated with courts such as law libraries, grand juries, petit juries, and the like.

In many States, statutes either require or permit local governments to supplement the salary of State-paid judges of major trial courts. In 1969, an attempt was made to count these judges and their total payroll only at the State level. However, this effort was not uniformly successful; nor was a similar adjustment attempted for prosecutors or public defenders who are also frequently paid by more than one government. For these reasons, the judges were counted in 1970 as part-time employees at both the State and local levels when actually receiving a check from both governments.

Correction is that function of government involving the confinement and rehabilitation of adults and juveniles convicted of offenses against the law, and the confinement of persons suspected of a crime and awaiting adjudication. Data for institutions with authority to hold prisoners 48 hours or more are included in this sector. Data for lockups or "tanks" holding prisoners less than 48 hours are included in "Police protection." Correction includes the operation of prisons, reformatories, jails, houses of correction, and other institutions. It also includes institutions, facilities and programs exclusively for the confinement of the criminally insane or for the examination, evaluation, classification, and assignment of inmates; institutions and programs for the confinement, treatment, and rehabilitation of drug addicts and alcoholics if the institution or program is administered by a correction agency of the criminal justice system; and pardon boards and parole and probation agencies, including resettlement or halfway houses for those not in need of institutionalization.

When a correctional institution maintains a prison industry or agricultural program, data on the cost of production or the value of prison labor used by agencies of the same government, if identifiable, are excluded (and classed as expenditure for the function using the products or services). Expenditure for the manufacture, production, sale, and distribution of goods produced for sale or use outside the government are included under this heading.

Legal services and prosecution includes the civil and criminal justice activities of the attorneys general; district attorneys, State's attorneys and their variously named equivalents; corporation counsels, solicitors, and legal departments with various names. It includes providing legal advice to the chief executives and subordinate departmental officers, representation of the government in lawsuits, and the prosecution of accused violators of criminal law. These activities are included whether performed by one office or several, since in some jurisdictions a single officer provides all legal services, while in others a prosecutor's office handles only criminal matters and a separate attorney's office performs all civil legal services. The operations of various investigative agencies having full arrest powers and attached to offices of attorneys general, district attorneys or their variously named equivalents are also included.

Indigent defense includes activities associated with the right of

persons to have legal counsel and representation, office of the public defender, and other government programs which pay the fees of court-appointed counsel. These include court-paid fees to individually retained counsel, fees paid by the court to court-appointed counsel, government contributions to private legal aid societies and bar association sponsored programs, and the activities of an established public defender office or program.

H 1028–1062. Lawyers—selected characteristics, 1948–1970.

Source: American Bar Foundation, Chicago, *The 1971 Lawyer Statistical Report,* tables 1–6 (copyright).

The source report is the sixth in the series of reports on the legal profession published by the American Bar Foundation. It includes the national statistics compiled by Martindale-Hubbell for the previous five American Bar Foundation reports and for two reports of the Survey of the Legal Profession which preceded the current series. Previous reports have been issued triennially since 1949. In making preparations for the sixth report, it was decided to postpone the 1969 report to take advantage of the 1970 decennial census. Future reports will be issued at appropriate intervals, probably every five years.

Martindale-Hubbell acquires its data in a variety of ways. The principal source of information is the questionnaire completed by thousands of members of the legal profession. In addition to the questionnaire, Martindale-Hubbell relies upon reports by its traveling field representatives, newspaper clippings, bar association rosters and publications, correspondence, and reports by the National Conference of Bar Examiners to maintain current information.

A lawyer, as defined by the *Martindale-Hubbell Law Directory,* is a person who has been admitted to practice law in one of the States or the District of Columbia, even though he may not be practicing.

All lawyers, series H 1028, is the closest available approximation of the actual number of lawyers. Lawyers reporting, series H 1029, represents lawyers listed in the *Law Directory.* A lawyer is listed if he, or someone closely identified with him, i.e., a partner or associate, provides the basic listing information or completes and returns a questionnaire to Martindale-Hubbell.

Lawyers not reporting, included in series H 1028, covers those lawyers failing to respond to the questionnaire. Since 1950, Martindale-Hubbell has endeavored to maintain accurate records for this category, but for various reasons these figures are undoubtedly in excess of the actual number of individuals who have been admitted to the Bar but who are unlisted in the *Law Directory.* Presumably the figures also reflect a number of deceased individuals.

Cities were classified into population groupings on the basis of official figures from the Census Bureau. Since the Census Bureau does not regularly supply estimated population figures for cities, the classification for 1963 and 1966 was based upon unofficial estimates from *Editor and Publisher Yearbook.*

A lawyer was classified as female if listed as "Miss" or "Mrs." or the given name indicated the individual to be a woman.

If a lawyer attended college and received a degree, he is included in both series H 1041 and H 1042. If the listing disclosed college but not a degree, he is counted in series H 1041. The same applies to law school, series H 1043 and H 1044. If the listing disclosed no educational data, the lawyer was tabulated in series H 1045.

Because some lawyers may engage in private practice and work for the government at the same time, the total for lawyers under "Status in practice" may exceed the total number of lawyers listed. From 1948 through 1954, all judges who maintained a private practice were tabulated in both categories; from 1957 through 1966, this practice was followed only for judges in cities of under 200,000 population, and, for 1970, cities under 250,000. U.S. Attorneys and Assistant U.S. Attorneys who also practiced law were tabulated in both categories in 1948 and 1951, but from 1954, they have been listed only in the Government category. Lawyers serving in the Armed Forces were tabulated in both categories from 1948 through 1954; from 1957, they have appeared only in the Government category. The criteria for classification of lawyers by status in practice follow:

Government. *Federal:* A lawyer who is either an elected or an appointed Federal official or employee other than a judge. Members of Congress were almost the only ones who were also tabulated under a private practice subdivision. *State:* A lawyer who is either an elected or appointed State official or employee other than a judge. Many individuals in this category were also tabulated under the appropriate private practice subdivision. *City or County:* A lawyer who is a county or local official or employee other than a judge. Except for officials in cities over 500,000, all individuals in this category who also practiced privately were listed in the appropriate private practice subdivision.

Judicial. *Federal:* A lawyer who is a Federal judicial officer, i.e., Justice of the Supreme Court, judge of a district court or a court of appeal, U.S. Commissioner, or referee in bankruptcy. *County or State:* A lawyer who is a judicial officer of a county or State, i.e., probate judge, circuit court commissioner, appellate court judge, or supreme court judge. *City:* A lawyer whose listing indicates that he is a local judicial officer, i.e., city judge, police magistrate, recorder, or justice of the peace. Judges and other judicial officers in cities under 200,000 population (under 250,000 in 1970) were also tabulated in the appropriate private practice subdivision.

Private practice. *Individual:* A lawyer who is practicing without partners. *Partner:* A lawyer who is a partner in a law firm. *Associate:* A lawyer employed by a law firm or an individual practitioner. An individual is listed as an associate in the *Law Directory* only if his employer publishes a professional card and identifies him as such. Some of the growth in this category reflects the continuing trend of subscribers to identify their associates.

Salaried. *Private industry:* A lawyer employed in either a legal or a non-legal capacity by a business concern. *Educational institutions:* A lawyer who is a dean, full-time faculty member, or employee in some other capacity of a college, university, or law school. *Other private employment:* A lawyer connected with a religious, charitable, trade, or other organization not within either of the two preceding subdivisions. Since lawyers in these subdivisions generally devote full time to their listed positions, they were not also tabulated under any private practice subdivision.

Retired or inactive. A lawyer who is actually retired or who could not be identified within the above categories.

H 1063–1124. General note.

Court statistics on criminal offenses and the outcome of prosecutions are incomplete for the country as a whole although data are available for many States individually. The only national compilations of such statistics were made by the Bureau of the Census from 1932 to 1945. At no time, however, were there more than 32 States involved in the reporting system.

Comprehensive information on the business of the Federal courts is collected by the Administrative Office of the U.S. Courts and is published in the *Annual Report of the Director* and in *Juror Utilization in United States Courts.* The bulk of civil and criminal litigation in the country is commenced and determined in the various State courts. Only when the U.S. Constitution and acts of Congress specifically confer jurisdiction upon the Federal courts may civil litigation be heard and decided by these courts. Whether a State court or a Federal court has jurisdiction over a particular action is often difficult to determine. Generally, the Federal courts have jurisdiction over the following types of cases: Suits or proceedings by or against the United States; civil actions between private parties arising under the Constitution, laws, or treaties of the United States; civil actions between private litigants who are citizens of different States; civil cases involving admiralty, maritime, or prize jurisdiction; all matters and proceedings in bankruptcy.

The Federal courts of original jurisdiction are known as the U.S. district courts. One or more of these courts is established in every

State and one each in Puerto Rico, the Virgin Islands, the Canal Zone, and Guam. Appeals from the district courts are taken to intermediate appellate courts of which there are 11, known as U.S. courts of appeals. The Supreme Court of the United States is the final and highest appellate court in the Federal system of courts.

H 1119–1124. Juvenile court—cases handled, 1940–1970.

Source: U.S. Social and Rehabilitation Service, *Juvenile Court Statistics, 1969* and *1970*.

From 1957 through 1969, national estimates on the number of juvenile delinquency cases disposed of by juvenile courts were based on data derived from a national sample of juvenile courts which, drawn from the Current Population Survey sample of the Bureau of the Census, was considered to be representative of the country as a whole. In 1970, taking advantage of the extremely high percentage of reporting coverage and in anticipation of developing a new national sample utilizing more current information from the 1970 decennial census, data from all courts reporting both for 1969 and 1970 provided the basis for the national estimates. All courts in the United States and those reporting for both years were stratified by the size of the population served by the courts. Estimates were made for each stratum, with the ratio of the population served by the reporting courts to the population served by all courts in the stratum used as an inflation factor. Prior to 1957, data were estimated by the Children's Bureau, based on reports from a comparable group of courts.

Dependency and neglect cases cover neglect or inadequate care on the part of parents or guardians; e.g., lack of adequate care or support resulting from death, absence, or physical or mental incapacity of the parents, abandonment or desertion, abuse or cruel treatment, and improper or inadequate conditions in the home.

Juvenile delinquency cases are those referred for acts defined in the statutes of the State as the violation of a State law or municipal ordinance by children or youth of juvenile court age, or for conduct so seriously antisocial as to interfere with the rights of others or to menace the welfare of the delinquent himself or of the community. This broad definition of delinquency includes conduct which violates the law only when committed by children; e.g., truancy, ungovernable behavior, and running away.

H 1125–1134. Persons in custody in training schools for juvenile delinquents and in detention homes, 1950, 1960, and 1970.

Source: U.S. Bureau of the Census, 1950, *U.S. Census of Population: 1950*, vol. IV, part 2, Institutional Population; 1960, *U.S. Census of Population: 1960*, Final Report PC(2)-8A, *Inmates of Institutions;* 1970, *U.S. Census of Population: 1970*, Final Report PC(2)-4E, *Persons in Institutions and Other Group Quarters*.

Persons under care or custody in institutions at the time of enumeration are classified as "inmate of institution" regardless of their length of stay in the place and regardless of the number of people there.

Institutions are a subcategory of group quarters. All persons not living in households are classified by the Bureau of the Census as living in group quarters. The nature of the service provided by an institution was the determinant for classifying inmates by type of institution.

Training schools for juvenile delinquents (including forestry camps for juveniles) are classified by the nature of their control into public or private institutions.

Public training schools for juvenile delinquents are readily identifiable institutions. The majority of them are State institutions operated by a State agency (i.e., departments of welfare, corrections, or institutions, or a youth authority). Some are operated by county and city governments. These public training schools are specialized institutions serving delinquent children, generally between the ages of 10 and 17, all of whom are committed to them by the courts.

Private training schools are those operated under private auspices. Some of the children they serve are committed to them by the courts as delinquents; others are referred by parents or social agencies because of delinquent behavior. A distinguishing factor between private and public training schools is that, by their administrative policy, the former can control their selection and intake.

Detention homes are institutions providing temporary care primarily for delinquent children pending disposition of their cases by a court. In practice, such institutions may be caring for both delinquent and neglected children pending court disposition.

In the 1960 census, the definition of "inmate of institution" was similar to that used in 1970 with the exception of the use of "length of stay" as a criterion for defining inmates in 1960. Differences in the classification and definition of inmates between the 1950 and 1960 censuses are minimal and the estimates for both dates are comparable.

H 1135–1167. General note.

Statistics of prisoners committed to penal institutions have been collected and published for a longer period of time than have other criminal statistics. Data on prisoners in Federal and State prisons and reformatories were collected annually by the Bureau of the Census until 1950. This work was transferred to the Bureau of Prisons in 1950 (and to the Law Enforcement Assistance Administration in 1971). Summary statistics covering persons received and discharged from State prisons and reformatories and from Federal prisons and persons executed in the United States under civilian authority are now published periodically by the Law Enforcement Assistance Administration in *National Prisoner Statistics*. Nearly every State publishes annual data either for its whole prison system or for each separate State institution.

H 1135–1143. Federal and State institutions—prisoners, 1926–1970.

Source: 1926–1938, U.S. Bureau of the Census, *Prisoners in State and Federal Prisons and Reformatories;* 1939–1970, U.S. Bureau of Prisons, **series H 1135–1140,** *National Prisoner Statistics*, Bulletin No. 47, April 1972; **series H 1141–1143,** same report, annual issues.

These data, as well as those shown in series H 1144–1154, are based on information reported for State prisons and reformatories and for Federal prisons with the following exceptions: No data were reported for Delaware or the District of Columbia prior to 1931. The New Castle County Workhouse was the only reporting institution for Delaware for 1931–1956 except for 1933 when no data were reported; beginning 1957, all State prisoners in Delaware were included,

except for 1968 when no data were reported. No data were reported in 1926 for Alabama, Florida, Idaho; in 1927 for Alabama; in 1928 for Mississippi, Idaho; in 1929 for Alabama, Georgia, Mississippi; in 1930 for Alabama, Georgia, Idaho. For 1931–1937, inclusive, no data were reported for Alabama, Georgia, or Mississippi. South Carolina was omitted in 1932. The Milwaukee House of Correction in Wisconsin is excluded in series H 1137 and H 1140 for 1937–1939; it is also excluded in series H 1143 for 1937–1946. In 1938 and 1939, all States except Alabama and Georgia were included. Rhode Island data include both misdemeanant and felony prisoners for all years except 1957 when only felony prisoners were included; no data were reported for Rhode Island in 1968, 1969, and 1970. Although there have been years since 1939 when two or three States did not report, the published data have been adjusted to include estimates for these missing States, 1939–1967. Hawaii has been included beginning 1960; Alaska has been excluded for all years. State figures were not adjusted for 1968–1970. No data were reported in 1968 for Arkansas; in 1969 for Arkansas, Indiana Reformatory, and District of Columbia Women's Detention Center; in 1970 for Arkansas and the Indiana Reformatory. A significant change was introduced in the series in 1940 by the addition of reports for nine Federal correctional institutions and two detention headquarters to the Federal totals. Also for 1939–1970, except in 1968 when no data were reported for North Carolina, series H 1137 and H 1140 include felony prisoners present at the end of the year and received from court for North Carolina Road Camps; series H 1143 excludes such prisoners except for 1957.

Institutions for adult offenders may include a sizable number of juveniles for certain States.

H 1144–1154. Federal and State institutions—prisoners released, by type of release, 1926–1970.

Source: U.S. Bureau of the Census, 1926–1946, *Prisoners in State and Federal Prisons and Reformatories.* U.S. Bureau of Prisons, 1947–1948, unpublished data; 1949–1970, *National Prisoner Statistics,* annual issues.

Data are for live releases. From 1935 to 1970, 2,306 prisoners died in Federal institutions; 33 of these were executions carried out during 1930 to 1967. In State institutions, there were 39,206 deaths from 1926 to 1970. Of these, 4,291 were executions. Most of these executions were carried out by State authorities; some by local authorities. The data on executions by State and local authorities are incomplete for 1926–1929.

All the limitations on completeness of coverage of series H 1135–1143 are also applicable for these series.

Series H 1144–1154 exclude escapees, temporary releases, etc.

H 1155–1167. Prisoners executed under civil authority, by race and offense, 1930–1970.

Source: U.S. Bureau of Prisons, *National Prisoner Statistics,* Bulletin No. 46, *Capital Punishment, 1939–1970,* August 1971.

Figures represent all executions occurring within the States whether they were carried out in a State institution or by local agencies. Executions by military authorities are excluded. The Army (including Air Force) carried out 160 executions (148 between 1942 and 1950; 3 each in 1954, 1955, and 1957; and 1 each in 1958, 1959, and 1961); 106 of the 160 were executed for murder (including 21 involving rape), 53 for rape, and 1 for desertion. The Navy carried out no executions during the period.

H 1168–1170. Persons lynched, by race, 1882–1970.

Source: 1882–1951, *1952 Negro Year Book,* William H. Wise and Co., p. 278 (copyright); 1952–1970, Tuskegee Institute, Alabama, Department of Records and Research, unpublished estimates.

Additional information and more detailed figures can be found in Arthur F. Raper, *The Tragedy of Lynching,* University of North Carolina Press, Chapel Hill, 1933, pp. 480–484, and James E. Cutler, *Lynch Law: An Investigation Into the History of Lynching in the United States,* Longmans-Green, New York, 1905, pp. 160–161. Raper presents statistics of lynchings for whites and Negroes for 1889–1932, based on the *Negro Year Book,* 1931–1932, and on material obtained from the Department of Records and Research, Tuskegee Institute. For 1916–1932, Raper's estimates agree with those shown here; but for all earlier years there are differences which are due to subsequent revisions made in the series by Tuskegee Institute. Cutler's estimates are based on the annual record kept by the Chicago Tribune (daily newspaper). Estimates shown here are for whites and Negroes only. During the period 1882–1903, Cutler found that 45 Indians, 12 Chinese, 1 Japanese, and 20 persons of Mexican ancestry had been lynched.

The *1952 Negro Year Book* presents a detailed discussion concerning the difficulty of defining the term "lynching." According to this source, "... agencies concerned about the lynching problem have not been able to come to a conclusive agreement even when using the same criteria in classifying cases of lynching." The same source refers to a conference held on December 11, 1940, at Tuskegee Institute which established the following criteria to cover persons considered as victims of lynching:

1. There must be legal evidence that a person was killed;
2. The person must have met death illegally;
3. A group must have participated in the killing;
4. The group must have acted under pretext of service to justice, race, or tradition.

★★★★★★★★★ **More Recent Data for *Historical Statistics* Series** ★★★★★★★★★

Statistics for more recent years in continuation of many of the still-active series shown here appear in annual issues of the *Statistical Abstract of the United States,* beginning with the 1975 edition. For direct linkage of the historical series to the tables in the *Abstract,* see Appendix I in the *Abstract.*

Series H 952-961. Crimes and Crime Rates, by Type: 1957 to 1970

[**In thousands, except rate.** Data refer to offenses known to the police. Rates are based on Bureau of the Census population data, excluding Armed Forces abroad]

Item and year	Total	Violent crime					Property crime			
		Total	Murder and non-negligent manslaughter	Forcible rape	Robbery	Aggravated assault	Total	Burglary	Larceny, $50 and over	Auto theft

[1] Each person arrested is counted rather than the number of charges filed against one person. Includes persons for whom age was not known. Prior to 1952, arrest data determined by examination of fingerprint cards.
[2] Prior to 1964, age breakdown 45–49 years.
[3] Prior to 1964, age breakdown 50 years and over.
[4] City arrest data.
[5] February 1 through December 31.

NA Not available.

[1] Includes lawyers not reporting and an adjustment (subtraction) for duplications.

[2] Includes duplicatons: 1948, 3,242; 1951, 4,147; 1954, 4,440; 1957, 4,506; 1960, 4,504; 1963, 5,918; 1966, 6,787; 1970, 8,834.

[3] 1948, 1940 Census of Population; 1951–1957, 1950 Census of Population; 1960, 1960 Census of Population; 1963 and 1966, unofficial estimates, *Editor & Publisher Yearbook;* and 1970, 1970 Census of Population. For 1970, refers to cities with population of less than 250,000, 250,000–499,999, and 500,000 or more, respectively.

[4] In some cases, if more than one subentry was applicable, the person was counted in each.

[5] Lawyers employed by individual practitioners or partnerships.

Series H 1063–1078. U.S. Supreme Court—Cases Filed and Disposed of During October Terms: 1940 to 1969

[For years beginning in June. Statutory term of Court begins first Monday in October but, for statistical purposes, new term begins upon adjournment of preceding term, usually in June]

Chapter J

Land, Water, and Climate

Land and Water Utilization (Series J 1-109)

J 1–2. Territorial expansion and land and water area **of** the United States, **1790–1970.**

Source: U.S. Bureau of the Census, Reports of Fourteenth, Fifteenth, Sixteenth, Seventeenth, Eighteenth, and Nineteenth Censuses, *Population,* vol. I, and unpublished data.

Boundaries of territories listed under United States were indefinite, at least in part, at the time of acquisition. Area figures shown here represent precise determinations of specific territories which have been marked upon maps, based upon interpretations of the several treaties of cession, which are necessarily debatable. These determinations were made by a committee consisting of representatives of various governmental agencies in 1912. Subsequently, these figures were adjusted to bring them into agreement with remeasurements made in 1960.

Area measurements within the United States began with the country as a whole and developed, as mapping progressed, to measurements for the States. The annual report of the U.S. General Land Office for 1850 contained the first reference to the areas of the States and Territories, although there was no indication of the method used in obtaining the measurements. In 1881, as part of the 1880 Census of Population, the Bureau of the Census laid the foundation for accurate and detailed area measurement in the United States. For the first time an account was given of the method and maps employed, the water bodies included, and the outer limits of the United States used as a basis for measurement. As part of the 1940 census, the Bureau published *Areas of the United States: 1940,* presenting data on the total land and water areas of the States, counties, cities, and minor civil divisions. For reports of the 1950 and 1960 censuses, adjustments in selected area figures were made for reasons of changes in boundaries, development of water reservoirs, or improvement in maps from which measurements are made.

"All other" (series J 1) includes the following islands with gross areas as indicated: Midway (2), Wake (3), Palmyra (4), Canton and Enderbury (combined area, 27), Swan (1), Navassa (2), Baker, Howland, and Jarvis (combined area, 3), Johnston and Sand (combined area, less than 0.5), Kingman Reef, Quita Sueno Bank, Roncador Cay, and Serrana Bank (each less than 0.5). Other possessions include the following islands for which area figures are not available: Caroline, Christmas, Danger (Pukapuka), Flint, Funafuti, Malden, Manahiki, Nukufetau, Nukulailai, Nurakita, Penrhyn, Raliahanga, Starbuck, Vostok, Phoenix Group (except Canton and Enderbury), and Union (Tokelau) Group, not enumerated in decennial censuses.

See also data and text for series A 1–5.

J 3–7. General note.

The U.S. Government acquired sovereignty over its present area through a series of international agreements and treaties. However, the Federal Government did not gain title to all of the lands covered by such agreements; title to much of the land was retained by individual States and their political subdivisions or by private owners.

"Original public-domain land" embraces all of the area to which title was vested in the U.S. Government by virtue of its sovereignty. Any of such lands which the Government has not disposed of under the public-land laws are generally referred to as "public-domain lands."

In addition to public-domain lands, the Federal Government has acquired by purchase, condemnation, and gift, tracts of land needed for various public purposes, such as sites for public buildings, defense installations, and natural resources conservation activities. Such lands are referred to as "acquired lands."

J 3. Public domain plus acquired land, 1802–1970.

Source: 1802–1950, U.S. Bureau of Land Management; 1955–1970, U.S. General Services Administration, *Inventory Report on Real Property Owned by the United States Throughout the World,* annual.

Series J 3 presents the total of public domain and acquired lands owned by the United States from 1802 through 1970, exclusive of any federally owned lands outside the United States. About 55 million acres of acquired lands are included in the 1970 estimate.

J 4–7. Acquisition **of** the public domain, **1781–1867.**

Source: US. Bureau of Land Management, *Public Land Statistics, 1970,* p. 4.

Series J 5 presents the original public-domain lands acquired from 1781 through 1867. During the period from 1781 through 1802, seven of the original 13 States relinquished to the Federal Government, by acts of cession, their claims to what was then described as "western lands." Roughly, the western lands covered the area north of the Ohio River and east of the Mississippi River and the area embraced by the present States of Alabama and Mississippi. The State of Maryland ceded the present area of the District of Columbia in 1788. In 1850, the State of Texas sold its land outside its present boundaries to the United States. During the period from 1803 through 1867, title to the remaining area west of the Mississippi River (except the State of Texas) and to Florida passed to the Federal Government. With the exception of land in the District of Columbia, the total of 1,808 million acres of land is vested in the United States Government as original public-domain land.

Series J 6 presents the areas of inland waters which were acquired with the original public-domain lands.

Series J 7, cost for State cessions, 1781–1802, is only for the purchase of the Georgia cession (56,689,920 acres) in 1802; see Thomas Donaldson, *The Public Domain, Its History, with Statistics, 1884.* Other cost data were obtained from U.S. Geological Survey, *Boundaries, Areas, Geographic Centers,* 1939.

J 8–15. General note.

Data shown are for fiscal years. For definition of public-domain lands and acquired lands, see text for series J 3–7. The laws which govern the management, use, and sale or other disposal of public-domain lands are known as the *public-land laws.* The policy of the Federal Government in the early years was to pass the public lands into private ownership as rapidly as possible. Congress passed thousands of laws providing for the disposal of the original public domain to States and their subdivisions and to private owners. Initially this was done to raise revenue and later to hasten the settlement and development of the country. Special laws provide for the disposal of surplus *acquired lands,* as, for example, the Surplus Property Act of 1944. By 1970, approximately 287 million acres of public lands had been patented to homesteaders, 328 million acres had been granted to States for various public purposes, 94 million acres had been granted to railroad corporations to aid in financing the construction of railroads, and about 434 million acres had been sold or otherwise disposed of.

J 8. Vacant public lands, **1904–1970.**

Source: U.S. Bureau of Land Management, *Public Land Statistics (Annual Report of the Director* prior to 1962), various issues, and unpublished data.

Data are estimates as of June 30 of each year.

The vacant public lands of the United States are public-domain lands (see text for series J *3–7)* which are not reserved for any purpose other than for reclassification and which are not covered by any non-Federal right or claim other than permits, leases, right-of-ways, or unreported mining claims. They are subject to acquisition by applicants under appropriate laws, such as the laws governing homesteads or grants to States. It is upon these laws for the most part that entries and selections (see text for series J 10–12) are made. The Bureau of Land Management administers the public-land laws relating to such entries and selections, a function transferred to it from the General Land Office as a part of Reorganization Plan No. 3 of 1946 (U.S. Congress).

Data prior to 1959 exclude Alaska. Unreserved lands in Alaska were withdrawn from any form of disposition under the public land laws by Public Land Order 4582 (January 17, 1969) which reserved the lands and resources until December 31, 1970, for the rights of native Aleuts, Eskimos, and Indians in Alaska.

J 9. Land granted by the United States to the several States, **1802–1959.**

Source: U.S. Bureau of Land Management, *Annual Report* of *the Commissioner of the General Land Office, 1946, Statistical Appendix,* pp. 108–119, and *Public Land Statistics, 1970,* p. 7.

See also *General Land Office Information Bulletin No. 1, 1939 series.*

Includes grants for such public purposes as the following: Educational, penal, and other public institutions and buildings; bridges, reservoirs, and other internal improvements; reclamation of swamp and arid lands; experiment stations; recreational areas; wildlife and forestry areas; military camps; and payment of bonds issued by local governments. Excludes 46,600,000 acres granted to States for aid in construction of railroads, wagon roads, canals, etc. (see series J 21–25). Does not include acreage of swamplands lost to the States, for which the States received indemnity in cash.

The data on land grants to the States for various public purposes are presented according to the calendar year in which the granting legislation was passed by the Congress. Some variation in the series is possible since the language of some of the statutes, including that of amendatory legislation, offers alternatives in the selection of the year to which individual grants could be assigned. As with the land grants for the construction of canals and other transportation improvements (series J 21–26), many of these grants were satisfied through delivery of evidence of legal title throughout the years.

J 10–12. Original entries and selections, final entries, and patents and certifications, **1869–1970.**

Source: 1869–1919, U.S. Department of Commerce, *Statistical Abstract of the United States,* various issues, 1879–1919; 1920–1970, U.S. Bureau of Land Management, *Public Land Statistics (Annual Report* of *the Director* prior to 1962), various issues.

The data on entries, selections, patents, and certifications refer to transactions which involve the disposal, under the public-land laws (including the homestead laws), of Federal public-domain lands to non-Federal owners. In general terms, *original entries* and *selections* are applications to secure title to public-domain lands which have been accepted as properly filed. Some types of applications, however, are not reported until the final certificate is issued and are, therefore, not included in series J 10.

Applications become *final entries* upon issuance of a *final certificate* which is given to the applicant after he has complied fully with the requirements of the laws relating to his application. These requirements may include, in particular cases, settlement upon and improvement of the lands entered, or payment of statutory fees or purchase money. A *final certificate* passes equitable title to the land to the applicant. With respect to certain State selections, no final certificate is issued. Such selections are, therefore, not included in series J 11 (final entries). *Patents* are instruments which pass legal title to the lands to the applicant. *Certifications* are issued in lieu of patents in connection with certain State selections.

The data do not include the area of certain lands which have been granted to the States to aid in the support of common schools. Title to such lands usually passes to the States upon survey of the lands by the Federal Government. Owing to legal complexities, detailed statistical records were not kept of these lands. Figures published here have been subjected to minor adjustments to improve comparability. They have not been checked, however, for internal accuracy or for strict comparability which would require analysis of supporting records. Data include disposals of lands in Alaska for all years.

J 13–15. Homestead entries, except on ceded Indian lands, **1863–1970.**

Source: Series **J 13,** 1863–1883, Thomas Donaldson, *The Public Domain, Its History, with Statistics,* 1884, pp. 351–355 (reprinted, Johnson Reprint Corporation); 1884–1970, U.S. Bureau of Land Management, *Public Land Statistics (Annual Report* of *the Director* prior to 1962), various issues. Series **J 14,** 1881–1945, U.S. Department of Commerce, *Statistical Abstract* of *the United States,* various issues; 1946–1970, U.S. Bureau of Land Management, *Public Land Statistics (Annual Report* of *the Director* prior to 1962), various issues. Series J 15, U.S. Department of the Interior, 1868–1940, *Annual Report of the Commissioner of the General Land Office, 1946;* 1941–1960, *Annual Report* of *the Director, 1961 Statistical Appendix;* 1961–1970, *Public Land Statistics, 1969* and *1970.*

For definitions of the terms *original entries* and *final entries,* see text for series J 10–12.

Figures for original homestead entries exclude applications which were accepted for lands ceded by the Indians to the United States with the provision that proceeds from their disposal would be covered into the Treasury to the credit of the Indians. Detailed statistics on such homestead entries were not published in the reports of the Commissioner of the General Land Office prior to 1924. Such reports contain general information as to the disposal of ceded Indian lands. The records upon which the reports were based are for the most part on file in the National Archives.

Acreage figures of final entries (series J **15)** do not include commuted homesteads. **A** *commuted homestead entry* is a homestead entry not exceeding 160 acres in connection with which the entryman pays the minimum statutory price for the land in consideration for reduction in residence and other requirements. Only certain classes of homestead entries can be commuted.

J 16–19. Lands under jurisdiction of Bureau of Indian Affairs, **1881–1970.**

Source: U.S. Department of the Interior: 1881–1897, 1900, 1903, 1910–1920, 1953–1958, *Annual Report* of *the Secretary* of *the Interior,* various issues; 1901, 1902, 1904–1909, 1939, 1940, 1942–1946, 1949, *Annual Report* of *the Commissioner* of *Indian Affairs* and *Statistical Supplements,* various issues; 1921–1930, 1932–1937, 1941, compiled by the Commissioner of Indian Affairs; 1959–1970, *Annual Real Property Management Report,* various issues.

Indian lands are the private landholdings of individual Indians or Indian tribes that are subject to special restrictive provisions of Federal law administered by the Bureau of Indian Affairs. They have been set aside for Indian use by treaties, congressional acts, and executive orders. Although most of these lands are in reservations for specific tribes, there are groups of scattered off-reservation allotments in individual ownership and other small tracts of land occupied by Indian groups.

J 20. Public land sales, **1800–1860.**

Source: Walter B. Smith and Arthur H. Cole, *Fluctuations in American Business, 1790–1860,* Harvard University Press, Cambridge, 1935 (copyright).

Data were derived from Hibbard, *A History of the Public Land Policies,* 1924, pp. 100, 103, 106, and from *Annual Report of the Commissioner of the General Land Office,* various issues. The data differ from those presented by Hibbard (p. 106) for the years after 1850, when Hibbard's data shift from calendar years to fiscal years ending June 30.

J 21–25. Public land grants by United States to aid in construction **of** railroads, wagon roads, canals, etc., **1823–1871.**

Source: U.S. Bureau of Land Management, *Annual Report of the Commissioner of the General Land Office, 19.46, Statistical Appendix,* pp. 100–107.

Figures include only the area of lands for which title passed to the grantee States and corporations. The exact extent of practically all of these grants was, owing to their terms, indeterminate at the time the granting acts were passed by the Congress. The procedures for the satisfaction of the grants generally required the grantees to submit lists of lands to which they requested evidence of legal title on the basis of the provisions of the authorizing legislation. This process of issuance of instruments of title has not been fully completed by the Department of the Interior; a relatively small area remains to be adjudicated.

For the series presented, the areas shown in the instruments of title which were issued for each grant over the years were totaled and shown as of the fiscal year in which the grant was *originally enacted,* even though in certain instances grants were revived at a later date after the expiration of statutory time limits while others were enlarged by subsequent legislation. Because the tabulation is based on instruments of title, the data do not reflect the area of those portions of grants which could not be satisfied under the law for various reasons or of those grants or portions of grants which were forfeited.

J 26–32. Revenues from public-domain, revested, and acquired land, **1785–1970.**

Source: U.S. General Land Office, 1785–1939, *Annual Report of the Commissioner, 1946, Statistical Appendix,* table 90. U.S. Bureau of Land Management, 1940–1946, *Annual Report of the Director, 1968, Statistical Appendix,* table 116; 1947–1960, *Public Land Statistics, 1962,* table 111; 1961–1970, *Public Land Statistics, 1970,* table 112.

Data for 1785 to 1956 are also available in a publication by Marion Clawson and Burnell Held, *The Federal Lands: Their Use and Management,* The Johns Hopkins Press, Baltimore, 1957, text table 8 and appendix tables 25 and 27.

Original data for 1785–1880 are from J. R. Mahoney, *Natural Resources Activity of the Federal Government,* Public Affairs Bulletin No. 76, Library of Congress, 1950.

Figures are for fiscal years and represent the total receipts of the General Land Office and Bureau of Land Management transferred to the Treasury for 1785–1970 and include the relatively small receipts from land and resources in Alaska. They do not include the receipts which other Government agencies realized from their operations on Federal lands, although they do include some receipts from lands under the administration of such agencies. For example, mineral leases for public-domain lands within areas administered by the National Forest Service were issued by the General Land Office, which also collected the mineral rentals, royalties, and bonuses from such lands. Also, for 1935 through part of 1940, the General Land Office collected grazing fees for lands within grazing districts; and, for 1908 through the first half of 1913, it collected water-right charges in connection with the Bureau of Reclamation irrigation projects. Other examples of multiple jurisdiction exist.

O & C lands are those areas granted to the Oregon and California Railroad Company in 1866. Later the Federal Government repossessed this land because the terms of the grant were not carried out. Sale of timber from the O & C lands amounted to $58.8 million in 1970.

J 33–34. Livestock permitted to graze **on** National Forest System lands, **1905–1970.**

Source: US. Forest Service, 1905–1965, annual reports and unpublished data; 1966–1970, *Annual Grazing Statistical Report,* annual issues.

Data are for the number of animals under paid permit (excluding "exempt provision" and "other paid permit" shown in the second source cited) and not necessarily the actual number grazed. Includes data for some Title III (Bankhead–Jones Act) lands transferred to the Forest Service for administration in 1954. In 1960, most of these lands were incorporated into the National Forest System.

J 35–40. Grazing on public-domain lands, **1935–1970.**

Source: U.S. Bureau of Land Management, *Public Land Statistics (Annual Report of the Director,* prior to 1962), various issues.

Data on grazing exclude grazing on reclamation land, land utilization projects where not part of a grazing district, O & C Iands (see text for series J 26–32 for definition of O & C lands), and Alaskan grazing; they include lands rented and sublet under the Pierce Act (43 U.S.C. 315M). Amount of grazing in districts (series J 38–40) includes free-use, crossing, and trailing permits in addition to regular paid use. Beginning 1964, it does not include nonuse permits or exchange-of-use permits for grazing district lands.

Grazing receipts are credited to the year received even though part of the period covered extends into the Pollowingyear. An animal-unit month represents the forage required to maintain five sheep or goats or one horse or one cow for a month.

J 41–49. Oil and gas leases **of** public-domain land — acreage, receipts, and output, **1920** to **1970.**

Source: Series J **41-43,** U.S. Bureau of Land Management, *Public Land Statistics,* annual issues. Series **J 44,** U.S. Geological Survey estimates derived by subtracting series J 45 from J 43. Series **J 45** and J **47-49,** U.S. Geological Survey, 1920–1944, unpublished data; 1945–1970, *Federal and Indian Lands Oil and Gas Production, Royalty Income,* and *Related Statistics,* June 1972. Series **J 46,** U.S. Geological Survey estimates based on computations of gasoline and butane on an equal basis with petroleum (42 gallons per barrel), and 6,000 cubic feet of natural gas equal to 1 barrel of petroleum.

Of the total public-domain acreage owned by the Federal Government in 1970 (706 million acres) about 9 percent was leased for oil and gas operations under the Mineral Leasing Act of February 25, 1920, as amended. Of the total number of leases under the supervision of the U.S. Geological Survey about 8 percent were in a producible status, producing oil, gas, and associated liquid products.

30 U.S.C. 226 specifies a minimum royalty rate of 12½ percent of the value of production removed or sold from oil and gas leases. Rates vary upward as high as 25 percent depending upon the royalty rate specified in the lease issued. Royalty on liquid products is net after an allowance for the cost of manufacture. The rental for nonproducing oil and gas leases varies from 50 cents per acre or fraction thereof for each lease year to **$2** per acre. The minimum royalty which is paid in lieu of rental at the expiration of each lease year after discovery is $1 per acre or fraction thereof.

J 50–80. General note.

Area measurements in the United States are performed in connection with the decennial censuses of population. They began with measurements for the country as a whole; and, as mapping progressed, included measurements for the States and later for counties and minor

civil divisions. Differences in the land area figures over time are due primarily to the more accurate determination of the outer limits of the United States, improvements in mapping and map measuring techniques, omission of certain bodies of water included in the earlier measurements, and increases in the area of artificial reservoirs. For total figures (land, water, and gross area) in square miles, 1790–1970, and sources of data, see series J 2.

Collection of land utilization statistics began with the census of 1850, when farmland was enumerated as "improved land" or "unimproved land." In 1890 and later census years, these inquiries were expanded and revised. After the turn of the century, collection of various land utilization statistics was begun by branches of the Department of Agriculture, while other contributions to the literature on this subject were made by numerous agencies, State universities, and individuals.

The census of agriculture is the primary source of data concerning land in farms in census years. Statistics concerning land not in farms are less complete, except for forest land, and have been collected by various interested agencies for individual items and for local areas by Federal, State, and private agencies and individuals. During the 1930's, studies by the National Resources Planning Board and assisting agencies contributed greatly to the available statistics on total land utilization. Since 1920, the Department of Agriculture's Economic Research Service and its predecessor agencies have prepared periodic inventories of land use.

Data on the utilization of farmland refer to the land use in preceding years except for 1954, 1959, 1964, and 1969. For 1850–1925, the data are chiefly estimates made by the former Bureau of Agricultural Economics based on the censuses of agriculture conducted by the Bureau of the Census. The estimates for 1930–1969 are from the census of agriculture, except for an adjustment made by the Economic Research Service in cropland harvested and other land in farms for 1950 through 1969. This adjustment was made to compensate for normal underenumeration of cropland and to obtain greater conformity with the total acreage of crops harvested as reported by the Department of Agriculture's Statistical Reporting Service and its predecessor agencies.

Acreages of nonfarm uses of land were estimated by the Economic Research Service and predecessor agencies from records and reports of State and Federal agencies concerned with management of public land, conservation of land, public services, and assessment of land for taxation.

Changes in total farmland for 1850–1969 represent in part changes in agricultural activity and in part more complete census enumeration and changes in census definition of *land in farms*. Land uses not reported by the Bureau of the Census and additions to census data for 1930–1969 are based largely on agricultural statistics assembled by the Department of Agriculture. Forest land inventories and grazing land studies during this period are believed to have improved the reliability of the estimates of these items for this period as contrasted with earlier years. Estimates for 1925 and prior census years for land not in farms are based on more limited evidence, such as available charts, maps, records, and reports on land areas and uses.

J 50–65. Land utilization, by type, **1850–1969.**

Source: U.S. Department of Agriculture, 1850–1900, *Major Uses of Land in the United States: Summary for 1954,* Agriculture Information Bulletin No. 168, 1957, pp. 36 and 37; 1910–1968, *Agricultural Statistics, 1972,* p. 506; 1969, *Major Uses of Land in the United States, Summary for 1969,* Agricultural Economics Report No. 247.

These data are based on estimates from Department of Agriculture publications as follows: *Major Uses of Land and Water in the United States, Summary for 1964,* Agricultural Economics Report 149, 1968; *Major Uses of Land and Water in the United States: Summary for 1959,* Agricultural Economics Report No. 13, 1962; *Major Uses of Land in the United States,* Technical Bulletin No. 1082, and Supplement, *Basic Land Use Statistics, 1950; Inventory of Major Land Uses, United States, 1945,* Miscellaneous publication *663,* 1948; *Pasture Land on Farms in the United States,* Bulletin No. 626, 1918; *Agricultural Yearbook, 1923,* 1924; and National Resources Board, *A Report on National Planning and Public Works ..., 1934.*

Total land area, as defined by the Census Bureau in 1940 and subsequent years includes "dry land and land temporarily or partially covered by water, such as marshland, swamps and river flood plains, .. (except tidal flats) ... streams, sloughs, estuaries, and canals less than 1/8 of a statute mile in width; and lakes, reservoirs, and ponds having less than 40 acres of area."

See also U.S. Bureau of the Census reports, *U.S. Census of Population,* vol. I, for 1920, 1930, 1940, 1950, and 1960; *Areas of the United States, 1940;* and *Area Measurement Reports* (for individual States, 1960 area), Series GE-20, 1964–1967.

Cropland used for crops includes cropland harvested, crop failure, and cultivated summer fallow. *Cropland idle or in cover crops* includes temporarily idle land as well as some poorer cropland abandoned for crop purposes and soil-improvement crops not harvested and not pastured. *Grassland pasture* includes cropland used only for pasture in the year indicated and all other nonforested pasture in farms. *Farm woodland* includes grazed or ungrazed farm wood lots or timber tracts, natural or planted, and cutover land with young growth, which has or will have value as wood or timber. Chaparral and woody shrubs are omitted. *Special uses in farms* includes farmsteads, farm roads, and farm lanes. *Other land in farms* includes miscellaneous unclassified uses and wasteland.

Nonfarm grazing land comprises the open grassland and shrub grazing lands and the woodland and forest area grazed. *Nonfarm forest land not used for grazing* excludes forested areas in parks, wildlife refuges, military areas, recreation sites, and arid woodland, brushland, and forest land used for grazing. *Special uses not in farms* includes urban areas, highways and roads, railroads, airports, parks and related recreational areas, wildlife refuges, and military reservations. *Other nonfarm land* includes various unclassified uses and unused areas such as desert, rock, swamp, and tundra.

J 66–80. Private and public land ownership, **by** major uses, **1920–1969.**

Source: U.S. Department of Agriculture, Economic Research Service. 1920, unpublished data; 1930–1954, *Major Uses of Land in the United States: Summary for 1954,* Agricultural Information Bulletin 168, 1957; 1959, *Major Uses of Land and Water in the United States: Summary for* 1959, Agricultural Economics Report 13, 1962; 1964, *Major Uses of Land and Water in the United States: Summary for 1964,* Agricultural Economics Report 149, 1968; 1969, see source for series J 50–65.

The figures were compiled from a number of Federal and State reports and records which reflect varying degrees of reliability. The figures used are applicable for different dates. All of them were assembled for some other purpose than that for which they are used here. The areas of all unsurveyed lands are estimated, and the areas of many lands based on surveys are subject to correction. Some of the data are not complete and are used merely for comparison. Therefore, although they are the best available, the figures given here are not strictly accurate, often not complete, and are not comparable among themselves. Nevertheless, they give some idea of the major features of land use and control for the country as a whole.

Private land is land held or owned by private individuals, groups, and corporations, and is generally used for private purposes. Indian lands held in trust and administered by the Federal Government for the benefit and use of groups or tribes of the Indian people are included in private land, as more than three-fourths of this land is used directly for farming and grazing by Indian farmers and stockmen. Much of the rest is leased for farming and grazing to other farmers and ranchers and the proceeds are received by the Indian owners.

Public land as used here is land owned or administered by Federal, State, county, municipal, or other governments for common or public purposes (e.g., highways, airports, national defense, flood control, water supply, forests, and parks). Public land frequently is used

for farming and grazing by private parties under a system of permits or leases. However, most of it is dry, rough, rocky, swampy, or otherwise unsuited for farming. When used by individuals, public land is sometimes included in reporting statistics on acreages in farms. More often, when public land is used in common by several persons, it is not reported as in farms.

J 81–91. Agricultural land drainage and irrigation, 1890–1969.

Source: U.S. Bureau of the Census. Series J **81–84,** 1920–1969, 1969 Census of Agriculture, vol. VI, *Drainage of Agricultural Lands,* 1969, p. X. Series J 85–91, 1890–1954, *Irrigation of Agricultural Lands, 1950,* and 1959; 1959–1969, 1969 Census of Agriculture, vol. IV, *Irrigation,* p. 2.

Drainage and irrigation are the two major reclamation means by which additional land can be brought under cultivation. Land that is drained greatly exceeds land that is irrigated in terms of acreage already developed. Drainage activities are concentrated in the North Central States and lower Mississippi Valley. Other highly drained areas are the Gulf Coast area of Texas, Southern Florida, and the Sacramento and San Joaquin River areas of California. Irrigation is practiced predominantly in the arid and semi-arid areas of the West. In recent years the acreage of irrigated land has stabilized in the Southwest and California because of the full utilization of existing water supplies whereas rapid expansion has occurred in Nebraska, Kansas, Oklahoma, Texas, and Florida. In irrigated areas, particularly areas where water is applied by flooding or by furrows and ditches, drainage is necessary to carry away excess water.

The Bureau of the Census has collected drainage and irrigation statistics by means of three censuses: (1) The censuses of agriculture which represent a direct enumeration of farms; (2) the special censuses of drainage projects; and (3) the special censuses of irrigation organizations. The censuses of agriculture have collected statistics on drainage on farms for 1920, 1930, and 1969, and statistics on irrigation on farms since 1890. The special censuses of drainage projects were taken decennially from 1920 to 1960 and collected information in only those States where projects existed. Changes in the method for collecting drainage statistics shifted the census year from 1970 to 1972 for the most recent census of drainage projects. The special censuses of irrigation organizations have been taken decennially since 1910 and collect information from irrigation organizations in those States where organizations exist. In addition, a special census of irrigation was taken in 1902; the statistics were published in 1904 in *Bulletin* 16 of the Census Bureau.

Drainage on farms. Statistics were collected from all farms in the 48 States and the District of Columbia in the censuses of agriculture for 1920 and 1930. For 1969, statistics were collected from all 50 States for farms with sales of $2,500 and over.

Drainage projects. The date of each special census of drainage projects was January 1, of the census year. The number of States covered in the five censuses of drainage projects taken between 1920 and 1960 has varied from census to census. The New England States, Pennsylvania, and West Virginia have never been included. The number of States included in each census are: 1920, 34 States; 1930, 35 States; 1940, 38 States; 1950, 40 States; and 1960, 39 States.

The special census of drainage projects has always been primarily a census of community or public drainage undertakings and of the larger private drainage undertakings. Variation in the methods employed and the scope of the census have had most effect on the number of projects covered but have not greatly affected the comparability of other items. The major changes have been, beginning with 1950, (1) the exclusion of projects of under 500 acres, (2) elimination in the enumeration of numerous projects which had been taken over by a later project, and (3) the consolidation into a single report of undertakings under common management; **and** in 1960, the elimination of drainage undertakings required solely because of the irrigation of the land.

Irrigation. For reasons of comparability, the irrigation data presented here are from the censuses of agriculture.

The States included for series J 87–89 are: Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming.

For series J 90–91, the 31 States included prior to 1959 are: Alabama, Arkansas, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin.

J 92–103. Estimated water use, 1900–1960.

Source: U.S. Department of Commerce, Business and Defense Services Administration, *Water Use in the United States,* 1900–1980, March 1960, and Bureau of Domestic Commerce, unpublished data.

These estimates of water use are based on estimates developed initially in 1948 but revised on the basis of information available from Federal surveys and censuses in 1954 and later years. The source publication (cited above) includes estimates of future requirements for 1965, 1970, 1975, and 1980.

The year 1954 was used as a benchmark because of the availability of detailed data on water use during that year, such as the 1954 censuses of manufactures and mineral industries; Inventory of Major Public Water Utilities; Survey of Water Use in Steam Generation of Electric Power by Public Electric Utilities; and Survey of Water Use by the Department of Defense. Adjustments were also made after comparison with surveys of water use by the U.S. Geological Survey in 1950 and 1955, and studies of projections of water requirements by several river basin committees and State water survey commissions.

Related data resulting from later studies have been published by the U.S. Water Resources Council in *The Nation's Water Resources,* 1968, and by the U.S. Geological Survey in a series of quinquennial reports, *Estimated Use of Water in the United States* (circulars 115, 398, 456, 556, and 676) covering the years 1950 through 1970.

J 104–109. Water wells in use, 1900–1962.

Source: U.S. Bureau of Domestic Commerce (formerly Business and Defense Services Administration), unpublished data. (Estimates for 1900–1955 are shown in chart form in Walter L. Picton, "The Water Picture Today," *Water Well Journal,* April 1956.)

In the formulation of these estimates, due consideration has been given to growth in population, the population served by public water supplies, the rural-farm and nonfarm self-served population, and the relative essential water facility requirements to serve them. In addition to population growth, the increase in per capita domestic water use, irrigation requirements, and industrial demands have been considered.

In the absence of measurable data, the level of activity in the field has been gauged by the process of deduction, utilizing the populations of rural and other areas not serviced by public water supplies.

Series J 1-2. Territorial Expansion and Land and Water Area of the United States: 1790 to 1970

[In square miles]

[1] Beginning 1960, includes acquired land in Hawaii. [2] Beginning 1959, includes Alaska. [3] Estimated from limited data available. [4] Data for Louisiana Purchase exclude areas eliminated by Treaty of 1819 with Spain. Such areas are included in figures for Mexican Cession. [5] Includes 33,920 acres subsequently recognized as part of State of Texas which is not a public-domain State. [6] Represents drainage basin of Red River of the North, south of 49th parallel. Authorities differ as to method and exact date of its acquisition. Some hold it as part of Louisiana Purchase; others maintain it was acquired from Great Britain. [7] See text.

NA Not available. Z Less than 1,000 acres. [1] Includes homesteads. [2] Previous to 1911 the data included, in addition to original entries and selections, some classes of final entries and patents. [3] Except on ceded Indian lands. [4] Exclusive of commuted homesteads. [5] The increase in area over 1925 was reported as the result of a "special check" of field office records which was "used as a basis for a complete revision of the vacant land statistics." [6] Grants of unsurveyed lands to Wisconsin for forestry purposes; area not determined.

Z Less than $50,000.

[1] Excludes revenues of earlier years totaling $21.4 million, which are included under "Miscellaneous." Annual data for years prior to 1947 are not available separately; cumulative totals are as follows (in millions): 1941-46, $8.8; 1931-40, $4.3; 1921-80, $7.5; and 1911-20, $0.8.

[2] Act of Feb. 25, 1920.

[3] Represents sales of Indian lands, grazing revenues, rental of land, mineral leasing under special laws, and other miscellaneous revenues. Also includes sales of timber for years prior to 1947 (see note 1).

Series J 33–34. Livestock Permitted to Graze on National Forest System Lands: 1905–1970

[1] Includes bonuses. Rentals are estimates derived by deducting royalties from total receipts.

[2] Calendar year data.

[3] Includes gasoline and butane on an equal basis with petroleum (42 gallons per barrel), and 6,000 cubic feet of natural gas equal to 1 barrel of petroleum.

[4] Beginning 1959, includes Alaska.

1890						3.717	54.136		3,632		85

[1] Data are from the censuses of agriculture, which represent direct enumeration of farms. Acreage drained figures in series J 82 are largely duplicated in series J 84.

[2] Data are from the special censuses of drainage projects.

[3] For 1910, 1920, and 1930, Arkansas and Louisiana only. For 1940, 1945, and 1950, 31 States and D.C. For 1954, 31 States. For 1959, 32 States including Hawaii. For 1964 and 1969, 33 States including Alaska and Hawaii.

[4] Data are for farms with sales of $2,600 and over (Classes 1-5).

[5] Recent changes in census procedures for collecting drainage project statistics have shifted the census year from 1969 to 1971 and limited the projects enumerated to publicly organized projects.

[6] Census date for Census of Drainage Projects is January 1, 1960.

[7] Includes 4,110,000 acres reported drained by irrigation organizations.

[8] Data interpolated from the special censuses of irrigation organizations for 1910 and 1920.

* Denotes first year for which figures include Alaska and Hawaii.
[1] Total take, including delivery losses but not including reservoir evaporation.
[2] Rural farm and nonfarm household and garden use, and water for farm stock and dairies.
[3] For 1900-1960, includes manufacturing industries, mineral industries, rural commercial industries, air conditioning, resorts, hotels, motels, military and other State and Federal agencies, and other miscellaneous uses: thereafter, includes manufacturing, mining and mineral processing, ordnance, and construction.

Chapter J

Climate (Series J 110-278)

J 110–267. General note.

Climate may be defined as the statistical summary of the state of the atmosphere at a given place for a given period of time. The "state" of the atmosphere properly includes many weather elements in addition to such influential ones as temperature, precipitation, and wind. Not all of them are given much attention, nor have they been adequately measured throughout the United States.

In view of the significance of ranges of climatic elements, mere arithmetic averages are usually unsatisfactory in specifying the state of the atmosphere, although the description of climate in much of the Nation has had to be so limited. Fully as significant, if less convenient to summarize, are the probability distribution and extreme values of individual weather elements, the joint frequency distributions of two or more elements, and certain specialized indices involving many elements. Such detailed information is available at cost from the U.S. Environmental Data Service, National Climate Center, Asheville, North Carolina, 28801.

Monthly and annual values of average temperature and total precipitation can be found in the following official Weather Service publications of the U.S. Weather Service (formerly the Weather Bureau):

Local Climatological Data, annual summary. This is issued annually for each of approximately 300 stations. With few exceptions, these are first-ordered Weather Service city and/or airport stations. The contents partially include normal values of temperature and precipitation, and comparative data for each month and year back to 1900 or the beginning of record, whichever is later. They also include a station history giving the various station locations and elevations of instruments.

Climatological Data, annual summary. This bulletin is issued annually by climatological sections. In most instances, a section is a State. Nearly all cooperative climatological stations as well as first-order Weather Service stations are included. This publication was founded in the 1880's, but was included as part of the Weather Bureau *Monthly Weather Review* from 1911 to 1913, inclusive.

Climatic Summary of the United States (Bulletin "W"). Monthly and annual series of total precipitation at all stations and mean temperature at selected (first-order) stations are also contained in this publication. Values from the beginning of record up through 1930 are given by geographical sections in the earlier Bulletin, published in the early 1930's. Values for later years are given in *Climatic Summary of the United States — Supplement* for *1931 through 1952,* by States, and in the *Supplement for 1951 through 1960.*

Length-of-record series of monthly and annual temperature, pressure, and precipitation up to 1940 may also be found in H. H. Clayton (ed.), *World Weather Records,* Smithsonian Miscellaneous Collections, vol. 79 (1944), vol. 90 (1944), and vol. 105 (1947). This series has been extended and published by the Weather Bureau in *World Weather Records, 1941 to 1950 (1959)* and *World Weather Records, 1951 to 1960* (1965). Temperature data are corrected for differences in daily observation time, and, being reduced to 24-hour means, differ somewhat in value from the same data appearing in Weather Service publications.

For daily data on extreme values, or on elements other than temperature and precipitation, see monthly editions of *Climatological Data* and, since 1948, *Local Climatological Data.*

"Reference climatological network." Since less than one percent of the total reporting network, suitably distributed, would be sufficient for sampling historical variations of climate in the Nation, it is potentially possible to select a network in which each station not only (1) possesses fairly long and unbroken records, but also (2) has suffered few if any relocations of instruments, (3) has a good ground exposure little influenced by environmental changes such as city growth or sheltering trees, and (4) is preferably operated by a public or private agency which, by reason of its own interest in the data, will ensure future perpetuation of the station.

A network which comes as nearly as possible to meeting these requirements is the "Reference climatological network." The latitude, longitude, and altitude of the climatological stations are given in table I.

Table I. Reference Climatological Stations

[Abbreviations: A. C.—Agricultural College; E. F.—Experiment Farm; E. S.—Experiment Station; N. P.—National Park; and Obs.—Observatory]

J 110–136. Reference climatological stations — normal monthly, seasonal, and annual temperature.

Source: U.S. National Weather Service, unpublished data (figures computed from monthly temperature data in *Climatological Data).* (Data for series J 111 appear in *Local Climatological Data,* but the temperatures there have been adjusted to values based on 24 daily observations and so are incompatible with other temperature data for that station given here.)

Nearly all weather stations have been moved several times in their history. Consequently, the Weather Service has adopted the practice of using "normal" values of temperature and precipitation for comparative purposes rather than long-term means which are derived from records taken at the several different locations the stations may have had over the years.

Normal values of temperature and precipitation are based on records for the 30-year period 1941 to 1970, inclusive. Where a station had a record for the entire 30 years from the same instrument site, monthly precipitation normals are the mean of the monthly values for the 30 years. For such stations, the temperature normals were obtained in a similar manner, using normal maximum and

normal minimum values to obtain monthly normals. The annual normal temperature is obtained by dividing the sum of the annual normal maximum value and the annual normal minimum value for temperature by 2.

For stations that did not have continuous records from the same instrument site for the entire 30 years, 1941 to 1970, the means have been adjusted to the record at the present site. In these adjustments, a "difference factor" was used for temperature and a "ratio factor" for precipitation. These factors were determined by parallel comparison, either between records at the actual station sites or through a second station that had a continuous record to compare against both sites for obtaining the resultant adjusting factors. Normals were thereafter obtained as outlined above.

This system of normals has three characteristics: **(1)** The 30-year period (1941 to 1970) adopted for the computations is consistent with the term of years accepted by the World Meteorological Organization for climatic normals; (2) where the station and exposure for records in a given locality have been changed, the whole record has been carefully studied and adjusted to the latest source of records and reports; (3) the normals for maximum and minimum temperatures are separately tabulated.

See also general note for series J 110–267.

J 137–163. Reference climatological stations—normal monthly, seasonal, and annual precipitation.

Source: See source for series J 110–136.

See also text for series J 110–136.

J 164–247. Reference climatological stations—temperature, precipitation, and description **of** year, 1884–1970.

Source: U.S. National Weather Service, *Climatological Data*, annual summaries.

The description of the year is given by three digits; the first digit applies to the year as a whole, the second applies to the summer season (June, July, and August), and the third applies to the winter season (December of the previous year, January, and February). The following code defines the meaning of each digit:

Code	Temperature	Precipitation
1	In warmest quartile	In wettest quartile
2	Near normal	In wettest quartile
3	In coldest quartile	In wettest quartile
4	In warmest quartile	Near normal
5	Near normal	Near normal
6	In coldest quartile	Near normal
7	In warmest quartile	In driest quartile
8	Near normal	In driest quartile
9	In coldest quartile	In driest quartile

For example, a code 5–1–9 indicates that, for a particular year and station, the annual mean temperature and annual total precipitation were both near normal (i.e., not within either extreme quartile of their distributions in the normal 1941–1970 period); but that the summer season was unusually warm and wet, while the winter season was unusually cold and dry.

Smoothed ogives of the distribution of average values in the 30-year normal period were used to obtain the upper and lower quartile limits of temperature and precipitation for each season and for the year as a whole. Any given quartile therefore separates approximately one-quarter of the number of years in the normal period, but probably more or less than one-quarter of the total years in any full length-of-record series owing to the presence of climatic trends or variations.

J 248–267. Long-record city stations—annual mean temperature and annual total precipitation, 1780–1970.

Source: Series **J** 248, **J** 249, **J** 252–257, **J** 259–267, 1780–1940, H. H. Clayton (ed.), *World Weather Records*, Smithsonian Miscellaneous Collections, vol. 79 (1944), vol. 90 (1944), vol. 105 (1947); 1941–1960, U.S. National Weather Service, *World Weather Records*, 1941 to 1950 (1959) and 1951 to 1960 (1965; 1961–1970, U.S. Environmental Data Service, *Local Climatological Data* (corrected to 24-hour means), annual editions. Series **J** 250, **J** 251, and **J** 258, *Local Climatological Data* and *Climatic Summary of the United States*, annual editions.

The series for city stations selected for presentation here are among the longest existing climatological series for the United States. They were selected with the realization that they are not homogeneous, but have comparative value in the earlier years and have been less frequently affected by changes of station location. The series, however, are not adjusted for known station changes, and coming as they do from growing cities, they contain climatic trends which in part are typical only of major metropolitan centers.

Each long-record station has suffered several changes of location and exposure of instruments. The following station history notes are extracted from the annual editions of *Local Climatological Data*, and indicate all known changes likely to have affected the temperature and/or precipitation records. The history of each station prior to the date of establishment by the Federal weather service is essentially unknown; occasional exposure changes in earlier years undoubtedly occurred whose effects, although significant, may never be discovered.

Records for two of the 10 stations shown refer in recent years to airport locations; the observation program in New Haven city terminated in 1943, and that in St. Paul-Minneapolis terminated in 1937. With one exception, all other records are continuously available from city locations although the major part of National Weather Service activities in each case has been transferred to airport stations. The exception is Santa Fe, where interpolations have been required to complete the city record in recent years.

In the following notes, "temperature means" indicate the combination of hourly temperature readings each day which were averaged together to form means. For example, 1/3 (7, 15, 21) indicates an average of readings at 7 a.m., 3 p.m., and 9 p.m. local standard time. The formula 1/3 (7:35, 16:35, 23) was in general use for 1870–1879 (Nov.), and the formula 1/3 (7, 15, 23) for 1879–1888, the times referring to the 75th meridian (Washington). Since about 1888, however, daily maximum and minimum temperatures, observed with special registering thermometers, have been averaged to obtain means.

Numbers in parentheses refer to elevations of the thermometers and rain gauge, respectively; the example (51/70) indicates the thermometers were 51 feet above ground, and the rain gauge funnel was 70 feet above ground (roof exposures). Asterisks (*) indicate that heights are estimated from circumstantial information; a question mark (?) indicates unknown.

Albany, N.Y. Temperature means: 1795–1796, unknown; 1813–1814, 1/3 (7, 15, 21); 1820–1870, 1/3 (7, 14, 21). Station established by Army Signal Service in Dudley Heights December 1873 (11/?); instruments moved July 1874 (17/1). Station moved 1.3 miles W March 1880 (51/70), 400 feet E October 1884 (80/100). Exposure changed July 1888 (84/99), October 1901 (102/100), October 1928 (107/100). Station moved 100 feet N April 1935 (97/88).

Baltimore, Md. Temperature means: 1817–1870, unknown. Station established December 1870 (34/69); thermometers relocated October 1885 (76/69). Station moved 0.1 mile January 1859 (86/78), 0.8 mile June 1891 (87/80), 0.7 mile September 1895 (120/116), 0.6 mile August 1896 (69/73), 0.8 mile January 1908 (100/91). Recording instruments only after July 1949 (100/90).

Charleston, S.C. 1788–1861, discontinuous records by various doctors. Temperature means: 1823–1872, unknown. Station established January 1871 (40/57); thermometers moved January 1886 (60/55). Station moved 0.2 mile N February 1897 (11/76); rain gauge moved July 1932 (11/8); thermometers moved August 1949 (6/8).

New Haven, Conn. Temperature means: 1780–1865, unknown but corrected to 24 hours; 1866–1872, unknown, monthly temperatures available to whole degrees only. Station established December 1872 (85/109); instruments moved February 1881 (118/110). Station moved 600 feet E March 1919 (74/68). City station closed and observations taken over by airport station 4 miles SE July 1943 (4/3).

New York, N.Y. (Central Park). 1822–1864, records from Jamaica, N.Y.; 1865–1868, records from 86th St. Reservoir, N.Y. Temperature means: 1822–1842, 1/3 (7, 14, 21); 1843–1870, 1/4 (Sunrise, 9, 15, **21).** Station established December 1868 (61/64); moved 1 mile N January 1920 (6/22).

Philadelphia, Pa. Temperature means: 1825–1870, unknown. Station established December 1870 (?/?); moved 0.3 mile E September 1871 (100*/91), 0.7 mile W February 1882 (54*/106*), 0.1 mile E April 1884 (169/167). Instruments moved February 1904 (117/114); thermometers moved January 1914 (124/114). Station moved 0.6 mile E December 1934 (175/166), and 0.7 mile W May 15, 1959 (155/166).

San Francisco, Calif. Temperature means: 1851–1853, 1/4 (Sunrise, 9, 15, **21);** 1854, 1/3 (9, 12, 21); 1857–1859, 1/3 (7, 14, 21); 1861–1868, 1/4 *(7,* 14, 21 weighted twice). Station established February 1871 (48/75); moved 0.5 mile SW September 1890 (109/101), 0.3 mile NE November 1892 (161/154), 3.1 miles W May 1906 (29/40), 3.0 miles E October 1906 (200/191). Instruments moved October 1914 (209/200). Station moved 1.0 mile SW May 1936 (112/104). Temperature probably affected at times by nearby ventilators April 1919–May 1936.

Santa Fe, N. Mex. Temperature means: 1849–1854, 1/4 (Sunrise, 9, 15, 21); 1855–1872, 1/3 (7, 14, 21). Station established November 1871 (30*/27*); moved March 1878 (5*/2*), March 1882 (50*/50*), November 1884 (35*/32*), January 1892 (53*/50*), March 1893 (42*/39*), July 1907 (5*/2*), April 1912 (52*/49*) March 1922 (34*/31*). Continued as cooperative station 0.5 mile NE September 1941 (39*/36*). Instruments moved May 1942 (5*/2*), October 1942 (23*/20*). Station moved about 1 mile SE May 1944, few hundred feet NW July 1947, 1 mile SE October 1950, about 0.3 mile NW October 1981, few hundred feet March 1954, 1.5 miles SE May 1955, and 2 miles SSE July 1960. Ground exposures, approximately (5/3), at last seven locations.

St. Louis, Mo. Temperature means: 1836–1870, unknown but corrected to 24 hours. Station established October 1870 (70/93). Several suspected changes of thermometer exposure; station then moved 0.2 mile WNW March 1873 (105/100), 250 feet E August 1903 (208/199), 300 feet E September 1913 (264/258), 0.4 mile SW November 1935 (179/172), and 1 mile SE July 1968 (6/4).

St. Paul, Minn. Records from Fort Snelling 1820–1855, from Minneapolis 1856–1858. Temperature means: 1820–1858, unknown; 1859–1870, 1/4 (7, 14, 21 weighted twice). Station established November 1870 (30/36); moved 0.2 mile WSW December 1871 (34/44), 0.2 mile ENE April 1878 (33/58), 0.2 mile NE April 1883 (45/61), 0.2 mile NNW July 1885 (103/92), 0.1 mile SE July 1904 (171/162). Instruments moved January 1911 (201/195), July 1918 (237/227). Station moved 0.3 mile W April 1931 (114/106). Record July 1933–April 1937 8.8 miles WNW at Minneapolis city (102/91); April 1937–December 1959 7.5 miles SSE at Minneapolis-St. Paul International Airport (43/41), January 1960–October 1962 (5/41), and November 1962–December 1970 (5/4).

J 268–278. Tornadoes, floods, and tropical cyclones, **1886** to **1970.**

Source: U.S. National Oceanic and Atmospheric Administration, *Climatological Data National Summary, Annual 1970,* pp. 55, 68, 94, and *Annual 1971,* **pp.** 740, *752,* 789.

The National Weather Service (formerly the Weather Bureau) issues warnings of tornadoes, floods, and tropical cyclones that threaten the United States mainland. "Tropical cyclone" is a general term for storms that form in the tropics. If the winds of a tropical cyclone are known to be 39 miles per hour or more, the circulation is called a tropical storm; when its winds reach 74 miles per hour, the storm is considered a hurricane. These winds are accompanied by heavy rains, high waves, and tides, and sometimes tornadoes, which are local storms of short duration formed of winds rotating at very high speeds, usually in a counter-clockwise direction. These storms are visible as a vortex, a whirlpool structure of winds rotating about a hollow cavity in which centrifugal forces produce a partial vacuum.

Whenever an area is likely to experience severe thunderstorms or tornadoes, the National Weather Service issues a *watch* bulletin. A severe thunderstorm or tornado *warning* bulletin is issued only when a severe thunderstorm or tornado has actually been sighted in the area or indicated by radar.

From 1916 to 1952, fewer than 300 tornadoes were reported in any one year. In 1953, however, when the U.S. Department of Commerce initiated its tornado forecasting effort, 437 tornadoes were observed and reported, beginning the first period of reliable statistical history. Since 1953, essentially complete tornado records have been available.

Through its special river and rainfall reporting network, the National Weather Service also issues flood warnings which provide time to evacuate low-lying areas, to move property and livestock to higher ground, and to take necessary emergency action. River forecasts based on atmosphere and hydrologic data are prepared by River Forecast Centers from reports of river stages and precipitation provided by a network of observing stations in each district.

More Recent Data for *Historical Statistics* Series

Statistics for more recent years in continuation of many of the still-active series shown here appear in annual issues of the *Statistical Abstract of the United States,* beginning with the **1975** edition. For direct linkage of the historical series to the tables in the *Abstract,* see Appendix I in the *Abstract.*

Chapter K

Agriculture

Farms (Series K 1-203)

K 1–203. General note.

Basic statistics on agriculture are, for the most part, prepared by the U.S. Bureau of the Census, which conducts the census of agriculture, and by the Statistical Reporting Service and the Economic Research Service of the U.S. Department of Agriculture, which prepare current estimates.

Annual agricultural statistics have been issued by the Department of Agriculture since May 1, 1863. Statistics compiled by the Statistical Reporting Service on crops, livestock and livestock products, agricultural prices, farm employment, and related subjects are based mainly on data obtained by mail and by personal interview of farmers and ranchers. Mailed questionnaires are returned from nearly three-quarters of a million respondents, mostly farmers. More than 50,000 farmers are interviewed to obtain agricultural data. They are located in almost all the counties in the United States and usually report on one or more items during a year.

Beginning 1840, a census of agriculture has been taken every 10 years and, beginning 1925, a mid-decade census of agriculture has also been taken. Census information was obtained by a personal canvass of individual farms until 1969, when for the first time the Census Bureau shifted to a questionnaire mailed to persons or organizations associated with agricultural operations in the Nation to be completed by them and returned by mail.

The first census was limited in scope. It included such items as an inventory of the principal classes of domestic animals, the production of wool, the value of poultry, the value of dairy products, and the production of principal crops. The number of farms and the acreage and value of farmland were first included in 1850 and information on farm tenure was first obtained in 1880. A detailed classification of farmland according to use was first obtained in 1925; in earlier censuses, farmland was classified only as improved land, woodland, and other unimproved land (see Chapter J). For brief discussions of the comparability of various agricultural data, census to census, see Bureau of the Census, *U.S. Census of Agriculture: 1969*, vol. II, chapter 1.

For each decade from 1840 through 1900, the census of agriculture was taken as of June 1. The five decennial censuses since then have been taken as of April 15, 1910; January 1, 1920; April 1, 1930, 1940, and 1950. The 1925, 1935, and 1945 quinquennial censuses of agriculture were taken as of January 1; the 1954, 1959, and 1964 censuses were taken during October and November. For the 1969 census the report forms were mailed to farm operators in the last week of December, 1969. The reports covered production and sales for the 1969 calendar year, with livestock inventories as of December 31, 1969. For 1969, data for farms with less than $2,500 are based on a 50-percent sample of these farms.

The definition of a farm has varied as follows from census to census:

For the 1959, 1964, and 1969 censuses, census farms comprised places on which agricultural operations were conducted at any time under the control or supervision of one person, a partnership, or a manager. Places of less than 10 acres were counted as farms if the estimated sales of agricultural products for the year amounted or normally would amount to at least $250. Places of 10 or more acres were counted as farms if the estimated sales of agricultural products for the year amounted or normally would amount to at least $50.

For the 1954 Census of Agriculture, places of 3 or more acres were counted as farms if the annual value of agricultural products for sale or home use (exclusive of home-garden products) amounted to $150 or more. Places of less than 3 acres were counted as farms only if the annual value of sales of agricultural products amounted to $150 or more. Places for which the value of agricultural products for 1954 was less than these minimums because of crop failure or other unusual conditions and places operated for the first time in 1954 were counted as farms if normally they could be expected to produce these minimum quantities of agricultural products.

If a place had croppers or other tenants, the land assigned each one was considered a separate farm, even though the landlord handled the entire holding as one operating unit in respect to supervision, equipment, rotation practice, purchase of supplies, or sale of products. Land retained by the landlord and worked by him with the help of his family and/or hired labor was likewise considered a farm.

For the 1950 Census of Agriculture, the definition of a farm was the same as for 1954. For the 1945 and earlier censuses, the definition of a farm was somewhat more inclusive. For 1925–1945, farms included (1) places of 3 or more acres on which there were agricultural operations and (2) places of less than 3 acres if the agricultural products for home use or for sale were valued at $250 or more. The only reports excluded from the 1925–1940 tabulations were those taken in error and those with very limited agricultural production, such as only a small home garden, a few fruit trees, a very small flock of chickens, etc. In 1945, reports for places of 3 acres or more with limited agricultural operations were retained only if (1) there were 3 or more acres of cropland and pasture or (2) the value of products in 1944 amounted to $150 or more.

The definition of a farm in the 1910 and 1920 censuses was similar to that used from 1925 to 1940 but was even more inclusive. In those years, farms of less than 3 acres with products valued at less than $250 were to be included provided they required the continuous services of at least one person. In 1900, there were no acreage or production limits. Market, truck, and fruit gardens, orchards, nurseries, cranberry marshes, greenhouses, and city dairies were to be included provided the entire time of at least one person was devoted to their care. For 1870, 1880, and 1890, no tract of less then 3 acres was to be reported as a farm unless $500 worth of produce was sold from it during the year. For 1860, no definition was given the enumerators. For 1850, no acreage qualification was given, but there was a lower limit of $100 for value of products.

K 1–3. Farm population, 1880–1970.

Source: 1880–1900, U.S. Bureau of the Census, Technical Paper No. 3, *Farm Population: 1880 to 1950*; 1910–1970, U.S. Department of Agriculture, Economic Research Service, *Farm Population Estimates, 1910–70*, Statistical Bulletin No. 523.

The estimates presented relate to the rural civilian population living on farms, regardless of occupation. For convenience, the term "farm population" is used without qualification, although the relatively few members of the Armed Forces living on farms are excluded. Beginning 1960, the farm population has been defined as all persons living in rural territory on places of 10 or more acres, if as much as $50 worth of agricultural products were sold from the place in the reporting year. It also includes those living on places of

under 10 acres, if as much as $250 worth of agricultural products were sold from the place in the reporting year. Prior to 1960, no specific criteria of acreage operated or value of products sold from a place were used to classify farm population. The change in definition in 1960 was largely stimulated by the fact that an increasing number of families whose livelihood was not gained directly from agriculture were living in the open country.

In the farm population, where the flow of migrants is responsive to many influences such as employment opportunities, mechanization, and technological advancements, migration becomes the dominant factor in population change, rather than the balance of births and deaths. Net change through migration, series K 3, includes not only those persons who made a physical move from farm to nonfarm areas, but also the loss that occurred when agricultural operations ceased on a place, and the occupants of the related dwelling units were reclassified from farm to nonfarm. Although exact figures are not available, actual migration is considered to be the larger of these two components.

The farm population estimates are based on data obtained from three principal sources: (1) The Current Population Survey (CPS) of the Bureau of the Census, which provides the annual estimate of the U.S. farm population; (2) the censuses of population, from which benchmark data for States, geographic divisions, and regions are derived; and (3) annual surveys of the farm population, conducted for the Economic Research Service by the Statistical Reporting Service, on which annual estimates of geographic distributions are based for intercensal years, and from which estimates of components of farm population change are derived annually. The Economic Research Service and its predecessor agencies conducted an annual survey of the farm population and its components of change from 1923 to 1969. Utilizing USDA's crop reporting system, reports were collected through a mailed questionnaire. Respondents reported on the number of persons who were living on their own and neighboring farms at the beginning and end of a specified 12-month period. They also reported on births, deaths, and changes through migration which occurred during this period.

Farm population estimates are based on USDA mailed-questionnaire survey data, tied to benchmark figures from complete censuses, and adjusted to total estimates of farm population obtained from the CPS. The reliability of these estimates is dependent upon the reliability of the U.S. estimate and the mail survey data. Annual estimates of the U.S. total farm population are obtained from the CPS. As these estimates are based on a sample, they may differ somewhat from figures obtained if a complete census had been taken using the same schedules, instructions, and enumerators. As in any survey work, the results are subject to error of response and of reporting as well as to sampling variability. The reliability of data from the mail survey alone cannot be assessed in terms of sample error. Reliability depends in part upon State-to-State variations in the size and representativeness of the mailing list, as well as upon variations in rate, representativeness, and accuracy of returns. In general, it should be noted that small figures, small changes, and trends over a short period of time may have less reliability than larger numbers and changes and trends over a period of several years.

K 4. Number of farms, 1850–1970.

Source: Census years, U.S. Bureau of the Census, *U.S. Census of Agriculture, 1964, General Report*, vol. II, p. 15, and *U.S. Census of Agriculture, 1969*, vol. II, chapter 3, p. 23; intercensal years, U.S. Department of Agriculture, Statistical Reporting Service, *Number of Farms, 1910–1959—Land in Farms, 1950–1959, by States*, Statistical Bulletin No. 316, *Number of Farms and Land in Farms, 1959–1970*, Statistical Bulletin No. 507, and annual supplements.

Comparability of data for census years is affected by varying degrees of underenumeration and by changes in definition of a farm (see general note for series K 1–203). Estimates for intercensal years are based on trend and indications of change in acreage and livestock surveys, in annual assessors' censuses in a number of States, in Agricultural Stabilization and Conservation records, and in other miscellaneous verifying data.

Data for Alaska and Hawaii are included except as noted.

K 5–9. Land in farms, 1850–1970.

Source: Census years, see source for series K 4; intercensal years, see source for series K 4 except 1911–1949, U.S. Department of Agriculture, unpublished data obtained by straight-line interpolations.

The acreage in each farm was allocated by the farm operator among the various land-use categories. Any acreage which had two or more uses during the year was classified according to the first use on the report form. For example, if a crop was harvested from an acreage and the same acreage was then pastured, the acreage was included as land from which crops were harvested but not as pasture.

Cropland includes cropland harvested, cropland used only for pasture, and all other cropland. Cropland harvested includes land from which crops were harvested; land from which hay (including wild hay) was cut; and land in small fruits, orchards, vineyards, nurseries, and greenhouses. Cropland used only for pasture includes all land used only for pasture or grazing that could have been used for crops without additional improvement, and all land planted to crops that was pastured before the crops reached maturity. All land used for rotation pasture and land in government diversion programs which was pastured is included. All other cropland includes cropland used only for soil improvement crops, land on which all crops failed, cultivated summer fallow, idle cropland, and land planted to crops to be harvested after the year covered by the census.

Pastureland includes land not classified as either cropland or woodland.

Information on farmland values in scattered local areas is found in P. W. Bidwell and J. I. Falconer, *History of Agriculture in the Northern United States, 1620–1860*, pp. 70–71, 242, and 328. Similar information for Southern States is found in L. C. Gray, *History of Agriculture in the Southern United States to 1860*, vol. I, pp. 403–406, and vol. II, pp. 640–645.

Data for Alaska and Hawaii are excluded except as noted.

K 10. Total value of selected items of farm property, 1850–1970.

Source: Census years, U.S. Bureau of the Census, *U.S. Census of Agriculture: 1935*, vol. III, chapter I, table 12, and chapter V, table 2; intercensal years, U.S. Department of Agriculture, Economic Research Service, compiled from *The Balance Sheet of Agriculture* and its successor, *The Balance Sheet of the Farming Sector*, annual issues, and *Farm Real Estate Market Developments*, annual issues and supplements.

Current market values of farm real estate, machinery and equipment, and livestock are combined in this series. Estimates of the value of farm real estate are based upon census reports and the annual index of farm real estate values, as described in series K 16. Inventory values for machinery and equipment and for livestock are based in part on census reports and supplemental estimates made by the Statistical Reporting Service and Economic Research Service.

K 11, 14, 15. Value of farmland and buildings, 1850–1970.

Source: Census years, U.S. Bureau of the Census, *U.S. Census of Agriculture, 1964, General Report*, vol. II, p. 22, and *U.S. Census of Agriculture, 1969*, vol. II, chapter 2, p. 20; intercensal years, U.S. Department of Agriculture, Economic Research Service, *Current Developments in the Farm Real Estate Market*, issued annually and sometimes biennially, and its successor, *Farm Real Estate Market Developments*, annual issues and supplements.

Figures for intercensal years are estimates derived by applying the change in the index of average value of land and buildings per acre to census benchmarks, recognizing changes in acres of land in farms. All farm operators were asked to estimate the market value of their farms in each census from 1850 through 1969. In the 1950, 1954, 1959, and 1964 censuses, data were obtained from all large farms and from a 20-percent sample of other farms. In the 1969 census, all operators who received a form were asked to estimate the present market value of land and buildings.

Average value of land and buildings per farm is obtained by dividing the total value shown by the number of farms, using rounded data.

Average value of land and buildings per acre is obtained by dividing the total value shown by the acres of land in farms, using unrounded data.

Data for Alaska and Hawaii are excluded except as noted.

K 12. Value of farm implements and machinery, 1850–1970.

Source: 1850–1900, U.S. Bureau of the Census, *Thirteenth Census, 1910, Agriculture*, vol. V, p. 51; 1910–1939, U.S. Department of Agriculture, Agricultural Marketing Service, unpublished data; 1940–1970, Economic Research Service, *The Balance Sheet of Agriculture, 1957, 1967*, and *1968*, and *The Balance Sheet of the Farming Sector, 1971*.

Figures for 1910–1970 represent inventory value at the beginning of the year. They are closely tied to the values presented in the censuses of agriculture, the figures for intercensal years being estimated from information on manufacture and sales with due allowance for wear and tear and then adjusted for changes in price levels.

The data for 1850–1900 are not entirely comparable. They covered periods of vastly different price levels and attendant investment values, including the period of expansion into the West. According to the source, however, "the data are sufficiently comparable to indicate in a broad way the agricultural progress of the country . . . ."

K 13. Value of farm livestock, 1870–1970.

Source: U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1952, 1967*, and *1972* editions.

Data cover all cattle, hogs and pigs, and stock sheep.

K 16. Index of average value of farm real estate per acre, 1912–1970.

Source: U.S. Department of Agriculture, Economic Research Service, *Farm Real Estate Market Developments*, August 1971, p. 48.

See also *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 6, for a more complete description of methods used and limitations.

This index, which is available also by States, is designed to measure changes in the market value of farm real estate, including land, buildings, and such other permanent improvements as are customarily included when farms are sold. The index is constructed from estimates of average value of farm real estate per acre obtained from the regular crop reporters of the Department of Agriculture. It is not based upon the value of farm real estate obtained in the census. Between 15,000 and 20,000 reporters supply estimates of the market value of farms per acre in their localities as of March 1 and November 1. Although they undoubtedly base their estimates in part upon actual sales, no sales data are used directly in computing the index. Averages for crop-reporting districts are weighted by acres of land in farms as taken from the 1945, 1950, 1954, 1959, 1964, and 1969 censuses to obtain weighted State averages which are, in turn, weighted by acres of land in farms to obtain regional and national averages. The weighted dollar values per acre are then expressed as index numbers.

Data for Alaska and Hawaii are excluded.

K 17–81. Farm population, farms, land in farms, and value of farm property and farm products sold, by State, 1850–1969.

Source: Farm population and number of farms, see source for series K 1–3. All other items, U.S. Bureau of the Census, *U.S. Census of Agriculture: 1925*, Summary Statistics, by States; *1945*, vol. II; *1950*, vol. II; *1954*, vol. II; *1959*, vol. II; *1964*, vol. II; and *1969*, vol. II.

See text for series K 4–16.

Data for the value of farm products sold in 1969 were obtained by direct questioning. This procedure was a departure from the one used in previous censuses, in which data on value of sales were obtained by enumeration for some products and by estimation for others.

For 1969, value of farm products sold excludes income which the farm operator and members of his family received from providing hunting, fishing, picnicking, camping, boarding and lodging, or other recreational services on his farm; for 1964 and prior censuses, recreation income was included. The value of farm products sold does not include government payments received by farm operators for participation in wheat, feed grains, and other government programs.

K 82–108. Characteristics of farm operators, 1880–1969.

Source: U.S. Bureau of the Census, *U.S. Census of Agriculture: 1964*, vol. II, chapter 5, and *1969*, vol. II, chapter 3.

The term "farm operator" is used to designate a person who operates a farm, either doing the work himself or directly supervising the work. He may be the owner, a member of the owner's household, a salaried manager, or a tenant, renter, or sharecropper. If he rents land to others or has land worked on shares by others, he is considered as operator only of the land which he retains for his own operation. In the case of a partnership, only one partner is counted as an operator. For census purposes the number of farm operators is the same as the number of farms. A farm operator may spend a few hours a week on a "farm" producing only a few hundred dollars worth of farm products while partly or fully employed elsewhere, or be working full time as operator of a "farm" producing hundreds of thousands of dollars worth of farm products a year.

Classification by race of the farm operator was first made in the census of 1900. Since 1900, the race classification has consisted of two major groups, "white" and "all other," and for a limited number of items, a more detailed breakdown by race. The detailed breakdown, since 1954, has provided for a separate count of Negro and other races. For decennial censuses prior to 1954, separate totals are available for Negro, Indian, Chinese, Japanese, Filipino, and other races.

Farm operators were classified by residence on the basis of their reporting whether or not they lived on the farm operated. Data as to residence of the farm operators have been collected for the last seven censuses of agriculture, beginning with 1940. Except for 1964, when the instructions were to include operators who lived on the farm "any time" during the year, the inquiries have been similar and no time limitations were used. The instructions used for 1964 did not have a significant effect on the comparability of the 1964 data with other censuses.

Data on age of farm operators have been obtained in each of the decennial censuses beginning with 1910 and also in the censuses of agriculture for 1945, 1954, 1959, 1964, and 1969. No data on age of operators were obtained in the censuses of 1925 and 1935. For both 1964 and 1969, the operator's age was imputed if it was not reported. Tabulated data for 1964 and 1969, therefore, show an age for each farm operator. The number of operators for which age was not reported are shown for prior censuses. Average age of operators was tabulated in 1945 and 1954 through 1969.

The data for years on present farm reflect the continuity of operators on particular farms. They do not refer to years of farm experience. Information for years on farm has been obtained for each census of agriculture beginning with 1910. In the censuses of 1925, 1930, and

1950 through 1964, the inquiry called for the month as well as the year of occupancy. For 1935, 1940, and 1945, only the year of occupancy was asked. The report forms for 1910 and 1920 asked for the number of years and months the operator had operated the farm occupied at the time of the census. For each census, the data for years on farm have been summarized by groups of "years on present farm." The number of years or months comprising these groups of "years on present farm" have not always been the same, largely due to changes in the date of census enumeration. The group "less than 5 years" has been subdivided for some censuses. The difference between censuses in elapsed time from the beginning of the calendar year to the date the census reports were completed affects the data for the year-on-present-farm group "less than 5" years more than for groups "5 to 9" years and "10 or more" years.

Information on work off the farm by farm operators has been obtained for each agriculture census beginning with 1930. Farm operators reporting off-farm work vary from those who supplement their farm incomes with odd or spare-time jobs to those operators who have regular nonfarm jobs and use the farm to supplement their regular income or as a residence. The operators with odd or spare-time jobs usually consider their nonfarm employment to be of secondary importance; they may work part time on someone else's farm or work at seasonal nonfarm jobs. Many persons who may be employed in cities or have other regular nonfarm jobs live in rural areas and conduct sufficient agricultural operations for their places to meet the definition of a farm. Some use the farm income to supplement their regular nonfarm income. Some farm operators working off their farms may be using their nonfarm income as a source of capital for expanding their farming operations. For 1964 and 1969, data are tabulated only for those operators reporting one or more days of work off the farm. For 1959, farm operators reporting "none" for days of work off farm and those not reporting off-farm work were not tabulated separately. For 1930 through 1954, data are given separately for farm operators reporting "none" for days of work off farm.

For the most part, data from the 1969 census and earlier censuses are comparable. However, a difference in timing and the change from personal interview to mail enumeration affect the comparability of some of the 1969 data with those from earlier censuses. The 1969 census forms were mailed just prior to January 1, 1970. Extensive mail, telephone, and enumerator followup procedures extended the data-collection phase through September 1970. Prior censuses were taken by enumerators, each assigned to a specific geographic area. Field work for the 1964 census was completed largely in November and December 1964, while most of the field work for 1959 was accomplished during October and November. In censuses prior to 1959, the time of enumeration varied from late fall to April 1 to January 1 and even to June 1.

K 109–153. Farms, by race and tenure of operator, and acreage and value, by tenure of operator, 1880–1969.

Source: U.S. Bureau of the Census, *U.S. Census of Agriculture: 1954*, vol. II, pp. 956 and 958; and *1969*, vol. II, chapter 3, pp. 11 and 14.

See also text for series K 17–81.

Data on farm-operator status were not obtained until the census of 1880. Studies of land tenure before 1860 are based, necessarily, upon fragments of information. See Bidwell and Falconer's *History of Agriculture. . .*, and Gray's *History of Agriculture. . .* (see text for series K 5).

The 1900 Census of Agriculture covered the ownership of rented farms, with particular reference to absentee ownership and the concentration of ownership. On a sample basis, the Department of Agriculture made a study of ownership of rented farms in 1920; the results were published as *Bulletins 1432* and *1433*. The Bureau of the Census and the Department of Agriculture cooperated on sample surveys in 1945, 1950, and 1954 which were designed to show the portion of all farmland owned by each major class of owner. The results of these studies were published in Department of Agriculture, *Agricultural Economics Research*, vol. V, No. 4, 1953, and in Agricultural Research Service and Bureau of the Census, *Graphic Summary of Tenure, 1954*. A complete study of farmland ownership in the United States was made in 1945 and published as Department of Agriculture, *Miscellaneous Publication No. 699*.

In 1916, the Bureau of the Census published *Plantation Farming in the United States* from a 1910 census study of plantations in 325 selected counties in 11 Southern States. In the selected plantation area, 39,073 plantations were reported as having 5 or more tenants. Another study of plantations was made in connection with the 1940 census, but the results were not published. In 1947, the Bureau of the Census published *Multiple Unit Operations* from a study made in connection with the 1945 Census of Agriculture. The Bureau has also published volumes on multiple unit operations from the 1950 and 1954 censuses of agriculture. In 1924, the Bureau of Agricultural Economics issued *Department Bulletin 1269*, the results of a study by C.O. Brannen, *Relation of Land Tenure to Plantation Organization*.

For the censuses of 1880 and 1890 only the number of farms was classified by tenure. Classifications by the race of the farm operator and crossclassifications by race and tenure were first made in the census of 1900.

A farm operator, according to the census definition, is a person who operates a farm, either performing the labor himself or directly supervising it. The census definition of a farm is based on operating units, rather than ownership tracts. A farm may consist of a number of separate tracts held under different tenures, some owned and some rented. Similarly, when a landowner has several tenants, renters, or croppers, the land operated by each is considered a separate farm. Therefore, the number of farm operators, for all practical purposes, is identical with the number of farms, series K 8, and these items are used interchangeably.

In the race classification of farm operators, Mexicans are reported as white. The Negro and other race group includes Negroes, Indians, Chinese, Japanese, and other races not classified as white.

Each farm was classified according to the tenure under which the operator controlled the land. Land was considered owned if the operator or his wife held it under title, homestead law, purchase contract, or as one of the heirs or as trustee of an undivided estate. If both an owned and a rented tract were farmed by the same operator, the tracts were to be considered as one farm even though they were not contiguous and each was locally called a farm. Farm operators were classified as (*a*) full owners who own all the land they operate; (*b*) part owners who own a part and rent from others the rest of the land they operate; (*c*) managers who operate farms for others and receive wages or salaries for their services (persons acting merely as caretakers or hired laborers were not classed as managers, and farms operated for institutions or corporations were considered to be managed even where no person was specifically indicated as being employed as the farm manager); in the 1969 census, managers were no longer classified separately because of the difficulty in identifying managed farms in the mail enumeration procedures used; farms which may have had a manager were classified by tenure based on the tenure of the individual, partnership, or firm which hired the manager and controlled the land; (*d*) tenants who operate hired or rented land only. Croppers are share tenants to whom landlords furnish all of the work animals or tractor power in lieu of work animals. Croppers were first classified separately in the 1920 census.

In the 1920, 1925, and 1930 censuses, croppers were defined as share tenants whose landlords furnished the work animals. The 1935 census schedule carried no inquiry on the method of paying rent and, therefore, croppers for that year included all tenants whose landlords furnished the work animals. The furnishing of tractor power was not taken into account in classifying croppers until the 1940 census.

The greatest difficulties in making a classification by tenure resulted

from the sharecropper system. Briefly, the question involved was whether the sharecropper should be considered merely a type of laborer or a farm operator. In reality, croppers had some of the characteristics of both laborers and tenants. Because of the decreasing importance of the cropper system in the South, croppers have not been classified separately since 1959.

K 154–161. Mortgaged farms—number, acreage, value, and amount of indebtedness, by tenure of operator, 1930–1966.

Source: U.S. Bureau of the Census and U.S. Department of Agriculture, Agricultural Research Service, *U.S. Census of Agriculture: 1954*, vol. III, pt. 5; *1959*, vol. V, pt. 4; and *1964*, vol. III, pt. 4.

Information on the number of mortgaged farms has been collected by both the Bureau of the Census and the Agricultural Research Service, or more recently, the Economic Research Service. Generally speaking, such data have been published with the data on amount of debt in census years, except in 1900 when no information on amount of debt was obtained. For a historical summary and an analysis of the data on number of mortgaged owner-operated farms for 1890–1935, see "Number and Percentage of Farms Under Mortgage," *Agricultural Finance Review*, vol. 1, No. 2, November 1938. The sources cited above also include State data on the number of mortgaged farms in each tenure class for 1940, 1945, 1950, 1956, and 1961.

Farm-mortgage debt includes the unpaid principal of mortgages, deeds of trust, sales contracts, vendors' liens, and all other debt for which farm real estate is pledged as security. Any farm which has a real estate mortgage is classified as a mortgaged farm even though only a portion of it is mortgaged.

Estimates for 1930–1961 are based on information obtained in the Census of Agriculture for owner-operated farms, mail surveys of samples of farm owners (including both operators and landlords), and reports from farm-mortgage lenders.

For each of the years shown, mortgage information was obtained from full-owner farm operators in the census of agriculture. Similar information was obtained by the Bureau of the Census for part owners for 1940, 1945, 1950, 1956, and 1961. This information was supplemented by data obtained in mail surveys for land operated by part owners, tenants, and managers. The 1930 mail survey was conducted by the Bureau of Agricultural Economics. Later surveys were cooperative undertakings of the Bureau of the Census and the Bureau of Agricultural Economics or the Agricultural Research Service.

Data for 1966 were collected in a supplementary survey for the 1964 Census of Agriculture of approximately 16,000 farms. The survey was taken in 1966 and the farms included in the survey were selected from the 1964 Census of Agriculture and from the records of the coverage evaluation survey for the 1964 Census. Comparable data for the tenure breakdown for 1966 are not available because of procedures used in the processing of the data.

For information by States and geographic divisions and descriptions of procedures, see the sources cited, and *U.S. Census of Agriculture: 1950*, vol. V, pt. 8, and *1959*, vol. V, pt. 4.

K 174–176. Farm employment, 1910–1970.

Source: U.S. Department of Agriculture, Statistical Reporting Service (SRS), 1910–1928, *Farm Employment*, Statistical Bulletin No. 334, July 1963; 1929–1969, *Agricultural Statistics, 1967* and *1971* issues; 1970, *Farm Labor*, January 1972.

For detailed descriptions of farm employment concepts, see *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 7, pp. 7–12. See source publications for regional, State, and monthly data.

These data are based on (1) data from the census of population used as benchmarks for 1910, 1920, and 1930, and data from the census of agriculture used for 1940, 1950, 1954, and 1959; (2) nationwide annual sample surveys made by SRS since 1965; (3) estimates of farm employment from nationwide enumerative sample surveys made at intervals during 1945–1948, together with historical data on the seasonal distributions of man-hour labor requirements in farm production, used to develop measures of seasonal variation; (4) returns from the crop reporters of the monthly mailed questionnaire on employment on farms, available since 1925; and (5) annual estimates of the number of farms by States and regions used to expand "adjusted" average employment per farm to obtain regional and national estimates of total farm employment and of the family and hired worker components of the total.

Family workers include working farm operators, plus members of their families who did unpaid farmwork or chores for 15 hours or more during the survey week. All persons working one hour or more during the survey week for pay at farmwork or chores are classified as hired farmworkers. Members of the operator's family receiving wages for work on their farms are counted as hired workers. Sharecroppers are considered family workers when working on their own crops but are classified as hired workers when doing farmwork for pay off their tracts. A person employed as both a family worker and a hired worker during the survey week on the same farm is counted as a hired worker. The survey week is the last complete calendar week in the month, but when that week includes the last day of the month the survey week is the next to the last full calendar week.

The average number of hired and family workers per farm is computed for the reporting farms for conterminous United States. The averages are then adjusted by factors based on comparisons with the last census level, labor requirements data, and the estimated seasonal pattern of employment based on the latest census and special studies in selected States. The adjusted averages are then multiplied by the estimated number of farms in each State to estimate the number of family and hired workers employed. Data from the census, State assessors' reports, Agricultural Stabilization and Conservation records, and indications of change from the larger acreage and livestock surveys are used in estimating the number of farms. Annual averages of employment are simple averages of last-of-month employment estimates.

Farm employment data were first collected through crop reporters in October 1923. In 1938, the National Research Project of the Works Progress Administration developed monthly farm employment estimates for 1925–1936 from the crop reporter data. See E. C. Shaw and J. A. Hopkins, *Trends in Employment in Agriculture, 1909–1936*, Works Progress Administration, Philadelphia, November 1938. Monthly estimates have been made by the Agricultural Marketing Service and the former Bureau of Agricultural Economics from crop reporter data for 1936–1970, using the methods developed in the Works Progress Administration project, plus certain recent refinements. Following the 1950 Census of Agriculture, the entire historical series was reexamined and revised. Data for 1950–1970 reflect revisions following the 1959 and 1964 censuses of agriculture and enumerative area surveys made by SRS.

K 177–181. Farm wage rates, 1866–1970.

Source: U.S. Department of Agriculture, 1866–1909, Bureau of Agricultural Economics, *Farm Wage Rates, Farm Employment, and Related Data*, January 1943 (processed); 1910–1947, Agricultural Marketing Service, *Farm Labor*, January 1958; 1948–1969, Statistical Reporting Service (SRS), *Agricultural Statistics, 1967* and *1971* issues; 1970, *Farm Labor*, January 1972.

Information on farm wages prior to 1866 is scattered; it consists of individual records or covers only certain States rather than the entire country. See Department of Agriculture, Bureau of Statistics, *Wages of Farm Labor in the United States*, Miscellaneous Series, Report No. 4, 1892; same agency's *Wages of Farm Labor*, by George K. Holmes, Bulletin 99, 1912; and T. M. Adams, *Prices Paid by Vermont Farmers for Goods and Services and Received by Them for Farm Products, 1790–1940;* see also Vermont Agricultural Experiment Station Bulletin 507, *Wages of Vermont Farm Labor, 1780–1940*, Burlington, February 1944.

The first investigation made by the Department of Agriculture of wage rates for hired farm workers was in 1866. In the next 44 years, 18 similar studies were made at irregular intervals. Then, for 1909–1923, inquiries were made annually and, since 1923, quarterly. In these surveys, questionnaires were sent to the voluntary crop reporters.

For 1866–1909, crop reporters were requested to estimate the average wages in the locality for the year. Sometimes the inquiry was made in the spring and sometimes in the fall or winter. When it was made in the spring, the year to which the annual average refers is uncertain. For this reason, a dual date is designated for certain of these years as, for example, "1874 or 1875." In each of these 19 investigations, wage rates per day were obtained separately for harvest work and other work. The data published here for 1866–1909 are the day rates for "other than harvest work."

The monthly wage rates, series K 178–179, shown for 1866–1909 are not strictly comparable throughout this period. For 1866–1890, monthly wage rates shown are for workers hired by the year. In addition, in the first three of the aforementioned inquiries, crop reporters were asked for monthly rates paid to workers hired for the season, which are published by Holmes (see above). For 1891–1909, the monthly rate requested was on a combined annual and seasonal basis. In 1909, the distinction was again made, but the two types of monthly rates were averaged. The weighted average (revised) is published here. For the original averages of the monthly rates for workers hired by the year and for those hired by the season, see Holmes, *Wages of Farm Labor*, referred to above. For 1866–1909, wage rates requested were those paid to men doing outdoor work. In 1902, 1906, and 1909, rates paid women for domestic work on farms were also requested.

Data from the 19 wage inquiries were published in 4 bulletins by the Bureau of Statistics of the Department of Agriculture—Nos. 4 (1892), 22 (1901), and 26 (1903) of the "Miscellaneous" series, and Bulletin 99 (1912) of the Bureau of Statistics series. In the first 3 bulletins, the rates were published without reducing currency to gold values, since the monetary system was not on a gold basis; but in Bulletin 99 and in subsequent reports the wage rates for the period of inflated currency values following the Civil War were reduced to gold values. In Bulletin 99 the weighting system, which was not uniform for all previous surveys, was revised and wage-rate data for all 19 surveys were recomputed. The number of male agricultural laborers in each State, as reported by the census of occupations, was used as the weight to obtain United States and major region averages from State average wage rates.

For 1909–1923, annual inquiries on farm wage rates in their localities were made of crop reporters. They were asked about monthly rates with and without board; and about daily rates with and without board "at harvest" and for "other than harvest labor." In 1923, to give an overlap for linking purposes, a quarterly inquiry was initiated. The new quarterly series eliminated the distinction between day rates for harvest work and for nonharvest work; it changed the time reference of day rates to "average wage rates being paid to hired labor at the present time in your locality," with an additional instruction to include in the estimates of day rates "average daily earnings of piece workers." The new rates obtained after 1923 are probably more nearly comparable with the old daily wage rates for "other than harvest work" than they are with either the old daily rates for harvest work or with a combination of the two types of daily rates.

For 1923–1948, the questions asked crop reporters on wage rates continued in almost exactly the same form. In 1948, the wage rate series was changed to include more different kinds of rates and to specify more clearly the perquisites received in addition to cash wages. Value of perquisites is not included in wage rates obtained—they are cash rates only. The types of rates currently obtained are as follows: Per month with board and room, per month with house (no meals), per week with board and room, per week without board or room, per day with board and room, per day with house (no meals), per day without board or room, per hour with house (no meals), and per hour without board or room.

Rates for 1949–1970 are not exactly comparable with rates for previous years. They only approximate the rates denoted in the series headings and represent averages for each type of rate obtained.

Average rates based on data reported by crop reporters are published quarterly and annually in Statistical Reporting Service, *Farm Labor*, but annually only in the Department of Agriculture, *Agricultural Statistics*. The annual average rates are averages of the quarterly averages weighted by the number of hired farm workers employed each quarter.

Since employment data are for approximately the last week of the month and wage rates are usually reported a few days before the end of the month, they must be weighted to center on July 1 (the midpoint in the calendar year) in computing an annual average. The annual average is a 5-quarter average based on data for January of the current year and January of the following year. The use of only the January current year data would not properly weight the changes after October 1, especially when rates are rising or falling significantly.

K 182. Farmers' expenditures for hired labor, 1910–1970.

Source: U.S. Department of Agriculture. 1910–1924, Agricultural Marketing Service, *The Farm Income Situation*, July 1958 (No. 174); 1925–1928, Economic Research Service, same publication, July 1968 (No. 211); 1929–1970, Statistical Reporting Service, *Agricultural Statistics, 1967* and *1971* issues.

Data for census years are from the Bureau of the Census; intercensal year figures are Economic Research Service estimates. For a detailed description of concepts and methods, see *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 3.

Estimates of farmers' total expenditures for hired labor are available for 1929 and since 1949 for individual States. The total farm labor bill is divided between cash, which accounts for about nine-tenths of the total, and the value of board and lodging and other wages in kind. Such perquisites of hired workers are valued at the estimated cost to operators, not at prices that workers would have to pay if the same items were purchased elsewhere. It is also necessary to distinguish wages paid to hired workers who live on farms from those paid to nonresident hired workers.

K 183. Index, man-hours of labor used for farmwork, 1910–1970.

Source: U.S. Department of Agriculture, Economic Research Service (ERS). 1910–1949, compiled by ERS; 1950–1970, *Changes in Farm Production and Efficiency*, Statistical Bulletin No. 233, 1971 issue.

Man-hours of labor used in farming are estimated by applying regional average man-hours per acre of crops and per head or unit of production of livestock to the official estimates of acreages and numbers made by the Statistical Reporting Service.

Time for farm maintenance or general overhead work is calculated separately and added to the direct hours for crops and livestock to obtain the total number of man-hours. Annual man-hours per acre or per head are estimated by interpolating between or extrapolating from benchmarks.

Benchmarks are estimates of labor used per acre and per head in each State converted to a geographic-division basis.

The interpolation of numbers of man-hours per acre or per animal between benchmarks and extrapolation beyond benchmarks are modified by several factors. For crops, these include such items as yields per acre, utilization of the crop, methods of harvest, and source of power as indicated by numbers of tractors and work stock on farms. For livestock, the modifiers include such factors as size of enterprise, production per animal, and extent of different methods and practices followed.

For more detailed explanation, for the aggregate man-hours upon which the indexes are based, and for other more detailed data, see *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 2.

K 184–191. Farm machinery and equipment, 1910–1970.

Source: U.S. Department of Agriculture, Economic Research Service, *Changes in Farm Production and Efficiency*, Statistical Bulletin No. 233, July 1964 and June 1971 issues.

Census counts of tractors, automobiles, and motortrucks were first made in the 1920 Census of Agriculture; of grain combines and farms with milking machines in the 1945 census; of cornpickers and pickup balers in the 1950 census; and of field forage harvesters in the 1954 census. Estimates for intercensal years and before census data were available are as of January 1.

Before 1950, figures of machines shipped by manufacturers for farm use, with an allowance for disappearance, were used mainly as the basis for these estimates. Figures for automobiles and motortrucks were based on annual registrations for a limited number of agricultural States, and a few special sample surveys that were nationwide. Since 1950, the annual series is based on census counts, production. imports and shipments of machines, survey data (mainly a questionnaire to Statistical Reporting Service crop reporters in February), trends in census data, and estimated annual discard rates.

K 192. Farmers' expenditures for fertilizer and lime, 1909–1970.

Source: U.S. Department of Agriculture. 1909–1929, Agricultural Marketing Service, *The Farm Income Situation*, July 1958 (No. 174); 1930–1970, Economic Research Service, *Farm Income Situation*, July 1971 (No. 218).

For a detailed discussion of concepts, coverage, and methods, see *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 3.

K 193. Commercial fertilizer consumed in U.S., 1850–1970.

Source: U.S. Department of Agriculture, 1850–1944, Agricultural Research Service, *Statistics on Fertilizers and Liming Materials in the United States*, Statistical Bulletin No. 191, April 1957; 1945–1969, Statistical Reporting Service, *Consumption of Commercial Fertilizer and Primary Plant Nutrients in the United States*, Statistical Bulletins No. 375 and No. 472, June 1966 and June 1971; 1970, Statistical Reporting Service, *Commercial Fertilizers—Consumption in the United States*, Sp. Cr. 7 October 1971.

Commercial fertilizer includes any substance containing nitrogen (N), phosphoric acid (P_2O_5), potash (K_2O), or any other recognized plant-food element or compound, such as lime (CaO), magnesia (MgO), boron (B), etc., which is consumed primarily for the purpose of supplying plant food to crops, excluding barnyard manures but including dried animal manures sold commercially. Ground phosphate rock, gypsum, sulfur, borax, copper sulfate, manganese sulfate, zinc sulfate, cottonseed meal, dried blood, animal tankage, etc., are included when sold to farmers for plant food, but are excluded when sold as fungicides, animal feeds, or for any other purpose than for plant food. Limestone, dolomite, magnesia, etc., are included when used as components of mixed fertilizers but excluded when sold as soil amendments (materials used to change the physical properties or the acidity of the soil rather than to supply plant food).

The data refer to all commercial plant food, including that distributed by the Agricultural Stabilization and Conservation Service in its soil-building program and that used by the Tennessee Valley Authority in test demonstrations.

For 1920 to 1944, the data relate to consumption only in conterminous United States; for 1850–1919 and 1945–1970, they include consumption in Alaska, Hawaii, and Puerto Rico. The total consumption in these outlying areas increased from about 3,000 tons in 1890 to 52,000 in 1900, 93,000 in 1910, 120,000 in 1920, 254,000 in 1930, 321,000 in 1940, 366,000 in 1950, 376,000 in 1960, and 351,000 in 1970. Most of this consumption occurred in Puerto Rico and Hawaii.

The earliest data on fertilizers were collected by State fertilizer control officials. The first volume of *American Fertilizer*, 1894, presents figures for Georgia for 1875–1892. In 1945, 36 States had a Fertilizer Control Office or similar agency which published tonnages of fertilizers consumed in the State. Now, all States have a Fertilizer Control Office or similar agency. A bibliography of such reports is given in U.S. Department of Agriculture, Circular No. 756, 1946, which also gives considerable detail on fertilizer consumption.

Since 1965, annual estimates of consumption have been made by the Statistical Reporting Service, using reports from State fertilizer control officials and voluntary reports from fertilizer manufacturers.

Annual estimates of consumption made by the National Fertilizer Association (now a part of the Fertilizer Institute) were discontinued in 1955. *The Fertilizer Review*, vol. XXI, No. 2, pp. 11–14, presents figures for conterminous United States by decades from 1880 to 1910, and annually to 1945.

K 194. Lime consumed on farms, 1910–1970.

Source: U.S. Department of Agriculture, Economic Research Service, *Changes in Farm Production and Efficiency*, Statistical Bulletin No. 233, July 1964; June 1966; and June 1973.

This series links two series not quite alike in coverage. For 1929–1945, the tonnage is in terms of ground limestone, materials in other forms being converted to that basis, except for some coarser materials used in Illinois. These figures were based on surveys made by State agricultural college agronomists and include county surveys of producers, and data from county extension agents and AAA offices, assembled by C. E. Carter of the Production and Marketing Administration. The data for 1910, 1920, and 1925–1928, however, were assembled by A. L. Mehring of the Bureau of Plant Industry, Soils, and Agricultural Engineering. The intervening years were interpolated. Mehring's figures, with the interpolations, were carried through 1939 in the Bureau of Agricultural Economics series, *Income Parity for Agriculture*, pt. II, sec. 2; hence, the figures given there for 1929–1939 differ from those presented here. Lime used by fertilizer manufacturers in their mixed goods is not included. Data for recent years are from National Agricultural Limestone Institute, Inc.

K 195–203. Farmers' marketing and purchasing cooperatives—number, memberships, and business, 1913–1970.

Source: U.S. Farmer Cooperative Service, 1913–1950, *Statistics of Farmer Cooperatives, 1954–1955*; 1951–1970, *Statistics of Farmer Cooperatives, 1969–70*.

These data were first compiled in 1913–1915 from questionnaires collected by mail from all cooperatives known to exist in the period 1912–1915. In 1919, data on the extent of cooperative marketing and farm supply purchasing were collected as a part of the census of agriculture. Other nationwide surveys were conducted in 1922 and for the fiscal years 1925–1926 and 1927–1928. Beginning with 1929–1930, annual nationwide surveys have been taken of farmer marketing, farm supply, and related services cooperatives. Data were collected by mail in each of these surveys except for 1936–1937 when information was collected in the field by Farm Credit Administration in cooperation with the banks for cooperatives and 33 State agricultural colleges.

A farmer cooperative is defined as one which meets the following requirements: (1) Farmers or associations of agricultural producers

hold the controlling interest; (2) each member is limited to one vote regardless of the amount of stock or membership capital he owns therein, unless dividends on stock or membership capital are limited to 8 percent a year or less, in which case the number of votes per member can vary; and (3) the value of products handled for nonmembers is not greater in value than the amount handled for members. All active farmer cooperatives that meet the above criteria, and that provide information indicating they market farm products, handle farm supplies, or perform related services, are included in the annual survey.

As cooperatives tended increasingly to diversify their operations, the annual survey figures became less satisfactory. Therefore, beginning with the survey covering fiscal 1951, revised questionnaires were used to develop information on a functional and commodity basis. The questionnaires were further revised in 1960 to limit the scope of questions on service organizations.

More Recent Data for *Historical Statistics* Series

Statistics for more recent years in continuation of many of the still-active series shown here appear in annual issues of the ***Statistical Abstract of the United States***, beginning with the 1975 edition. For direct linkage of the historical series to the tables in the ***Abstract***, see Appendix I in the ***Abstract***.

Series K 1–16. Farm Population, Farms, Land in Farms, and Value of Farm Property and Real Estate: 1850 to 1970

[Census figures in *italics*]

Year	Farm population			Number of farms (1,000)	Land in farms [1]					Value of all farm property (mil. dol.)				Average value per farm of land and buildings (dol.)	Average value per acre of land and buildings (dol.)	Index of average value of farm real estate per acre (1967 = 100)
	Total (1,000)	Percent of total population	Net change through migration (1,000)		Total (1,000 acres)	Percent of total land area	Average acreage per farm (acres)	Cropland (1,000 acres)	Pasture-land (1,000 acres)	Total	Land and buildings [2]	Implements and machinery	Livestock [3]

* Except as indicated by footnote 4, denotes first year for which figures include Alaska and Hawaii.

[1] Intercensal estimates derived from straight-line interpolation. Excludes District of Columbia.

[2] Census years as of date of enumeration. All other years as of March 1. Excludes District of Columbia.

[3] Estimates as of January 1, except hog and pig inventory, beginning 1969, estimated as of December 1.

[4] Includes Alaska and Hawaii.

[5] Cropland harvested only.

[1] Data for subclass of tenants for 1964, all data for 1959 and 1954, and average value per farm of farmland and buildings for 1950, are based on sample reports.
[2] Excludes Alaska and Hawaii.
[3] 49 States; no classification by tenure for Alaska.
[4] Full owners for 1930 include 330 "Owners" and, for 1920, 345 "Owners" for Alaska, for whom no differentiation was made between full and part owners.
[5] Totals by race include 1,257 white and 4,985 Negro and other race operators for 1959 for Hawaii, 492 white and 8 Negro and other race operators for 1930 for Alaska, and 361 white and 3 Negro and other race operators for 1920 for Alaska, for whom tenure distribution is not available.
[6] Full owners by race for 1930 include 359 part owners for Hawaii; tenure distribution by race for Hawaii for that year was for "Owners" with no differentiation between full and part owners.
[7] 49 States; data not distributed by race or tenure for Hawaii.
[8] Data for full owners for 1930 include 63,626 acres and, for 1920, 77,288 acres for "Owners" for Alaska, for which there was no differentiation between full and part owners.
[9] Excludes Hawaii.

Series K 154–161. Mortgaged Farms—Number, Acreage, Value, and Amount of Indebtedness, by Tenure of Operator: 1930 to 1966

[1] Acres, value, and debt are for owned portion only.
[2] Acres, value, and debt include the rented portion of part-owner farms.
[3] Except for number of farms, includes figures for the rented portion of part-owner farms.
[4] Not shown because data for mortgage debt include rented portion of part-owner farms.

Series K 162–173. Farms and Land in Farms, by Size of Farm: 1880 to 1969

* Denotes first year for which figures include Alaska and Hawaii.

[1] These annual averages are simple averages of last-of-month employment estimates.

[2] Includes farm operators and members of their families doing farm work without wages.

[3] Annual averages are weighted averages of wage rates as reported quarterly by crop reporters. Different wage rate categories used after 1948. See text.

[4] Cash wages and value of perquisites.

[5] 1877 or 1878, 1878 or 1879 (combined).

[6] For years 1866 to 1878, paid in gold.

Chapter K

Agricultural Income and Finances (Series K 204-383)

K 204–219. Balance sheet of the farming sector, 1940–1970.

Source: U.S. Department of Agriculture, *The Balance Sheet of the Farming Sector* (formerly *The Balance Sheet of Agriculture*), annual issues.

The balance sheet of the farming sector is a statement of the dollar value, at a point in time, of major assets and debts of farm operators and landlords directly related to farming and farm family living. The balancing item is the equity of proprietors in those assets.

The balance sheet which originated in 1944 in the Bureau of Agricultural Economics as the "balance sheet of agriculture" provides aggregate estimates for the United States excluding Alaska and Hawaii. It is not a consolidation of the balance sheets of individual farm operators and landlords.

Balance sheets were constructed as of January 1, for each of the five years 1940–1944. The immediate aim was to provide benchmarks from which to measure changes in the farm economy in the years following World War II. The balance sheet along with an analysis of trends has been published annually since 1945. In 1969, the name was changed to "balance sheet of the farming sector" because "agriculture" had come to denote more than farm interests of operators and nonfarm landlords.

Certain assets and debts of farmers and farm landlords are not included in the accounting, due to lack of adequate data. For example, farmers' financial assets such as cash value of life insurance, savings in savings and loan associations, ownership of corporate stocks, and the value of farmer owned crops stored off farms and not under CCC loans are not included. Another limitation is the estimate of farm debt held by individuals, merchants, dealers, and other miscellaneous lenders. They are based on census surveys taken every 5 or 10 years and are less accurate than the amount of debt held by lenders who report at least annually to the Department of Agriculture (USDA).

The methodology used in constructing the balance sheet series is presented in detail in *Major Statistical Series of the U.S. Department of Agriculture, How They Are Constructed and Used*, Agriculture Handbook No. 365, vol. 6.

K 205, farm real estate. These are estimates as of March 1. They include buildings and improvements and are published annually by the Economic Research Service in "Farm Real Estate Market Developments." The index of average value per acre is used to calculate the annual dollar value per acre. The average dollar value per acre multiplied by the number of acres in farms results in the total dollar value of farmland. Estimates are made by States. Census surveys each five years serve as benchmarks. Changes in the index of value per acre based on USDA annual surveys are used to interpolate between census years.

K 206, livestock and poultry. These estimates are derived by multiplying the value per head of the various species by the number on hand at the beginning of the year. The Statistical Reporting Service supplies the basic data, which are obtained through their surveys. Commercial broilers, assumed not to be owned by farm operators or landlords, are not included.

K 207, machinery and motor vehicles. The data include the value of automobiles, trucks, tractors, combines, hay balers, forage harvesters, corn pickers, and miscellaneous other items. The value of the individual classes is obtained by adding value of purchases during the year and subtracting depreciation. The annual survey of manufactures and sample surveys of agriculture, both conducted by the Bureau of the Census, supply basic data.

K 208, crops stored on and off farms. These estimates are derived by multiplying the quantity of the various farmer-owned crops stored on farms, by States, January 1, by the average price, by States, as of the previous December 15. Crops under CCC loan are included. Quantity and price data are from the Statistical Reporting Service. Farmer-owned crops stored off farms are limited to crops under CCC loan. The value is estimated as the higher of (1) the value of the CCC loan or (2) the market value of the crop. Data are not available for value of farmer-owned crops stored off farms and not under CCC loan.

K 209, household equipment and furnishings. The Agricultural Research Service provides these estimates. Basically, the inventory value for the previous January 1 is increased by expenditures for such items and decreased by the amount of depreciation during the year. Changes in the number of farm households are considered in the calculations.

K 210, deposits and currency. Until 1961, the Board of Governors of the Federal Reserve System estimated the demand deposits of farmers in commercial banks. Farmers' time deposits in banks were estimated as a certain percentage of demand deposits based on data of insured banks in a selected sample of about 600 predominantly agricultural counties. Since 1961, the Economic Research Service has made the estimates based on (1) changes in bank demand and time deposits in the 600 selected agricultural counties and (2) changes in the index of demand and time deposits in "country banks" (members of the Federal Reserve System with head offices located in towns of under 15,000 population). The estimate of currency owned by farmers is based on a percentage of demand deposits as determined by a survey of the total U.S. population in 1960, by the Securities and Exchange Commission.

Estimates of demand and time deposits and currency of farmers may not be very accurate. Basic data used are from samples of banks which could be outdated. The measure of currency is based on assumptions and fragmentary data.

K 211, U.S. savings bonds. Farmers' holdings of U.S. savings bonds are estimated by adding purchases and interest accrued during the year to holdings at the beginning of the year and subtracting redemptions. There are no separate records of bond sales and redemptions for farmers as a group. Estimates are partially based on total sales data of series E and H bonds in about 600 selected agricultural counties which essentially are the same counties used in estimating farmers' bank deposits. Farmers' rate of redemption is assumed to be half the rate of the total population. Changes in the number of farmers are also considered. These estimates are admittedly weak.

K 212, investment in cooperatives. The net worth of farmer cooperatives is compiled from data furnished by the service or supervisory agencies for some of the various types of cooperatives, such as marketing and purchasing cooperatives, Federal land banks, production credit associations, and rural electric cooperatives. For other cooperatives, estimates are made by the Economic Research Service. A major limitation of the estimate of farmers' investment in cooperatives is that the cooperatives are not used exclusively by farmers, and all of the net worth cannot be claimed by farmers. No reliable data are available of the farmer portion of the net worth of cooperatives.

K 214, liabilities. Farm loans or farm related debts owed by farmers and farm landlords are classified for balance sheet purposes into (1) farm real estate loans and (2) farm nonreal estate loans. Data are for loans outstanding January 1.

K 215, real estate debt. These are loans owed by farmers and farm landlords and secured by mortgages or other liens on farm real estate regardless of the purpose of the loan. Terms are relatively long, usually ranging from 10 to 30 years or longer.

Farm loans held by Federal land banks, life insurance companies, commercial banks, and Farmers Home Administration are reported directly to USDA. Loans held by miscellaneous nonreporting lenders are estimated from information obtained from Bureau of the Census sample surveys every 5 or 10 years. For intercensal years it is assumed that loans held by miscellaneous lenders changed at the same rate as loans held by reporting lenders. A limitation in estimating debt held by miscellaneous lenders is the time lag between Census Bureau reports during which the rate of change may vary.

K 216–218, nonreal estate debt. These are loans owed by farmers not secured by real estate. Most such debt is for operating expenses, purchases of livestock, machinery, and repairs. Some loans are secured by crop or other chattel liens but many are unsecured. Terms are usually 12 months or less but some which involve machinery and livestock purchases or farmstead improvements may have maturities of 5 to 7 years.

Loans held by commercial banks, production credit associations, Federal intermediate credit banks, Farmers Home Administration, and Commodity Credit Corporations are reported directly to USDA. Loans held by miscellaneous lenders are estimated. Based on Census Bureau sample surveys, the percent that loans held by the miscellaneous lenders is of loans held by reporting lenders is applied annually to debt held by reporting lenders to give an estimate of debt held by miscellaneous lenders. Recent estimates are that debt held by miscellaneous lenders is equivalent to 70 percent of the non-real-estate debt held by the reporting lenders.

An important limitation of these data is the questionable accuracy of the miscellaneous debt. Except for census data and results of a few less extensive special surveys, little is known of total farm loans held by miscellaneous lenders such as individuals, merchants, dealers, and small loan companies.

K 219, proprietors' equities. These figures are the residual after subtracting total debt from total value of assets—estimated net worth or the value of unencumbered farm assets.

K 220–239. Value of gross farm product in current and constant (1958) dollars, 1929–1970.

Source: U.S. Office of Business Economics, 1929–1963, *The National Income and Product Accounts of the United States, 1929–1965*, tables 1.17 and 1.18; 1964–1967, *U.S. National Income and Product Accounts, 1964–1967*, tables 1.17 and 1.18. U.S. Bureau of Economic Analysis (formerly Office of Business Economics), 1968–1970, *Survey of Current Business*, July issues, tables 1.17 and 1.18.

The Department of Agriculture series on gross and net farm income is the basis of the agricultural components of the national income and product accounts maintained by the Bureau of Economic Analysis.

The estimates of farm income and expenditures in general refer to income from commodities and services produced on farms as defined in the Census of Agriculture, to the expenses associated with such production, and to nonfarm income received by persons living on these farms. The net income of farm operators from farming is not directly comparable with incomes in nonfarm industries, since farm operators in the main are not only involved in management (including investment decisions) but are actively working on their farms.

For bases of these data, see text for series K 256–285, K 286–302 and K 326–329.

K 240–250. Value of farm gross output and product, in current and constant (1910–14) dollars, 1800–1900.

Source: M. W. Towne and W. E. Rasmussen, "Farm Gross Product and Gross Investment During the 19th Century," *Studies in Income and Wealth*, vol. 24, National Bureau of Economic Research, 1960 (copyright).

These estimates are designed to measure the output of agriculture from 1800 to 1900 on a gross product, or "value-added" basis. The series for 1870-1900 are more reliable than for earlier years, and those for 1840-1860 are more reliable than for 1800-1830.

K 241–243, sales and home consumption of farm products, are totals of commodity values estimated separately from price and quantity estimates for individual commodities and groups of commodities. The data for 1870–1900 are based primarily on Department of Agriculture, *Gross Farm Income and Indices of Farm Production in the United States, 1869–1937*, Technical Bulletin No. 703, December 1940. Production estimates for 1840–1860 are based mostly on the Census of Agriculture. For 1800–1830, output is generally derived as the product of population and per capita production rates suggested by data for 1840–1860, although independent estimates were employed for the major cash crops, which amounted to about one-eighth of the total. Prices for current dollar valuation were obtained by extrapolating the 1870 farm price estimates of Technical Bulletin No. 703 to earlier years by changes in related wholesale prices and average prices received by farmers.

K 244, livestock inventory changes, is based on Department of Agriculture inventory and value-per-head data for 1870–1900. Inventory data from the Census of Agriculture were used for 1840–1860. For 1800–1830, the inventory estimates were projected backward from 1840 by population changes. Average values per head were projected to earlier years from 1870 by related wholesale price series.

K 245, gross rent from farm dwellings, represents imputed income from home ownership. Figures were obtained by multiplying the 1910–1914 average gross rent per farm (from the current farm income series) by the estimated number of farms in the decade years 1800–1900, and by inflating to current dollars by an index of construction costs. Estimates for number of farms were obtained from the censuses of agriculture for 1850–1900, and were extrapolated from 1850 to 1820 by the estimated number of persons engaged in agriculture, and from 1820 to 1800 by population figures.

K 247, intermediate products consumed, represents the cost of goods and services purchased for production purposes by farms from the nonfarm sector. It is deducted from gross output to derive the net contribution of the agricultural sector, or farm gross product, series K 246. The intermediate products and services originating off farms include fertilizer, cotton ginning, horseshoeing, repairs, and rent paid to nonfarm landlords. For most items, estimates for 1800–1900 were constructed by extrapolating the 1910–14 average costs in the current series backward by changes in series closely related with respect to quantity or price. The estimates of intermediate products have as a whole less foundation in census or other contemporary benchmark sources and are less reliable than the gross output estimates.

K 249 and **K 250,** farm-produced improvements and home manufactures, although not included in current official measurements of gross farm output, are presented here because of their greater relative importance in the earlier years. The land improvement estimates were derived as the product of average annual number of acres improved and estimated per acre labor cost of improvement. The value of home manufactures series is based on survey and census estimates for 1810 and 1840–1870, with other decades estimated on the basis of trends in real output indicated by these benchmarks; a textiles price index was used for deflation.

Estimates of data in 1910–14 dollars were derived in nearly all cases by multiplying estimated quantities of individual products by average prices for 1910–14.

K 251–255. Exports and imports of farm products, 1901–1970.

Source: U.S. Department of Agriculture, *Agricultural Statistics, 1937*, table 463; *1952*, table 817; *1957*, table 808; and *1972*, table 817.

U.S. foreign agricultural trade statistics include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes

of manufacture such as rawhides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the outlying areas, between Puerto Rico and the outlying areas, among the outlying areas, and in transit through the United States from one foreign country to another when documented as such through U.S. Customs.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. Except for Canada, export shipments valued $251–$499 ($100–$499 prior to October 1969) are included on the basis of sampling estimates; shipments to Canada valued $251–$1,999 ($100–$1,999 prior to October 1969) are sampled.

The export statistics also exclude shipments to the U.S. Armed Forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than $251 ($100 prior to October 1969) are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by the U.S. Department of Agriculture from data obtained from operating agencies.

Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. Low-valued shipments under $251 are reflected in nonagricultural and overall import totals.

K 256–285. Farm income and expenses, 1910–1970.

Source: U.S. Department of Agriculture, Economic Research Service, *The Farm Income Situation*, annual issues, and unpublished data.

These estimates refer to calendar-year income arising from commodities and services produced on farms, as defined in the Census of Agriculture, to the expenses associated with such production, and to other income received by persons living on farms.

Estimates of farm income were started in 1924 on a crop-year basis. In 1936, a legislative formula for income parity for agriculture, based on a 1910–1914 comparison of farm and nonfarm per capita incomes, resulted in an extensive project of research designed to extend the estimates back to 1910, to put them on a full calendar-year basis comparable with estimates of nonagricultural income, and to improve and expand the data in other respects.

No adequate statistics are available on farm income and expenses before 1910. Willford I. King's early estimates of the total value produced in agriculture go back to 1850, but for census years only (published in *The Wealth and Income of the People of the United States*, Macmillan Co., 1915). They were based on inadequate information and are not comparable with any of the current series. Without data for intercensal years, King's decennial figures may be misleading even as an indication of the long-term trend. The decennial projections back to 1800 prepared by the National Industrial Conference Board, *National Income in the United States, 1799–1938*, 1939, are in much the same category, and must be regarded only as very rough approximations. Annual estimates of gross farm income extending back to 1869, and covering a substantial part of total farm production, are given in Department of Agriculture, *Gross Farm Income and Indices of Farm Production and Prices in the United States, 1869–1937*, Technical Bulletin No. 703, December 1940. Although not comparable with any of the current series, these estimates are probably fairly reliable as an indication of trends in the gross value of farm production.

In the absence of any direct reporting of farm income on an adequate scale, estimates have been developed by indirect methods using available data on production, disposition, prices, and costs. The procedure followed has been to treat agriculture as one tremendous enterprise, and to derive its net income by first computing "gross income," series K 264–270, and then deducting aggregate expenses of production.

K 256–258, personal income of the farm population. Personal income of the farm population is the sum from farm and nonfarm sources. Personal income from farm sources, series K 257, is the total net income of farm operators, including government payments, *less* the net income of nonresident farm operators, *plus* wages and salaries and other labor income of farm resident workers, *less* contributions of farm resident operators and workers to social insurance. Personal income of the farm population from nonfarm sources, series K 258, consists of income received from nonfarm wages and salaries, business and professional income, interest, and transfer payments, such as unemployment compensation, social security, and veterans benefits. Also included is rental income from nonfarm sources and an estimate of income from items such as dividends and royalties. The figures for series K 256–258 are generally comparable throughout the period shown and are believed to be fairly complete and reliable despite the indirect methods of estimation. For a more detailed discussion and for other series, see *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 3.

K 259, farm operators' total net income. It is their realized income plus or minus the value of the net change in inventories. It is the figure included in the national income estimates of the U.S. Department of Commerce as farm proprietors' income. Series **K 260**, average per farm, is derived by dividing total net income by the number of farms as of January 1 each year.

K 264–270, realized gross income from farming. Figures for series K 264–270 are estimates of realized gross farm income and its principal components. These estimates are "gross" in the sense that they represent the total value of commodities and services produced by farms without any deduction for costs incurred in their production, and without any consideration of who reaps the ultimate benefit from their sale or use, whether it be a farm operator, a landlord, a farm laborer, or a bank. Cash receipts from farm marketings, in the case of crops, include all sales of crops by farmers, series K 266; purchases by other farmers for use as feed or seed are later deducted as production expenses. Similarly, in the case of livestock and products, series K 267, the estimates include all sales by farmers, with purchases of livestock by other farmers included as a production expense in series K 271–283.

For 1933–1970, realized gross farm income includes Government payments to farmers, series K 268. Indirect financial aid to farmers through commodity prices or loan values is covered in cash receipts from marketings. Government payments to landlords, as well as farm operators, are included but the former are also covered under farm production expense, series K 283, as rental payments to nonfarm landlords.

Realized gross farm income, series K 264, represents total cash farm income, series K 265; Government payments, series K 268; the value of farm-produced food and fuel consumed in farm households, series K 269; and an imputed rental value for all farm dwellings, series K 270. Farm-household consumption of farm products is valued at prices received for the sale of similar products. It includes food and fuel furnished to hired farm laborers, later deducted as a part of total labor costs to farm operators. The rental value of dwellings is on a gross basis; later deductions of rent, interest, taxes, insurance, maintenance, and depreciation are for farms as a whole with their buildings and equipment, and include shares allocable to farm dwellings.

The figures for cash receipts from marketings have been derived, commodity by commodity, from the periodic Crop Reporting Board estimates of production, disposition, price, and value. These estimates in turn are generally based on periodic census enumerations supplemented by regular reports from field statisticians, long lists of farmers,

and special crop, livestock, and price correspondents, and by records and reports of public and private agencies concerned with the inspection, storage, marketing, transportation, or processing of farm products. Separate commodities or groups are shown in series K 286–302.

K 271–283, expenses of agricultural production. The figures for total farm-production expenses, series K 271–283, comprise the aggregate cost to farm operators, or all of that part of gross farm income not retained by farm operators. It includes (1) purchases of feed, livestock, seed, fertilizer, and lime; (2) outlays for the operation of tractors, trucks, and automobiles (excluding the portion assigned to family use); (3) a large number of other current farm operating expenses; (4) charges for maintenance and depreciation of farm buildings, motor vehicles, machinery, and equipment; (5) taxes levied on farm property; (6) wages paid for hired labor, both in cash and in kind; (7) interest paid on farm-mortgage loans; and (8) net rents paid to landlords not living on farms, including that part of Government payments that goes to such landlords and not to farm operators. Other farm rents paid to landlords who are also farm operators are not included, as they constitute offsetting items of income and cost for farm operators as a group.

The estimates of production expenses are generally based on the censuses of agriculture, supplemented by special surveys. For years other than census or survey years, estimates for a specific item have for the most part been derived from relative changes in similar or related series. A combination of two series is frequently used, one indicating changes in quantity, and the other, changes in price. For a few types of costs, however, the records of public or private agencies provide the basis for direct annual estimates.

K 284, realized net income of farm operators from farming. The figures are obtained by subtracting total production expenses from realized gross farm income. The term "realized" is used because the estimates include the value only of farm products sold.

K 285, net change in farm inventories. This series measures the change in physical quantities of livestock and crops on farms, valued at average prices prevailing during the year. For some purposes, particularly for combining with the national income estimates of the nonfarm economy, which measure the net value of production during the calendar year, it is necessary to take into account changes in farm inventories. However, it should be kept in mind that the value of a buildup in inventories is "unrealized" until sold and that prices realized at the time of sale may be considerably different from those prevailing during the year of accumulation.

K 286–302. Farm income—cash receipts from farm marketings, 1910–1970.

Source: U.S. Department of Agriculture, Economic Research Service, *The Farm Income Situation,* annual issues.

Approximately 150 different commodities or commodity groups are included in the data on cash receipts from marketings. Only major groups are shown here. For crops under the Commodity Credit Corporation (CCC) loan program, a CCC loan is treated as a cash receipt. If the crop is later redeemed, the outlay required is treated as an offset to cash receipts.

See also text for series K 264–270.

K 303–325. Farm marketings, by price support status, 1930–1970.

Source: See source for series K 286–302.

The Department of Agriculture has conducted price support programs for a number of agricultural products since 1933 when supports and production controls were authorized by the Agricultural Adjustment Act of 1933. The purpose of these programs is to provide farmers certain dollars-and-cents prices for specified products as an adjunct to orderly production and marketing practices. Price support is provided primarily through nonrecourse loans and purchase agreements with farmers or by purchases from processors and others. Supplies acquired by the Department of Agriculture under such programs are stored and returned to commercial channels when needs arise.

Over the years subsequent legislation has often changed the number of commodities under support, the means of supporting prices, and the rules for determining the level of support. Mandatory commodities are those for which the Secretary of Agriculture must provide support; support for nonmandatory commodities is discretionary with the Secretary. Series K 303–325 lists farmers' cash receipts from marketings, by commodity, under legislation in effect in 1969. Marketings include gross receipts from commercial market sales as well as unredeemed loans and purchases under price support programs.

K 326–329. Direct Government payments to farmers, by program, 1933–1970.

Source: See source for series K 286–302.

Direct Government payments to farmers are those made in connection with the farm programs shown in series K 326–329 (Conservation, Sugar Act, and Cotton), as well as those included in the total but not shown: Soil bank, wool, feed grain, wheat, rental and benefits, price adjustment and parity; wartime production subsidy; and cropland adjustment. These payments do not involve commodity transactions in the form of nonrecourse loans but are made directly to farmers who participate in specified farm programs.

K 330–343. Commodity Credit Corporation—summary, 1934–1970.

Source: U.S. Department of Agriculture, Agricultural Stabilization and Conservation Service, *Commodity Credit Corporation Report of Financial Condition and Operations,* annual issues.

The Commodity Credit Corporation (CCC) is a wholly-owned Government corporation. Its purpose is stabilizing, supporting, and protecting farm income and prices; assisting in the maintenance of balanced and adequate supplies of agricultural commodities; and facilitating their orderly distribution. Originally incorporated October 17, 1933, with a capitalization of $3 million, CCC was initially managed and operated in close affiliation with the Reconstruction Finance Corporation, which funded its on-going operations. On July 1, 1939, it was transferred to the Department of Agriculture by the President's Reorganization Plan I; and on July 1, 1948, it was reincorporated as a Federal corporation within the Department of Agriculture by the Commodity Credit Corporation Charter Act. Management of CCC is vested in a Board of Directors, subject to the general supervision and direction of the Secretary of Agriculture. The Board consists of six members, in addition to the Secretary as chairman, who are appointed by the President of the United States by and with the advice and consent of the Senate.

CCC has an authorized capital stock of $100 million held by the United States and authority to borrow up to $14.5 billion from the U.S. Treasury and from private lending agencies. Each year CCC submits, in the budget of the United States, the programs it expects to carry out in the coming year. Upon approval of the budget by the Congress, this becomes its basic operating plan for the fiscal year.

CCC's price support programs, and domestic acquisition and disposal activities for price support commodities, are carried out entirely through the Agricultural Stabilization and Conservation Service (ASCS).

Commodity support programs include (1970) those for wheat, corn, cotton (upland and extra long staple), rice, tobacco, milk and milk products, wool, mohair, tung nuts, barley, oats, grain sorghum, rye, flaxseed, soybeans, dry edible beans, honey, crude pine gum, and peanuts. These support operations are handled primarily through loan, purchase, and payment programs.

CCC is directed to utilize, to the maximum extent practicable, the customary channels, facilities, and arrangements of trade and commerce in carrying on purchasing and selling activities, and in conducting warehousing, transporting, processing, and handling operations.

CCC may contract for the use of plants and facilities for the handling, storing, processing, servicing, and transporting of agricultural commodities subject to its control; it has authority to acquire personal property and to rent or lease office space necessary for the conduct of its business.

Commodities from the price support inventory are moved into consumption outlets in various ways. Some commodities are sold for domestic uses in the United States, and some are sold for export, including those under the CCC Export Sales Program and programs authorized under Title I of Public Law 480. Some commodities are bartered for goods and services to fill U.S. Government needs abroad, and for foreign produced strategic and critical materials for stockpiling. In addition, commodities are donated through Federal, State, and private agencies for use in child nutrition programs and in the assistance of needy persons in the United States; commodities are transferred for donation through U.S. welfare organizations and intergovernmental organizations to needy persons and child feeding programs abroad; and dairy products are transferred for use by the Veterans Administration and by the Department of Defense. Some grains are donated to aid livestock producers in declared acute economic distress and major disaster areas; some grains are sold at reduced prices to livestock producers in areas where feed is short due to drought, flood, hurricane, or other catastrophe.

K 344-353. Indexes of prices received and paid by farmers, and parity ratio, 1910-1970.

Source: U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Prices: Annual Summary*, various issues.

The indexes of prices received and paid by farmers are compiled from the series of prices received by farmers for commodities sold and the series of prices paid by farmers for commodities bought.

The basic concept involved in series K 344-346 is that of a price which, if multiplied by the total quantity of the commodity sold, would give the total amount received by all farmers for that commodity. That is, prices received by farmers are estimated to reflect sales of all classes and grades of the commodity being sold. They reflect discounts for poor quality and premiums for high quality. Estimates relate generally to average prices farmers receive for their products at the point of first sale, usually at a local market, or at the point to which farmers deliver their products.

The Statistical Reporting Service (SRS) estimates midmonth or monthly average prices each month for about 95 of the more important crop and livestock items, and for 17 seasonal items in season. Prices of about 100 additional items are estimated on an annual or season average basis only. These crops have either relatively short marketing seasons, are of relatively minor importance, or are used for processing and sold mainly on contracts covering the entire season.

Prices received by farmers for products they sell were collected from various primary sources, but mostly from voluntary reporters. In general, price reporters were classified in the following broad groups: (1) Country merchants; (2) farm produce dealers at local shipping points; (3) country mill and elevator operators; (4) Federal Milk Market Administrators; (5) State milk control agencies; (6) managers of milk distributing or manufacturing plants; (7) cooperative marketing organizations; (8) country bankers; and (9) well-informed farmers.

Most of the data on prices received were collected by means of a mailed questionnaire supplemented by enumerative checks of various types, depending on the commodities in question. Prices of beef cattle were collected by enumeration of actual sales by commission firms and to buyers at auctions in a number of States.

Estimates of prices paid by farmers, series K 347 and K 348, relate to average prices paid for a wide variety of items. The prices were obtained from the sellers and considered as being at the seller's location, unless otherwise specified. Since prices received were estimated to reflect sales of all classes and grades of the commodity being sold, a comparable concept was used in connection with prices paid, so as to reflect changes in items bought by farmers, such as grade, quality, and size of container; that is, to reflect the average price of things farmers bought under the economic conditions existing at the time of purchase.

Ideally, to maintain conceptual similarity to prices received, the price paid for a given item should be the average price which results from dividing the total amount farmers spent for the item in a given period by the number of items bought. However, it was impossible to obtain the data needed for such a computation, and in pricing most items emphasis was placed on the kind "most commonly bought by farmers," or the "volume seller," as the closest approximation.

The commodity coverage of the prices paid series embraced most, but not all, of the major areas of expenditure and each area was represented by a sample of items. The areas covered were divided into two main groups, those bought for family living (food, clothing, household furnishings, household operation, autos and auto supplies, and building materials bought for farm home construction and repair), and those bought for production purposes (feed, feeder livestock, motor supplies, motor vehicles, farm machinery, building materials for service buildings, fencing materials, fertilizer, farm supplies, and seed). Farm family expenditures excluded medical, dental, and hospital services; a variety of personal and financial services; and services performed on a custom or fee basis such as hay baling, threshing, plowing, spraying, fertilizing, and the like.

Prices paid information was collected from samples consisting mainly of stores handling commodities purchased by farmers. Farmers comprise the data source for certain commodities or services such as feeder pigs purchased and cost of electric or telephone service.

The index of prices received by farmers is a measure of the changes in average prices that farmers receive for agricultural commodities that they sell. The parity index (index of prices paid by farmers for commodities and services, including interest, taxes, and wage rates) is a measure of changes in average prices paid by farmers for goods and services used in family living and in production, together with interest, taxes, and farm wage rates. The base period for both is 1910-14, by law. A third important measure, known as the parity ratio, consists of the relationship between these two indexes, series K 353. The parity ratio measures the purchasing power of products sold by farmers in terms of things they buy compared to their purchasing power in the base period 1910-14. As of any given date it is computed by dividing the index of prices received by farmers by the parity index. If the result is above 100, products sold by farmers have an average per unit purchasing power higher than in 1910-14. When the result is below 100, the average per unit purchasing power of commodities sold by farmers is less than in the base period.

The parity ratio approximates a weighted average of the percentages of parity for individual farm commodities, but is not exact, mostly for the reason that the index of prices received by farmers is based on 56 of the most important commodities sold by farmers, but not all of them. The parity ratio is a price comparison. It is not a measure of cost of production, standard of living, or income parity.

The last general revision of these indexes was made January 1, 1959, at which time a detailed description of the weighting structure and sources was published in *The January 1959 Revision of the Price Indexes*. For the parity index the weighting pattern for the 450-price series in the index was derived from a survey of farmers' expenditure patterns in 1955. The quantity weights applied to the various price series represent the average quantities of each commodity bought by farmers during 1955. For the index of prices received by farmers the quantity weights were the average quantities of farm products sold by farmers over the 5-year period centered on 1955, that is 1953-57. Since 1955, only minor shifts in commodities have been made as certain new items have replaced older ones. The description of the indexes published in 1959 is still applicable. However, the 1910-14 base required by law is now over 50 years distant. To provide comparability with other national indexes, the index of prices received by farmers and the parity index were converted to the 1967 base prescribed by the Office of Management and Budget, for use

by Federal agencies generally. However, mere arithmetic conversion to a different reference base is no substitute for initial computation of the indexes on a modern base.

To find any extensive list of commodities commonly bought both now and a half-century ago is obviously impossible. What has been done as the best possible alternative is to construct these indexes in three links. The first link covers the period 1910 to March 1935, and uses commodities common to that period and weights based on data representing an average for 1924–29. The second link covers the period March 1935 to September 1952, using commodities common to that period and weights representative of 1937–41. The third link runs from September 1952 to the present (1970), and uses weights representing 1955 for the parity index and 1953–57 for prices received. Each of these links provides reasonable homogeneity in commodity structure and a reasonably good measure of price relationships over the period covered. By linking the three indexes together, a comparison of the present with 1910–14 is provided as required by law.

K 354–357. Farm-to-retail price spreads of farm food products, 1913–1970.

Source: U.S. Department of Agriculture, Economic Research Service, *Farm-Retail Spreads for Food Products*, Miscellaneous Publication No. 741, 1972.

The market basket contains the average quantities of domestic farm-originated food products purchased annually per household in 1960–1961 by wage earners, clerical-worker families, and workers living alone. To maintain comparability, the 1961–1962 market basket was linked at 1957 to a market basket containing the quantity of farm food purchased annually by wage earner and clerical-worker families in 1952. The series was also linked at 1947 to a market basket containing the quantities of food purchased annually by a family in 1935–1939. Dollar values for 1913–1946 were derived from index numbers published in the source. Current data are published by the Economic Research Service in *The Marketing and Transportation Situation*.

Retail costs are calculated from retail prices published by the Bureau of Labor Statistics. The retail cost of market basket foods is less than the cost of all foods bought per household because it does not include the cost of meals in eating places, imported foods, and seafood or other foods not of farm origin. Farm value represents payments to farmers, exclusive of government subsidies, for unprocessed products equivalent to the foods in the market basket. The farm-retail spread is the difference between retail cost and farm value. It represents the total gross margin received by marketing firms for assembling, processing, transporting, and distributing the products of the market basket.

K 358–360. Consumer expenditures, farm value, and marketing bill, for all farm food products purchased by domestic civilian consumers, 1913–1970.

Source: U.S. Department of Agriculture, Agricultural Marketing Service, 1913–1947, *Farm-Retail Spreads for Food Products*, Miscellaneous Publication No. 741, 1957; Economic Research Service, revised figures for 1929, 1935, and 1939, *The Farm Food Marketing Bill and Its Components*, AER No. 105, 1967; 1947–1970, *Marketing and Transportation Situation*, August 1971.

Consumer expenditures for farm foods, series K 358, represent the market value of foods originating on U.S. farms and purchased by or for civilian consumers in this country. Included are expenditures for food in retail stores and for food bought directly from farmers, processors, and wholesalers and served in restaurants and other away-from-home eating establishments; the value of food served by schools, hospitals, and other institutions, and of food furnished by employers to civilian employees; and sales taxes and tips. Excluded are expenditures for imported foods, fish and other foods not originating on U.S. farms, and alcoholic beverages; the value of food furnished by the Government to members of the Armed Services; and the value of food consumed on farms where it is produced.

Farm value, series K 359, is the value at the point of sale by the farmer of the farm products equivalent to foods purchased by or for civilian consumers. It does not include the imputed values of nonfood byproducts derived from processing farm food products.

The marketing bill, series K 360, is an estimate of the total cost of transporting, processing, and distributing U.S. farm-originated foods purchased by civilian consumers. It is the difference between consumer expenditures and farm value. Unlike the farm food market basket statistics, series K 354–357, the marketing bill statistics are affected by changes in the volume and type of products marketed and in the quantity of marketing services per unit of product marketed. For example, marketing services per unit of product change when the volume of foods served in eating establishments increases or decreases relative to the volume moving through retail food stores. They may also change when the volume of processed products changes relative to the volume of unprocessed products.

Benchmark estimates of consumer expenditures, farm value, and the marketing bill have been made for census years back to 1929 for the revised series by the commodity flow method. Annual estimates, derived by a less comprehensive method, have been used to interpolate for interbenchmark years back to 1947 and to extrapolate for years since the last benchmark estimate (1958). See *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 4.

K 361–369. Farm-mortgage debt outstanding and loans closed, 1910–1970.

Source: 1910–1928, U.S. Department of Agriculture, Agricultural Research Service and Economic Research Service; U.S. Bureau of the Census; Farm Credit Administration; and Federal Deposit Insurance Corporation. For specific sources, see below. 1929–1970, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1967* and *1972* issues. See also *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 6.

Farm-mortgage credit has been referred to as farm-real-estate credit, long-term credit, or capital credit. The data presented here, however, merely represent the amount of credit secured by farm real estate, whether it is extended for a short term or a long term, whether it is used for purchasing the farm, operating the farm, or financing nonagricultural activities, and whether the loan instrument is a mortgage, deed of trust, vendor's lien, or sales contract.

Estimates of farm-mortgage debt outstanding at the beginning of each year, series K 361, are based upon census data and special surveys. Data on mortgage debt on farms operated by full owners appear in each census back to 1890, except that for 1900. In 1890, 1940, 1945, 1950, 1956, 1961, and 1966, similar information was collected on the owned part of part-owner farms.

Mortgage data may be found in the following reports of the Bureau of the Census: Eleventh Census, 1890, *Report on Real Estate Mortgages*; Thirteenth Census, 1910, *Agriculture*, vol. V, chap. 3; Fourteenth Census, 1920, *Agriculture*, vol. V, chap. 7; Census of Agriculture, 1925, *Summary Statistics by States*; Fifteenth Census, 1930, *Agriculture*, vol. IV, chap. 6; Sixteenth Census, 1940, *Agriculture*, vol. III, chap. 4; *Census of Agriculture, 1964*, vol. III, Special Reports, pt. 4, Farm Debt. Data for 1935, 1945, 1950, 1956, and 1961 are in three cooperative publications—Bureau of the Census and Bureau of Agricultural Economics, *U.S. Census of Agriculture: 1950*, vol. V, pt. 8; Bureau of the Census and Agricultural Research Service, *U.S. Census of Agriculture: 1954*, vol. III, pt. 5; and Bureau of the Census and Economic Research Service, *U.S. Census of Agriculture: 1959*, vol. V, pt. 4.

In 1920, 1928, and 1930 the Bureau of Agricultural Economics conducted surveys on which estimates of debt on farms operated by part owners, tenants, and managers were based. The Bureau

of the Census and the Bureau of Agricultural Economics cooperated in the 1935, 1940, 1945, 1950, 1956, and 1961 surveys. The Bureau of the Census conducted the 1966 survey. The results of the 1928 survey, which included 1925 data, were published in Department of Agriculture, *Farm-Mortgage Credit*, Technical Bulletin No. 288, February 1932. Results of the later surveys appear in the three cooperative publications and *Census of Agriculture: 1964*, Special Report, referred to above. Some earlier census-year estimates were revised on the basis of relationships established by the more recent surveys to make estimates for all census years more comparable.

Estimates for intercensal years are based on data for mortgages held by certain lending agencies, on estimates of farm mortgages recorded annually by major lender groups, and on the distribution by lenders of farm-mortgage debt in the last preceding census. Whenever a new census-year benchmark was established, the intercensal-year estimates were revised to reflect the new trend. For the years prior to 1935, the data on mortgages recorded were compiled from the records of selected counties through a nationwide Works Progress Administration project sponsored by the Bureau of Agricultural Economics. For 1935–1970, this information was collected by the Farm Credit Administration. Revisions of annual debt estimates for 1950–1957 appear in Agricultural Research Service, *Farm-Mortgage Debt Rises in 1957*, ARS 43–59, September 1957. A number of publications of the Bureau of Agricultural Economics contain annual estimates of farm-mortgage debt revised to the last census-year benchmark preceding the date of publication: *Revised Annual Estimates of Farm-Mortgage Debt by States, 1930–1943*, April 1944; *Distribution by Lender Groups of Farm-Mortgage and Real Estate Holdings, January 1, 1930–1945*, August 1945; *Farm-Mortgage Loans and Their Distribution by Lender Groups, 1940–1948*, USDA Circular No. 812, August 1949; *Agricultural Finance Review*, vol. 15 supplement I, May 1953, which has annual data by States for 1945–1953; *Farm Mortgage Debt*, FMD-1, May 1963, which has annual data by States for 1950–1962; *Farm Mortgage Debt*, FMD-3, October 1964, which has annual data by States for 1963–1964; *Farm Mortgage Debt*, FMD-5, October 1966, which has annual data by States for 1965–1966; *Farm Mortgage Debt*, FMD-7, December 1968, which has annual data by States for 1967–1968; *Farm Mortgage Debt*, FMD-9, November 1970, which has annual data by States for 1960–1970.

K 362 and **K 368**, Federal land banks and FFMC. The Federal land banks were organized pursuant to the Federal Farm Loan Act of 1916 and became important lenders in the farm-mortgage field, particularly after 1933. The data on loans outstanding and loans closed are from publications of the Farm Credit Administration or its predecessor, the Federal Farm Loan Board. Land Bank Commissioner loans, first made under the authority of the Emergency Farm-Mortgage Act of 1933, were taken over by the Federal Farm Mortgage Corporation upon its creation in 1934 and were continued until July 1, 1947, when authority to make new loans, except those incidental to liquidation, expired. In 1955, the remaining outstanding loans of the Corporation were sold to the Federal land banks. For a discussion of these agencies, see Department of Agriculture, *Farm-Mortgage Credit Facilities in the United States*, Miscellaneous Publication No. 478, 1942, and annual reports of the Farm Credit Administration.

K 363, life insurance companies. Figures on farm-mortgage debt held by life insurance companies are estimates of the Bureau of Agricultural Economics, the Agricultural Research Service, and the Economic Research Service, and refer to unpaid principal owed to the companies. The estimates are compiled from reports of life insurance companies, "Best's Life Insurance Reports," "Spectator Life Insurance Yearbook," and data from the Life Insurance Association of America and the Institute of Life Insurance. The data for 1910–1929 include the unpaid principal of regular mortgages only; for 1930–1970, they also include the unpaid principal of purchase-money mortgages and, prior to 1965, farm real estate sales contracts. Beginning 1965, they exclude sales contracts. See also the following Department of Agriculture publications: *Farm-Mortgage Loans Held by Life Insurance Companies*, ARS 43–58, October 1957; *Farm Investments of Life Insurance Companies, 1956*, ARS 43–57, October 1956; and *Farm-Mortgage Investments of Life Insurance Companies*, December 1943.

K 364, commercial and savings banks. Figures on farm-mortgage debt held by commercial and savings banks for 1910–1947 do not cover all banks, but they do represent a very large proportion of all bank loans on farm real estate. For 1910–1934, the data include only open State and national banks, and are estimates prepared by the Bureau of Agricultural Economics from special surveys and reports of bank supervisory authorities. (See *Agricultural Loans of Commercial Banks*, USDA Technical Bulletin No. 521, July 1936, for a discussion of these special surveys.) For 1935–1947, the data include only farm-mortgage loans of insured commercial banks as summarized in reports of the Federal Deposit Insurance Corporation. For 1948–1970, the data include farm-mortgage debt held by all operating banks—commercial, savings, and private—as compiled by the Federal Deposit Insurance Corporation and published in annual reports of the Comptroller of the Currency, and also bank holdings of soil and water loans and farm-ownership loans insured by the Farmers Home Administration. Sales contracts on farm real estate may or may not be included in the figures, because banks often classify such contracts with the real estate owned. The figures do not include loans of closed banks, of mutual savings banks before 1948, nor of noninsured commercial banks for 1935–1947.

K 365 and **K 369**, joint-stock land banks. The joint-stock land banks also authorized under the Federal Farm Loan Act of 1916, were under Federal supervision and regulation, but differed from the Federal land banks in that they were privately owned. Their organization and growth are discussed in C. H. Schwartz, Jr., *Financial Study of the Joint-Stock Land Banks*, Washington College Press, Takoma Park, Md., 1938, as well as in the publications cited above for Federal land banks. Liquidation of the joint-stock banks was called for in the Emergency Farm Mortgage Act of 1933 and was completed in 1951. For several Federal and federally sponsored agencies, "loans closed" include only their regular loans as distinct from purchase-money mortgages and sales contracts, and they are not necessarily comparable with "loans recorded" by other lender groups.

K 366, Farmers Home Administration. Data from the Farmers Home Administration, formerly Farm Security Administration, include farm-purchase, farm-enlargement, farm-development, project-liquidation, and direct soil and water loans to individuals, loans for these purposes from State Corporation trust funds, and rural-housing loans to farmers.

K 367, individuals and others. Individuals are by far the most important holders of farm mortgages. Because of its residual nature, this general lender group also includes many miscellaneous sources of farm-mortgage credit, including mortgage, real estate, finance, and investment companies; State and local governmental agencies; religious, educational, civic, and fraternal organizations; mercantile firms dealing largely in farm supplies; lending agencies operating chiefly in the urban mortgage field but sometimes lending on farmland; corporations and associations chiefly engaged in making production loans but sometimes requiring real estate as security. In addition to these are the loans of mutual savings banks, for 1910–1947; closed commercial banks; noninsured commercial banks for 1935–1947; insurance companies other than life insurance companies; and certain types of loans not specifically included in the figures for the major lending groups.

K 370–372. Interest payable on farm mortgages, 1910–1970.

Source: 1910–1948, U.S. Department of Agriculture, Agricultural Research Service and Farm Credit Administration, unpublished data; **series K 370**, 1949–1964, Economic Research Service, annual releases with various titles; 1965–1969, *Agricultural Finance Review* and supplements, annual volumes; **series K 371–372**, 1949–1970, Statistical Reporting Service, *Agricultural Statistics, 1967* and *1972* issues, and Economic Research Service, *Agricultural Finance Review*, vol. 32 supplement, January 1972.

These data represent average contract rates. They are averages of the rates charged by the various types of lenders weighted by the amount of mortgages recorded or held by each. Furthermore, they are averages of rates on all farm mortgages regardless of their priority. Year-to-year changes in the average rates do not necessarily reflect changes in the level of interest rates charged by the different lenders but may represent changes in the distribution among the lender groups of loans recorded or held. The averages are based on the rates specified in the mortgage contract and payable by borrowers during the calendar year; they do not necessarily represent averages of the rates actually paid, except that for rates on outstanding mortgages, they do reflect the temporarily reduced rates of the Federal land banks for 1934–1944 and of the Federal Farm Mortgage Corporation for 1938–1945.

Some information either on interest rates or interest charges on outstanding mortgages was obtained in the censuses of agriculture for 1890, 1920, 1930, and 1940.

K 370, interest rates on loans recorded. Interest rates on mortgages recorded come from two sources. Rates for 1910–1935 were developed from data obtained in a nationwide Works Progress Administration project sponsored by the Bureau of Agricultural Economics (see that agency's *Average Rates of Interest Charged on Farm-Mortgage Recordings of Selected Lender Groups,* November 1940).

The averages for odd-numbered years from 1941 to 1953 are estimates of the Farm Credit Administration based on mortgages recorded during the month of March in approximately one-third of the counties in the United States. For 1955–1965, the average interest rates are based on mortgages recorded in the first quarter of the year. For 1967 and 1969, the average interest rates are based on mortgages recorded in the first half of the year.

K 371, interest rates on loans outstanding. Average interest rates on outstanding mortgages for 1937–1970 are based on data obtained by the Bureau of Agricultural Economics, the Economic Research Service, the Agricultural Research Service, and the Bureau of the Census in special surveys made in census years and from Farm Credit Administration surveys of farm-mortgage recordings made in selected months of intercensal years. For 1910–1936, the rates are based on the WPA data mentioned above. Rates on mortgages recorded as reported in the WPA project were converted to rates on outstanding mortgages by assuming that all mortgages recorded remained in effect for a period equal to the average of the terms of years specified in the mortgage contracts. This procedure was used for all lender groups except the Federal land banks and Federal Farm Mortgage Corporation for which averages were computed from information on the amount of loans outstanding at various interest rates. (See Bureau of Agricultural Economics, *Interest Charges Payable on Farm Indebtedness in the United States, 1910–40,* August 1942.) Some of the data for years after 1930 were later revised; see Bureau of Agricultural Economics, *Revised Annual Estimates of Interest Charges and Interest Rates on Farm-Mortgage Debt, 1930–43,* October 1944, and USDA Circular No. 821, *Farm-Mortgage Interest Charges and Interest Rates, 1940–48,* October 1949.

K 372, interest charges payable. Figures for interest charges payable were developed from the estimates of farm-mortgage debt outstanding at the beginning of each year and the average interest rates charged thereon, except in the case of the Federal land banks and the Federal Farm Mortgage Corporation. Calendar-year estimates were computed by averaging the charges payable on debts outstanding at the beginning of each year and the beginning of the succeeding year. For the Federal land banks and the Federal Farm Mortgage Corporation, the actual amounts of interest charges payable on their outstanding loans during the calendar year were obtained from the Farm Credit Administration. These amounts, of course, excluded those charges no longer payable because of the interest reductions granted to borrowers.

K 373–375. Taxes levied on farm property, 1890–1970.

Source: U.S. Department of Agriculture, Economic Research Service, **series K 373–374,** *Farm Real Estate Taxes, Recent Trends and Developments,* January 1972; **series K 375,** 1924–1967, *Personal Property Taxes Levied on Farmers, 1950 to 1967,* Statistical Bulletin No. 447, March 1970; 1968–1970, unpublished data.

These data cover all ad valorem taxes levied upon farm property by State and local governments. They do not cover special assessments such as those levied by drainage, irrigation, or other special districts. Farm real estate comprises all land defined by the Bureau of the Census as land in farms, and structures thereon (see general note for series K 1–203). Farm personal property covers all livestock, machinery, automobiles, trucks, produce, and household and personal effects. Much personal property on farms is not taxed, either because of statutory exemptions or through faulty assessment.

Taxes include those levied on farm property whether owned by the operator or not. They do not necessarily represent taxes paid by farmers. "Levies" rather than "payments" are shown because the timing of actual payments is uncertain.

Real estate tax figures are developed from data for sample farms obtained from local tax officials and from data in the censuses of agriculture for 1930, 1940, 1950, and 1960. The acreages used in computing taxes per acre are census data for farmland in private ownership, with interpolations for intercensal years. The values used in computing taxes per $100 of value are based on census data of operator estimates of value, with interpolations for intercensal years based on the ERS index of farmland values. For a more detailed discussion, see U.S. Department of Agriculture, *Major Statistical Series of the U.S. Department of Agriculture,* Agriculture Handbook 365, vol. 6.

Personal property tax figures are developed from statistical data on assessed values and taxes published by State tax commissions, boards of equalization, or similar bodies.

K 376–380. Non-real-estate agricultural loans outstanding, 1910–1970.

Source: **Series K 376–379,** 1910–1934 and 1936–1938, Federal Farm Loan Board and Farm Credit Administration, unpublished data; 1939 and 1941–1944, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1967;* 1935, 1940, and 1945–1970, Economic Research Service, *Agricultural Finance Review,* vol. 32 supplement, January 1972. **Series K 380,** 1934–1938, see source for series K 376–379; 1939–1970, *Agricultural Statistics, 1967* and *1972* issues.

See also specific sources mentioned below.

Non-real-estate credit, variously called short-term credit, personal and collateral credit, or production credit, is obtained by farmers from many sources including banks, Federal and federally sponsored credit agencies, merchants, dealers, commission men, finance companies, landlords, and other individuals. Commercial banks have provided the bulk of this type of credit extended by credit institutions although, since the early 1930's, Federal and federally sponsored agencies and finance companies have become important in this lending field. The volume of non-real-estate credit extended by sources other than banks and Federal agencies is believed to have been about $3½ billion in recent years; however, data for precise estimates are lacking.

Since 1939, non-real-estate agricultural loan data of all operating commercial banks have been available from the Comptroller of the Currency and the Federal Deposit Insurance Corporation. Since 1936, similar loans of insured commercial banks, whose loans comprise about 97 percent of the loans of all banks, have been regularly reported by the Federal Deposit Insurance Corporation. For earlier years, the only data of this type available are from Department of Agriculture surveys made in 1914, 1918, 1921, 1924, 1931, 1934, and 1936, all of which (except for 1936) are discussed in that Department's *Agricultural Loans of Commercial Banks,* Technical Bulletin No. 521, July 1936. Upon the basis of these survey data and of data on all loans of "country" national banks for intervening years, estimates have been made back to 1910. See *Agricultural Finance Review,* "Short-Term Agricultural Loans of Commercial Banks, 1910–1945," vol. 8, November 1945; and *Major Statistical Series of the U.S. Department of Agriculture,* Agriculture Handbook No. 365, vol. 6.

The Federal Government first entered the non-real-estate agricul-

tural credit field in 1918 when it made available $5 million for direct loans to farmers in the Northwest and Southwest where there had been two successive crop failures. During the 1920's, seed and feed loans were made available from time to time in certain "distressed" areas by special Acts of Congress. In the early 1930's, the basis for lending was broadened and the Emergency Crop and Feed Loan Office came to be the more-or-less permanent source of credit for farmers in distress. The Farmers Home Administration Act of 1946 transferred the activities of the Emergency Crop and Feed Loan Office from the Farm Credit Administration to the newly created Farmers Home Administration (successor to the Farm Security Administration) and provided for the liquidation of these loans. Thereafter, any loans of this character were made by the Farmers Home Administration under the provisions of the new law and are not included in this series. For a further discussion of the crop and feed loan program, see Department of Agriculture, *Federal Seed-Loan Financing and Its Relation to Agricultural Rehabilitation and Land Use*, Technical Bulletin No. 539, October 1936; and reports of the Farm Credit Administration.

The Agricultural Credits Act of 1923 created the Federal intermediate credit banks, the first permanent federally sponsored credit agencies making non-real-estate loans available to farmers. These banks make no loans directly to farmers, but they do make loans to and discount loans for private financing institutions (agricultural credit corporations and livestock loan companies). Loans discounted by the Federal intermediate credit banks for the production credit associations since their organization in 1933 are not included here. See Frieda Baird and Claude L. Benner, *Ten Years of Federal Intermediate Credits*, The Brookings Institution, Washington, D.C., 1933; and reports of the Farm Credit Administration.

The same 1923 Act also authorized the Federal intermediate credit banks to provide loans to and discounts for agricultural cooperatives; that is, direct loans to marketing cooperatives on the security of commodities. In 1933, special legislation authorized the creation of the "banks for cooperatives," which, by 1936, had largely taken over the function of the intermediate credit banks in making loans to cooperatives. A part of the loan funds of the "banks for cooperatives," however, is supplied by the Federal intermediate credit banks.

K 381–383. Indexes of deposits of country banks, 1925–1970.

Source: 1926–1929, 1931–1934, 1936–1939, 1941–1944, data compiled by U.S. Department of Agriculture, Economic Research Service, and are unpublished; 1925, 1930, 1935, 1940, 1945–1970, Statistical Reporting Service, *Agricultural Statistics, 1972*.

The indexes for demand, time, and total deposits are based upon deposits of member banks of the Federal Reserve System, located in places of less than 15,000 inhabitants in the 20 leading agricultural States. Prior to 1966, annual indexes are simple averages of monthly indexes, which are based on average amounts of daily deposits. Beginning 1966, data available were as of June 30 and December 31. In preparing indexes for groups of States, the amount of deposits for each State were weighted by the cash farm income of each State in the base period. Beginning December 1959, U.S. Government deposits are excluded from the base data for demand deposits. See Department of Agriculture, *Demand Deposits of Country Banks*, Technical Bulletin No. 575, August 1937; *Agricultural Finance Review Supplement*, vol. 32 supplement, January 1972; and *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook No. 365, vol. 6.

★★★★★★★★★★ **More Recent Data for *Historical Statistics* Series** ★★★★★★★★★★

Statistics for more recent years in continuation of many of the still-active series shown here appear in annual issues of the ***Statistical Abstract of the United States***, beginning with the 1975 edition. For direct linkage of the historical series to the tables in the ***Abstract***, see Appendix I in the ***Abstract***.

Series K 204–219. Balance Sheet of the Farming Sector: 1940 to 1970

[In billions of dollars. As of January 1. Excludes Alaska and Hawaii]

[1] Beginning 1961, excludes horses and mules.
[2] Includes crops held on farms and crops held off farms by farmers as security for CCC loans. On Jan. 1, 1970, the latter totaled $1,184 million.
[3] Nonrecourse CCC loans secured by crops owned by farmers and included as assets.
[4] Loans of all operating banks, production credit associations, Farmers Home Administration, and discounts of Federal intermediate credit banks for agricultural credit corporations and livestock loan companies.
[5] Loans and credit extended by dealers, merchants, finance companies, individuals, and others.

Series K 220–239. Value of Gross Farm Product in Current and Constant (1958) Dollars: 1929 to 1970

[For explanation of concepts of gross product and national income, and current and constant dollars, see text for series F 1–5, F 6–9, and F 47–70]

NA Not available.
Z Less than $500,000.
[1] Price support commodities only.

[2] Prior to 1953, inventory dollar transactions include costs incurred subsequent to acquisition of title, such as storage, handling, transportation, and cost of storing certain grains while under extended loan.
[3] Beginning 1953, includes storage and handling expense and reseal loan storage expense.

[1] For 1913–1947, consumer expenditures for farm foods eaten away from home are based on retail food store prices.
[2] Comparable with later years. Beginning 1947, new series based on 1958 benchmark estimate (see text).
[3] Comparable with earlier years.
[4] Revised figures according to the commodity flow method; comparable to 1947–1970 data based on 1958 benchmark estimate.

Series K 361–375. Farm-Mortgage Debt, Loans, and Interest: 1890 to 1970

[In millions of dollars, except as indicated. Loans held by Federal Farm Mortgage Corporation (FFMC) are those made by Land Bank Commissioner. Land Bank Commissioner loans first made in 1933; in 1934 and thereafter made on behalf of FFMC. Authority to make new loans, except incidental to liquidation, expired July 1, 1947. On June 30, 1955, loans of the FFMC were sold to the 12 Federal land banks. Joint-stock land banks have been in liquidation since May 12, 1933; includes banks in receivership]

NA Not available. Z Less than $50,000.

[1] Beginning 1930, includes purchase-money mortgages and sales contracts in addition to regular mortgages.

[2] Includes soil and water conservation loans and farm-ownership loans insured by Farmers Home Administration.

[3] Beginning October 1961, rural-housing loans were made on nonfarm tracts; these loans are included in amount outstanding reported for Jan. 1, 1962, but excluded beginning 1963.

[4] Average contract rates, except for temporarily reduced rates on outstanding loans of Federal land banks, 1934–1944, and Federal Farm Mortgage Corporation, 1938–1945.

[5] Payable during calendar year on outstanding loans. Excludes amounts paid by Secretary of the Treasury to Federal land banks, 1933–1944, and Federal Farm Mortgage Corporation, 1937–1945, as reimbursement for interest reductions granted borrowers.

[6] Average of rates on mortgages recorded during month of March except, beginning 1955, average rates on recordings during first quarter, and, beginning 1967, average rates on recordings during first half of year.

[7] Beginning 1960, includes data for reporting lending institutions in Alaska and Hawaii. No estimates of total farm-mortgage debt for these States are available.

* Denotes first year for which figures include Alaska and Hawaii.
Z Less than $500,000.
[1] Data for 1935–1966 include loans guaranteed by Commodity Credit Corporation.
[2] Includes operating loans, emergency loans, emergency crop and feed loans, and, beginning 1966, economic opportunity loans; prior to 1933, only emergency crop and feed loans.
[3] Loans to, and discounts for, livestock loan companies and agricultural credit corporations.
[4] Based upon deposits of member banks of the Federal Reserve System located in places of less than 15,000 population: Ark., Ill., Ind., Iowa, Kans., Ky., Mich., Minn., Mo., Nebr., N.Y., N.C., N. Dak., Ohio, Okla., Pa., S. Dak., Tex., Wash., and Wis.
[5] Average of 7 months.
[6] July 1 of previous year.

Chapter K

Farm Productivity (Series K 384-495)

K 384–391. Index of supply and utilization of farm commodities as a percentage of total annual net utilization, 1924–1970.

Source: U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1967*, p. 542, and *1972*, p. 535.

This index is based on the disappearance data described in series G 881–915, converted to farm level, weighted by average 1957–59 farm prices to derive value aggregates in terms of constant dollars. Prices used are midmonth prices received by farmers in 1957–59 weighted by volume of monthly sales during that period. Both food and nonfood commodities are included.

Each part of the index includes processed and unprocessed commodities. Where processing of farm commodities yields byproducts or joint products, the relative economic importance of the various products is retained by apportioning the farm value of the unprocessed commodity according to the ratio of the wholesale value of the several resulting end products. For processed commodities where no byproduct or joint product is involved, direct conversion to the farm weight is made. See also Agriculture Handbook No. 91, *Measuring the Supply and Utilization of Farm Commodities*, 1955.

K 384, net production. Includes harvested crops (excluding amount used for feed and seed) and marketings of livestock products for consumption plus use on farms where produced.

K 385, net imports. Imports and inshipments from U.S. outlying areas include farm commodities similar to those produced in this country plus those not produced domestically but which are substitutes for U.S. products. Coffee, tea, cocoa, and bananas are included but rubber and silk are excluded. Dockside prices were used for commodities not produced in the United States. Imports include both processed and unprocessed commodities. Imports used for feed and seed are deducted from total imports.

Reports on shipments to and from Alaska and Hawaii were discontinued in April 1948. For foods for which such trade is significant, estimates of inshipments were made through 1959. Beginning 1960, Alaska and Hawaii are included as States.

K 388, civilian food. Figures are derived as a residual by deducting feed, seed, and other nonfood uses, exports and shipments, Government purchases for the military and for export, and ending stocks from total supply of each food available for the year.

K 389, military food. No reliable information on military food procurement is available before 1941, but such takings were relatively small between 1919 and 1940. Data from reports of the Armed Services are supplemented by estimates to cover local procurement of some fresh commodities and items supplied daily.

K 391, exports and shipments. Includes commercial and U.S. Department of Agriculture (USDA) exports and shipments. USDA export programs measure purchases by USDA from commercial sources for subsequent shipments under foreign supply and special export programs. Reports of trade with Alaska and Hawaii were discontinued in 1948 with estimates of some items being made through 1959; beginning 1960, Alaska and Hawaii are included as States.

K 392–406. Value of agricultural raw materials in constant (1967) dollars, 1900–1969.

Source: U.S. Bureau of the Census and U.S. Bureau of Mines, *Raw Materials in the United States Economy: 1900–1969* (Working Paper No. 35, 1972), tables A1–A4 and A7.

These series were obtained by multiplying the physical quantity of each raw material for a given year by the average unit dollar value of the material for 1967, then adding together for the given year all of these dollar values. For materials produced domestically, the unit-value weights represent averages at point of production for all of the specified materials which were produced in the United States in 1967. For materials which were not produced domestically in 1967, the weights usually represent comparable average unit values for materials imported during 1967.

For 1924–1969, the series for production, imports, exports, and consumption, K 392–395, are based primarily on data for supply and utilization of farm commodities developed by the Agricultural Marketing Service (AMS) and extended for 1962–1969 by the Economic Research Service (ERS). (See Major Statistical Series of the U.S. Department of Agriculture, vol. 5, *Consumption and Utilization of Agriculture Products*, Agriculture Handbook No. 118, December 1957, and U.S. Department of Agriculture, *Measuring the Supply and Utilization of Farm Commodities*, Agriculture Handbook No. 91, November 1955.) These data represent over 95 percent coverage and include essentially all farm commodities produced domestically and imported "complementary and supplementary commodities." The latter represent those that do not compete directly with commodities produced in the United States, such as coffee, tea, cocoa, bananas, and some oilseeds. They exclude rubber and other gum products, silk and vegetable fibers, such as sisal, hemp, and abaca, because they compete more directly with industrial products. They also exclude spices. Imports and consumption have been adjusted to include such foreign farm commodities.

The basic data are on a gross basis. They were adjusted to a net basis by excluding seed and feed consumed domestically from production and consumption.

For 1924–1954 the AMS data are in terms of 1947–1949 average farm prices. For 1955–1969, average farm prices for 1957–1959 were used in the AMS and ERS data. These prices represent receipts by farmers for their products sold at local markets or at the point to which they deliver their products in their own conveyances or in local conveyances hired for the purpose. For commodities not produced domestically, import prices for the first domestic transaction were used.

Consumption data include military takings but are adjusted, insofar as possible, to exclude from consumption and treat as exports quantities shipped for civilian use in liberated and occupied areas. Consumption data are also adjusted for changes in stocks and are, therefore, presented as actual rather than apparent consumption.

The AMS and ERS imports and exports data comprise the raw materials equivalent of the major manufactured products produced from agricultural materials.

For years prior to 1924, the AMS commodity group data were extrapolated back to 1900 by use of production, imports, and exports measures for major components of such series or for closely related series. These series are less precise than the measures for 1924 and later years and no attempt was made to adjust the derived apparent consumption figures for this early period for changes in stocks.

The AMS and ERS crop and livestock production data, K 396 and K 400, used for 1924–1969 measure crop production at the point of harvest and livestock products in terms of marketings for consumption. These data represent "gross production of all farm commodities." They have been adjusted to a net basis by excluding feed and seed. These production series were also adjusted to exclude the farm value of imported cattle and hogs.

For 1909–1923, the product group figures were extrapolated from 1924 by means of indexes of production for 12 groups of agricultural products taken from "Volume of Production of Crops and of Livestock Products for Sale and for Home Consumption, 1910–46," *The Farm*

Income Situation, U.S. Department of Agriculture FIS-83, December 1946.

For 1900–1908, production data used for extrapolation were taken from "Gross Farm Income and Indices of Farm Production and Prices in the United States, 1869–1937," by Frederick Strauss and Louis H. Bean, U.S. Department of Agriculture, Technical Bulletin No. 703, December 1940.

The basic source of imports and exports data compiled primarily by the AMS and ERS to measure the supply and utilization of farm commodities is Bureau of the Census imports and exports data. The AMS and ERS figures were supplemented by import figures for rubber, silk, vegetable fibers, and spices not covered by AMS and ERS and by certain imports and exports of cattle, hogs, live horses and mules, and live poultry for breeding.

For years prior to 1924, Bureau of the Census quantity series for imports and exports of commodities which are components of the AMS groups used for later years were combined to the AMS group level by use of unit-value weights.

K 407–409. Persons supplied per farmworker, 1820–1970.

Source: U.S. Department of Agriculture, *Agricultural Statistics*, annual issues.

The series is a ratio of all consumers of U.S. farm products to U.S. farmworkers. The series was designed to provide a simple, easily calculated measure of productivity of people employed in farming—farm operators, unpaid family workers, and hired workers. As a long-time measure, it appraises changes in farmworker efficiency. It is not intended to be a precise index of slight year-to-year variations in worker efficiency. Slight variations from year to year or during short periods merely denote changes in total yearly agricultural production and farm employment.

To attribute all of the increased productivity only to farmworkers would be a misuse of this series. Over the years, farms and farmworkers have become specialized. Many jobs and functions have been transferred from farms to nonfarm business firms. The classic example of this is the transfer of production of farm-power from farms to tractor manufacturing firms, from horses and mules to mechanized farming. More recently, functions transferred have taken other forms, such as feed preparation and management and custom services. Many nonfarm workers now perform functions formerly done by farmworkers. This series does not quantify their contributions.

As functions are transferred from farmworkers to non-farmworkers, the number used directly in farm production declines. However, the number of non-farmworkers engaged in production of goods and services used by farmers increases relative to farmworkers. Thus the series overstates the contribution of farmworkers and ignores the growing importance of non-farmworkers in agricultural production.

The meaning of "persons supplied" has changed over time. In the 19th century and early in the 20th century farmworkers did many things both on the farm and in the farm home which later were done by city workers. Furthermore, agricultural products supplied consumers are now greater in quantity and higher in quality than they were in early years.

The series covers the 48 conterminous States. Four sets of data are used in computing the series:

(1) The farm employment series is the annual average number of farm operators, unpaid family workers, and hired workers reported by the Statistical Reporting Service (SRS), rounded to the nearest 100,000.

(2) The total U.S. population is that reported by the Bureau of the Census for July 1, rounded to the nearest 100,000. Data are adjusted to 1940 definitions, and from 1940 include persons in U.S. military forces in this country and abroad.

(3) The value of agricultural exports and imports is obtained from the Economic Research Service (ERS) and the Foreign Agricultural Service.

(4) Data on the value of domestic production are from ERS.

The total supply available for consumption in this country is represented by the current dollar value of farm production minus the value of agricultural exports plus the value of agricultural imports. This value of supply, divided by the total U.S. population, gives the per capita level of all agricultural products available for any given year.

The value of U.S. farm production available for domestic use divided by the per capita level of all agricultural products available gives the number of persons in the United States who could be supplied at this level of support with agricultural products from U.S. farm production only.

The value of agricultural exports divided by the U.S. per capita level of agricultural products available gives the number of persons abroad who could be supplied at the same level with agricultural products from our farm production.

The domestic and foreign population that could be supplied by U.S. farm products is divided by total farm employment to obtain numbers of consumers supplied farm products by one farmworker.

K 410–413. Man-hours of labor required on farms, 1910–1970.

Source: See source for series K 407–409.

These series are used to establish the amount of, and to measure changes in, labor input in agriculture by various enterprises. The series were developed for each year by farm production regions beginning with 1939, and for the United States, beginning 1910. They are of help in determining the effects of technological advances, such as mechanization and new hybrids or varieties of crops and animals, on the quantity of farm labor used. They serve as the labor component of an index of total production inputs in agriculture. (See R. A. Loomis and G. T. Barton, *Productivity of Agriculture, United States, 1870–1959*, U.S. Department of Agriculture, Technical Bulletin 1238, 1961.)

The figures are derived for individual farm enterprises by applying average man-hours per acre of crops and per head or unit of production of livestock to the official estimates of acres and numbers reported by the Statistical Reporting Service. The man-hours per acre for each crop are divided into preharvest and harvest work. The hours for preharvest work are applied to the acres planted. They include time for hauling and spreading fertilizer, plowing and disking the land, planting or seeding, cultivating, irrigating, and spraying and dusting for pest control. The hours for harvest work are applied to the acres harvested. They include time for the main harvesting operations and for hauling the crop to storage and to the local market or processing plant.

Man-hours needed for the care and production of livestock include direct labor for such operations as feeding, hauling feed and bedding, cleaning barns and pens, moving animals to or from pasture or range, caring for animals, and disposing of the animals and their products.

Time for farm maintenance or general overhead work is calculated separately and added to the direct labor for crops and livestock in arriving at total man-hours for all farmwork. Maintenance labor includes time spent in constructing and maintaining fences, buildings, and irrigation and drainage structures; in repairing machinery and farm power units; in conservation work that is not part of a regular field operation; in work on permanent pastures and farm woodlots; in conducting the farm business; in making business trips; and in other miscellaneous overhead tasks.

K 414–429. Indexes of total output, and gross production of livestock and crops, by groups, 1870–1970.

Source: U.S. Department of Agriculture, 1870–1900, Statistical Reporting Service, *Gross Farm Income and Indices of Farm Production and Prices in the United States, 1869–1937*, Technical Bulletin No.703, December 1940; 1910–1933, Economic Research Service, *Changes in Farm Production and Efficiency*, Statistical Bulletin No. 233, August 1958 and July 1964; 1929–1970 (except for series K 425, 1929–1949, and K 429 [1967 =100]), Council of Economic Advisers, *Economic Report of the President*, January 1972, p. 290 (data compiled by U.S. Department of Agriculture, Economic Research Service), and *Changes in Farm Production and Efficiency*, Statistical Bulletin No. 233, June 1972.

Series K 425, 1929–1949 (1967 = 100) and **series K 429**, compiled by Economic Research Service.

The index of farm output, series K 414, includes all crops produced during the crop year except hayseeds, pasture seeds, cover crop seeds, and hay and concentrates fed to horses and mules on farms. The index also includes "net" livestock production (gross livestock production minus hay and concentrates fed) other than horses and mules on a calendar-year basis. This calculation is made to eliminate counting of feed crops in both livestock and crop production. The farm output index is also available for each of the ten farm production regions from 1939 to 1970, and the U.S. data are available by decades from 1870 to 1910, and annually from 1910 to 1970. Although the indexes prior to 1910 are not strictly comparable with those for 1910–1970, they provide the best available measures for the early years.

The indexes for livestock production and crop production are measures of gross production, as they include items of production excluded in the index of farm output. They are subdivided into three livestock groups and nine crop groups. Meat animals, series K 416, includes cattle and calves, sheep and lambs, and hogs; dairy products, series K 417, includes butter, butterfat, wholesale milk, retail milk, and milk consumed on farms; and poultry and eggs, series K 418, includes chicken eggs, commercial broilers, chickens, and turkeys. Feed grains, series K 420, includes corn for grain, oats, barley, and sorghum grain; hay and forage, series K 421, includes all hay, sorghum forage, corn silage, and sorghum silage; food grains, series K 422, includes all wheat, rye, buckwheat, and rice; vegetables, series K 423, includes potatoes, sweetpotatoes, dry edible beans, dry field peas, truck crops for processing, and truck crops for fresh market having value; fruits and nuts, series K 424, includes fruits, berries, and tree nuts having value; sugar crops, series K 425, includes sugar beets, sugarcane for sugar and seed, sugarcane sirup, and maple sirup; cotton, series K 426, includes cotton lint and cottonseed; and oil crops, series K 428, includes soybeans, peanuts harvested for nuts, peanuts hogged, flaxseed, and tung nuts.

Weighted average prices per unit of each commodity are used in constructing these indexes. Separate sets of weights are calculated for each of the 10 farm production regions. Official reports of the Statistical Reporting Service are the chief sources of data on both production and prices. The omission of production from farm forests and other minor items probably accounts for less than 5 percent of the total output in recent years. Commodities of little importance are omitted in some regions for earlier years.

Three weight periods are used: 1935–39 prices for 1939 and prior years, 1947–49 prices for 1940 to 1954, and 1957–59 prices for the period beginning in 1955. The index series for the three subperiods are "spliced" together in 1939 and 1955 through the use of overlapped calculations for those years. Annual quantity-price aggregates for the United States are obtained by summing the regional data.

For more detail, see *Major Statistical Series of the United States Department of Agriculture*, Agriculture Handbook No. 365, vol. 2.

K 430–444. Indexes of farm output per man-hour, 1939–1970.

Source: U.S. Department of Agriculture, *Agricultural Statistics, 1972*, p. 540.

The index of farm labor productivity is the ratio of farm production to labor input. The index numbers are developed by relating the indexes of farm output and production of individual or groups of farm products to the appropriate index of labor input expressed in man-hours. The two basic series are explained in series K 414–429 and series K 445–485, respectively.

Indexes of farm labor productivity reflect the net effect of all factors that affect either farm production or the labor input. Labor is one of the more important inputs in agricultural production and changes in the ratio of production to labor provide a useful measure of changes in efficiency of farm production. These changes in production per man-hour must be evaluated in the light of changes in mechanization, yields of crops and livestock, and the other technological forces that operate on labor input and farm production.

K 445–485. Man-hours per unit and yield per unit of production of selected crops and livestock, 1800–1970.

Source: **Series K 445–472**, U.S. Department of Agriculture, 1800–1900, *Progress of Farm Mechanization*, Miscellaneous Publication No. 630, October 1947; 1910–14 to 1955–59, Economic Research Service, *Labor Used to Produce Field Crops*, Statistical Bulletin No. 346, May 1964, and unpublished data. **Series K 473–485**, U.S. Department of Agriculture, 1910–14 to 1945–49, *Gains in Productivity of Farm Labor*, Technical Bulletin No. 1020, December 1950; 1950–54 to 1955–59, *Labor Used to Produce Livestock*, Estimates by States, 1959, Statistical Bulletin No. 336, 1963. All series, U.S. Department of Agriculture, 1960–64 to 1965–69, *Agricultural Statistics, 1972*; 1970, unpublished data. (Before harvest and harvest data, unpublished compilations by Economic Research Service.)

For derivation of figures on man-hours of labor used in farming, see text for series K 410–413.

Estimates of annual man-hours per acre or per head are made by interpolating between or extrapolating from benchmarks. Benchmarks consist of estimates of labor used per acre and per head in each State converted to a farm production region basis. For livestock, interpolation of the labor hours between benchmarks takes into account changes in size of enterprise, such as cows per herd or chickens per flock; production per animal, such as milk per cow and eggs per hen; and extent of different methods and practices followed, such as proportion of farms with milking parlors.

State estimates for major benchmark years may be found in reports issued by the Bureau of Agricultural Economics and Agricultural Research Service, as well as the Economic Research Service.

For more detailed explanation, see *Major Statistical Series of the U.S. Department of Agriculture*, Agriculture Handbook, No. 365, vol. 2.

K 486–495. Indexes of total farm input and major input subgroups, 1910–1970.

Source: U.S. Department of Agriculture, 1910–1930, *Productivity of Agriculture*, Technical Bulletin No. 1238, April 1961; 1939–1970, *Changes in Farm Production and Efficiency*, Supplement V, Statistical Bulletin 233, July 1972.

The farm input index measures yearly changes in resources committed or used to produce farm output. It is also available for each of the 10 farm production regions from 1939 to 1970. Conceptually, the input series includes all inputs requiring annual cash expenditures, such as fertilizer, gasoline, and tires; in addition, it includes unpaid farm operator and family labor and a charge for the use of farmers' equity in capital investments.

The index is calculated by the weighted aggregate method. When possible, quantities of each input used during the year are multiplied by the weighted average prices paid by farmers in the weight period. When quantities are not available, current dollar values are deflated by appropriate indexes of prices paid. To compute the input index, the quantity-price aggregates are expressed as a percentage of average quantity-price aggregates in the reference period.

Three weight periods are used: 1935–39 for the years prior to 1939, 1947–49 for 1939 to 1954, and 1957–59 for 1955 and later years. The quantity-price aggregates are spliced at 1939 and 1955 to convert to one final series of index numbers. The 1967 quantity-price aggregate is used as the reference period. Annual quantity-price aggregates for the United States are obtained by summing the regional data for 1939 and later years. Only U.S. data were calculated for years prior to 1939.

In calculating total farm input, indexes for seven major groups of inputs, series K 489–495, are computed. In addition, inputs are divided into purchased and nonpurchased, series K 487 and K 488. The input index is revised following revision of the data from which it is derived. Most of these revisions are based on benchmarks established by the census of agriculture.

For more detail, see *Major Statistical Series of the United States Department of Agriculture*, Agriculture Handbook No. 365, vol. 2.

Series K 384-391. Index of Supply and Utilization of Farm Commodities as a Percentage of Total Annual Net Utilization: 1924 to 1970

[Domestic use estimated on the basis of value of processed products. "Net" concept excludes domestic use of feed and seed to avoid double counting]

Year	Percent of supply, by source			Percent of annual net utilization, by type of use				
				Domestic use				
	Net production	Net imports	Stock change [1]	Total	Food		Net nonfood use [3]	Exports and shipments
					Civilian	Military [2]		
	384	385	386	387	388	389	390	391

*Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] Farm, commercial, and government holdings; excludes live animal inventory. Negative sign indicates stock increases; positive figures denote withdrawals.
[2] Includes civilian feeding in occupied areas.
[3] Includes alcoholic beverages, soap, and industrial uses.

Series K 392–406. Value of Agricultural Raw Materials in Constant (1967) Dollars: 1900 to 1969

[In millions of dollars]

[1] Refers to persons supplied farm products; includes farmworkers.
[2] Man-equivalent hours; represents overhead and time used by average adult males in performing farm operations on crops and livestock.
[3] Includes work on horses and mules.

[1] Data for 1800 and 1840 are estimates by the authors. Data for 1880 and 1900 are 5-year averages of published data, centered on year shown. Data for 1970 are for single year.

[2] For statistical purposes, the bale of cotton is 500 pounds gross weight or 480 pounds net weight of lint. Prior to August 1, 1946, the net weight was estimated at 478 pounds. Running bales reported prior to 1899 have been converted to bales of 478 pounds net weight. Actual bale weights vary considerably.

[3] Production includes beef produced as a byproduct of the milk cow enterprise.

[4] Live-weight production.

Series K 486–495. Indexes of Total Farm Input and Major Input Subgroups: 1910 to 1970

[1967 = 100]

Year	Total input			Farm labor	Farm real estate	Mechanical power and machinery	Fertilizer and liming materials	Feed, seed, and livestock purchases [3]	Taxes and interest	Miscellaneous

[1] Includes operator and unpaid family labor, and operator-owned real estate and other capital inputs.

[2] Includes all inputs other than nonpurchased inputs.

[3] Nonfarm portion of feed, seed, and livestock purchases.

Chapter K

Crops and Livestock (Series K 496-623)

K 496–501. Acreages of harvested crops, by use, and indexes of cropland used for crops and crop production per acre, 1910–1970.

Source: U.S. Department of Agriculture. **Series K 496–499,** 1910–1949, Economic Research Service, *Changes in Farm Production and Efficiency,* Statistical Bulletin No. 233, July 1964; **series K 500–501,** 1910–1949, unpublished data. All series, 1950–1970, *Changes in Farm Production and Efficiency,* Statistical Bulletin No. 233, June 1971.

Acreages for harvested crops do not include pasture. The total crop acres harvested, series K 496, consists of acreages of the 59 crops harvested (excluding duplication) plus acreages in tree fruits, small fruits, tree nuts, and farm gardens. Acreages of several minor crops, which are not included, have accounted for about 0.5 million acres in recent years.

Acreages used for production of crop exports, series K 497, are determined by dividing the quantity exported by the average yield per acre. Two steps are necessary in computing the acreages of crops used to produce each of the livestock products exported. The first consists of estimating the quantities of each feed crop used to produce 100 pounds of pork, 100 pounds of milk, 100 dozen eggs, and so on. The second consists of determining the quantity of each feed crop used to produce the products exported, and then determining the acreages needed to produce each feed crop, at average yields per acre. Periodic 5-year average yields rather than yields for each year are used.

Yield data for the export estimates are from reports of the Crop Reporting Board. Data for volume of exports prior to 1940 are from *Agricultural Statistics.* For 1940–1970, export data are from reports and records of the Economic Research Service.

Estimates of feed consumed by horses and mules are based on the following average rations of corn, oats, and all hay: For 1910–1919, the calculations allow 800 pounds of oats, 1,600 pounds of shelled corn, and 1.8 tons of hay per head for farm horses and mules 3 years old and over and animal-unit equivalents for younger animals. For 1920–1940, it was assumed that as farm horses were worked less, they consumed less grain and more hay. Consequently, the rate of feeding corn was decreased 10 pounds per head per year and the rate of feeding hay was increased 20 pounds. Beginning with 1941, it was assumed that horses and mules would work less each year, and that on the average they would be fed less corn, oats, and hay and would consume more pasture.

For nonfarm horses and mules, it was assumed that, for 1910–1931, the quantities of grain and hay consumed per head per year were a third more than those consumed by farm work animals. Since 1932, the computations have rounded out to one million acres used in producing feed for nonfarm horses and mules.

Prior to 1960, basic data on horses and mules were from publications of the Economic Research Service. Estimates of horses and mules on farms were discontinued in 1960. The rations for horses and mules are based on data from many sources, especially from Bureau of Agricultural Economics, *Work Performed and Feed Utilized by Horses and Mules,* Farm Management 44, 1944, and on judgment of workers familiar with the subject.

The series on cropland used for crops, series K 500, is made up of three components—acres of harvested cropland (land from which one or more crops were harvested), crop failure, and summer fallow. The index excludes idle cropland and land in soil-improvement crops during the entire year and not harvested. These figures are based on estimates of principal crops harvested and crop losses prepared by the former Bureau of Agricultural Economics (BAE) and the Statistical Reporting Service (SRS) and on data from the 1925 to 1954 censuses of agriculture. Data from the 1950 to 1964 censuses of agriculture were adjusted to cover some of the underenumeration indicated by postenumeration surveys.

Acreages of crop failure were derived from the 1925 to 1945 censuses of agriculture, and interpolations for intervening years were based on BAE estimates of crop losses or differences between planted and harvested acreages of principal crops. Acreages of crop failure for recent years are based chiefly on crop losses as reported by SRS. Reported acreages of crop losses are adjusted for the replanting of part of the acreage on which winter wheat is abandoned. Hay land that produced nothing but pasture in some dry seasons is not included in crop failure in recent years.

Estimates of acreage of cultivated summer fallow were made only for the geographic divisions west of the Mississippi River.

Indexes of total crop production were divided by indexes of cropland used for crops to derive indexes of crop production per acre, series K 501. Indexes of crop production were developed as one step in the calculation of farm output; see series K 419–429.

For a more detailed explanation of these series, see *Major Statistical Series of the U.S. Department of Agriculture,* Agriculture Handbook No. 365, vol. 2.

K 502–563. General note.

For many crops, estimates of acreage, production, and prices begin in 1866, the year in which the Department of Agriculture began making regular reports. *Agricultural Statistics,* particularly the issues of 1941 and 1952, presents most of the available statistics, chiefly on a national basis, covering every phase, from acreage and production of individual commodities to utilization and consumption. *Crop Production* (Crop Reporting Board) presents monthly forecasts for the current season, beginning in March and carrying through the growing season. The December issue provides a summary for the current season, revisions for the previous season, and comparisons with previous years. These data appear also in *Crops and Markets.*

Census data shown are often not entirely comparable with the estimates shown, but furnish the benchmarks to establish the level of the estimates. For years before 1866, information from trade sources is available for some crops, such as cotton, tobacco, and rice.

Crop estimates are based chiefly upon reports from volunteer farmer-reporters who represent every part of every State. Check information is gathered from processors, from transportation and storage facilities, from buyers of farm products, from annual State farm enumerations, from various farm programs, and from other governmental agencies such as the Bureau of the Census, the Internal Revenue Service, and the Bureau of Customs.

Season average prices are averages of the midmonth prices weighted by the quantity sold each month in the crop-marketing season, which is the 12-month period following the harvesting of the crop. This season may vary for different crops, and for any crop it may vary by States. The season average price of any crop is the average of all the State prices, weighted by the production of each State. Thus, it may be applied to production in any given year to obtain a measure of the value of that production. State season average prices may be weighted by quantities sold in each State to obtain an average for the United States which may be applied to total quantities sold in the United States to measure value of sales in the crop season. In neither case, however, should the computed value be confused with calendar-year income from the crop. Monthly estimates of quantity sold

are based upon reports of receipts by the chief purchasers of the commodity—in the case of grains, the interior mills and elevators.

Midmonth prices received by farmers are estimated by the Crop Reporting Board and are based upon reports from thousands of firms dealing directly with farmers (such as elevators, truckers, processors, produce dealers, etc.) and from farmers themselves.

Season average prices for each State and the United States are summed up in the December issue of *Crop Values* and in *Field and Seed Crops Farm Production, Farm Disposition, and Value* issued each May. Data for season average prices begins for most commodities in 1908, but is supplemented for preceding years by the December 1 price series based on farmers' estimates on December 1 of average prices for the season's sales.

K 502–505. Corn acreage, production, price, and stocks, 1839–1970.

Source: **Series K 502–504**, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics: 1967* and *1972* editions; census years, U.S. Bureau of the Census, *U.S. Census of Agriculture: 1964*, vol. II, table 5, p. 313; and *1969*, vol. II, chapter 6. **Series K 505**, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics: 1952, 1957, 1962, 1967*, and *1972* editions.

Corn figures include not only the production of corn on the acreage harvested for grain, but also an allowance for that harvested for silage and for forage, including some harvested by grazing farm animals (commonly called hogging off). Beginning 1961, production figures represent corn harvested for grain only. Census figures for 1919 and previous years for both acreage and production represent corn harvested for grain only. For 1924–1969, census data for acreage represent corn harvested for all purposes, but those for production represent corn harvested for grain only.

The Crop Reporting Board has estimated farm stocks, series K 505, by States, quarterly since 1926 from reports of a large number of farmers. Farm stocks represent the farm carryover for crops of previous years, which become a part of the feed supply for the new season. In addition to farm stocks of corn, stocks in all off-farm positions have been estimated since 1943. Comparison with the farm-stocks data indicates that the bulk of carryover stocks of corn on October 1 of any year is still on farms.

U.S. Department of Agriculture data exclude Hawaii, census data include Hawaii; corn is not grown in Alaska.

See also general note for series K 502–563.

K 506–510. Wheat acreage, production, price, and stocks, 1839–1970.

Source: **Series K 506–507**, see source for series K 502–504. **Series K 508**, see source for series K 502–504 and, for census years, *U.S. Census of Agriculture: 1954*, vol. II, p. 633; *1964*, vol. II, table 5, p. 313; and *1969*, vol. II, chapter 6. **Series K 509**, see source for series K 505. **Series K 510**, 1926–1933, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1941* and *1946*; 1934, Agricultural Marketing Service, Statistical Bulletin No. 203, January 1957 (processed); 1935–1970, *Agricultural Statistics: 1957, 1962, 1967*, and *1972* editions.

Wheat figures are the combined estimates for winter, durum, and other spring wheat harvested for grain. The census data on acreage and production are regarded as comparable with the estimates in most cases. Wheat acreage harvested for hay is not included in these series.

Farm stocks of all wheat, by States, have been estimated quarterly since 1926 from reports of a large number of farmers. Farm stocks, series K 509, represent the farm carryover from previous crops at the beginning of a new crop year. The carryover added to the new crop is the supply for the new season.

U.S. Department of Agriculture data exclude Alaska, census data include Alaska; wheat is not grown in Hawaii.

See also general note for series K 502–563.

K 511–513. Oats acreage, production, and price, 1839–1970.

Source: See source for series K 502–504.

For 1866–1948, oats for grain figures include the acreage cut ripe and fed unthreshed; for 1949–1970, they include only the acreage and production combined or threshed. Estimates of harvested acreage exclude oats cut green for hay for all years, and oats cut ripe and fed unthreshed, 1949–1970. Census data are comparable only with the estimates beginning in 1949.

See also general note for series K 502–563.

K 514–516. Barley acreage, production, and price, 1839–1970.

Source: See source for series K 502–504.

The annual estimates of barley acreage and production and the census data are on a comparable basis. Barley cut for hay is excluded. Figures on farm stocks are available from 1933–1970, and stocks in off-farm positions have been estimated since 1943.

See also general note for series K 502–563.

K 517–519. Flaxseed acreage, production, and price, 1849–1970.

Source: **Series K 518**, 1866–1888, U.S. Department of Agriculture, Agricultural Marketing Service, *Revised Estimates of Flaxseed Production, 1866–1929*, July 1936 (processed). **Series K 517–519**, 1889–1970, Statistical Reporting Service, *Agricultural Statistics, 1941, 1942, 1952, 1957, 1962, 1967*, and *1971* editions; and for census years, see census source cited for series K 502–504.

Annual estimates and census data are on a comparable basis. Flax grown for fiber is not included in the acreage estimates; flaxseed deseeded from fiber flax is not included in the production estimates. Estimates of fiber flax are available in publications of the Crop Reporting Board. Farm-stocks data and stocks in off-farm positions, 1947–1970, are also available from the same source.

See also general note for series K 502–563.

K 520–522. Soybeans acreage, production, and price, 1909–1970.

Source: See source for series K 502–504.

Price figures are season average prices prepared by weighting the midmonth prices received by farmers. Figures for acreage grown for all purposes, alone and interplanted, and acreage and production of soybeans for hay are also estimated by the Crop Reporting Board. Data on farm stocks and stocks in off-farm positions, 1942–1970, are also available in publications of the same agency.

See also general note for series K 502–563.

K 523–525. Sorghum grain acreage, production, and price, 1919–1970.

Source: U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1937, 1972*, and *1973* editions.

Sorghum grain includes both grain sorghums for grain, and sweet sorghums for grain or seed. Price is based on the reported price of grain sorghums. It is obtained by weighting State prices by quantity sold and includes allowance for unredeemed loans and purchases by the Government valued at the average loan and purchase rate, by States.

See also general note for series K 502–563.

K 526–528. Rye acreage, production, and price, 1839–1970.

See general note for series K 502–563.

K 532–537. Irish potatoes and sweetpotatoes acreage, production, and price, 1849–1970.

Source: **Series K 532**, U.S. Department of Agriculture, 1866–1918, Agricultural Marketing Service, Statistical Bulletin No. 122, March 1933. **Series K 533** and **series K 536**, 1866–1918, U.S. Department of Agriculture, Crop Reporting Board, unpublished data. **Series K 534**, 1866–1908, see source for series K 533; 1909–1918, U.S. Department of Agriculture, Agricultural Marketing Service, *Agricultural Prices*, February 1957. **Series K 535**, 1868–1918, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1941*. **Series K 537**, 1866–1908, see source for series K 533; 1909–1918, U.S. Department of Agriculture, Agricultural Marketing Service, *Agricultural Prices*, January 1957. For all series, 1919–1970, Statistical Reporting Service, *Agricultural Statistics, 1957, 1962*, and *1972* issues. Census years, U.S. Bureau of the Census, *U.S. Census of Agriculture: 1964*, vol. II, table 5, p. 313; and *1969*, vol. II, chapter 6, tables 46 and 47.

Estimates of potatoes and sweetpotatoes relate to the total crop harvested and include quantities used on farms where grown, and losses from shrinkage, cullage, and dumping after harvest. The potato crop is divided into six seasonal groups: Winter, early spring, late spring, early summer, late summer, and fall. The seasonal estimates are based on the usual time of harvest. The schedule of estimates and the classification of States are shown in Agriculture Handbook No. 127, June 1967.

In censuses prior to 1950, the acreage of sweetpotatoes was to be reported in all cases, even when the quantity harvested was small. Therefore, acres harvested for censuses prior to 1950 are not fully comparable with those of the last four censuses.

K 550–552. Hay acreage, production, and price, 1839–1970.

Source: See source for series K 502–504.

Census data are comparable to annual estimates in the series in which they are included. Figures for stocks of hay are published in U.S. Department of Agriculture, Statistical Reporting Service, *Crop Production*.

See also general note for series K 502–563.

K 553–558. Cotton and cottonseed acreage, production, price, and stocks, 1790–1970.

Source: **Series K 553**, see source for series K 502–504. **Series K 554**, 1790–1865, U.S. Department of Agriculture, Bureau of Statistics, Circular 32, August 1912; 1866–1970, see source for series K 502–504. **Series K 555** and **series K 557**, see source for series K 502–504. **Series K 556**, 1906–1970, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1941, 1952, 1956, 1957, 1967*, and *1971* editions. **Series K 558**, 1909–1918, U.S. Department of Agriculture, Agricultural Marketing Service, Statistical Bulletin No. 164, June 1955 (processed); 1919–1970, *Agricultural Statistics, 1957, 1962*, and *1972*.

Cotton production estimates are defined by statute as cotton actually ginned. For 1913–1924, annual ginnings as published by the Bureau of the Census included some cotton produced in lower California and Mexico and ginned in California; however, it is not included in U.S. production for those years. For those years, also, cotton ginned in the United States exceeds production by the quantity of the cross-border movement of seed cotton into this country. For all other years, beginning in 1899, production of cotton is the quantity of census ginnings by States adjusted for cross-State movement of seed cotton and rounded to thousands of bales. U.S. production is obtained by adding rounded State estimates and therefore differs slightly from the Census Bureau report on ginnings.

Before 1899, production figures were compiled from various current sources including exports and imports, rail and water shipments, mill receipts, etc., together with the decennial enumerations of the Bureau of the Census. These production estimates are the same as those in Department of Agriculture, Bureau of Statistics, Circular 32, cited above, except for minor adjustments caused by rounding State estimates.

Figures for stocks, series K 556, are in running bales, except that any small quantity of foreign cotton which is included is in equivalent 500-pound gross-weight bales. Before 1914, stocks are as of September 1. Data for 1906–1922 are from the New York Cotton Exchange Service; those for 1923–1970 were compiled by the Bureau of the Census.

Cottonseed production, series K 557, for 1866–1927 was computed from net lint production using a uniform ratio of 65 pounds of cottonseed for each 35 pounds of net lint. Beginning in 1928, ratios were estimated from data collected from cotton ginners.

The season average prices from 1908 to 1970 for both cotton and cottonseed, series K 555 and series K 558, are the weighted averages of midmonth prices. Prior to 1909, cottonseed prices are not available; prior to 1908, cotton prices were based on farmers' estimates on December 1 of average prices for the season.

The crop-marketing season for both cotton and cottonseed begins August 1 for all States except Texas where it begins about mid-July.

See also general note for series K 502–563.

K 559–560. Shorn wool production and price, 1869–1970.

Source: U.S. Department of Agriculture, **series K 559**, 1869–1908, *Agriculture Yearbook, 1923;* **series K 560**, 1869–1908, *Gross Farm Income and Indices of Farm Production and Prices in the United States, 1869–1937*, Technical Bulletin No. 703, December 1940; **series K 559–560**, 1909–1939, *Livestock and Meat Statistics*, Statistical Bulletin No. 230, July 1958; 1940–1970, Statistical Reporting Service, *Agricultural Statistics, 1967* and *1972* editions.

The original source of data for 1869–1908 was the National Association of Wool Manufacturers. Estimates have been made by the Department of Agriculture since 1909. Wool production is estimated by ascertaining the number of sheep and lambs shorn and the average weight per fleece, and using data from the censuses of agriculture as periodic benchmarks. Extensive revision of production estimates back through 1909 were made in 1936. The figures for 1869–1908 are not comparable to these revised estimates. To illustrate the lack of comparability, the unrevised production estimate of 287 million pounds for 1909, published in the *Agriculture Yearbook* for 1923, may be compared with the revised estimate of 310 million pounds.

K 561–563. Tobacco acreage, production, and price, 1866–1970.

Source: See source for series K 502–504.

Consumer and Marketing Service publications also present estimates of stocks of tobacco, 1929–1970, and of acreage and production of tobacco, by types, 1919–1970.

See also general note for series K 502–563.

K 564–574. Livestock on farms and value per head, and number of workstock, 1867–1970.

Source: Annual data, U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1957, 1962, 1967,* and subsequent annual editions. Census years, U.S. Bureau of the Census, *U.S. Census of Agriculture: 1959,* vol. III, chapter 6; *1964,* vol. II, chapter 2; and *1969,* vol. II, chapter 5.

These estimates have been made by the Department of Agriculture since 1867. The early estimates were based on reports of the percentage change in numbers from the previous year by field agents and crop reporters. At 10-year intervals, the census of agriculture furnished the basic figures to which these percentage changes were applied. Beginning 1920, a national agriculture census has been taken every 5 years. Since 1920, the Department of Agriculture annual estimates are based primarily on survey returns from livestock producers who reported on the number of livestock, by classes, on their own farms about December 1 each year. Records of livestock assessed for taxation in the various States have furnished indications of the annual percentage change in numbers, and records of marketings and slaughter have been used both by States and for the United States as check information.

Data from the census of agriculture have been used as periodic benchmarks for the January 1 estimates but there are few census years when the Department of Agriculture estimates and the census data are in close agreement. One of the main reasons for these differences is that there are only a few times when the census was taken as of January 1. In years when the census relates to a different date, adjustments are made to determine a January 1 equivalent number. In the midthirties, the Department of Agriculture undertook a general revision of all estimates prior to 1920 to correct for irregularities in the early series and to utilize more fully the records of numbers assessed for taxation and other information not considered in preparing the original estimates.

Prior to 1920, crop reporters provided a single estimate of the value per head for a given species. Since 1920, the estimates are weighted averages based on values per head reported separately for the different age and sex classes of a given species, using as weights the estimated number in the respective class.

K 575, 578, 580. Live weight production of livestock, 1909–1970.

Source: U.S. Department of Agriculture, 1909–1923, Bureau of Agricultural Economics, *Meat Animals, Farm Production, and Income, 1924–1944,* September 1947; 1924–1970, Statistical Reporting Service, *Agricultural Statistics, 1952, 1957, 1962, 1967,* and *1971* editions.

Production in live weight relates to the total poundage produced on farms and ranches during a calendar year. The estimate of production is derived by determining for each State a balance sheet which shows, as debit items, the inventory at the beginning of the year, the births, and inshipments; and, as credit items, the marketings, farm slaughter, death losses, and numbers on hand at the end of the year. Estimates of average live weight are based on reports from slaughterers, collected by the Department of Agriculture and in the census of manufactures, and on records obtained from stockyards. Reports have also been obtained from farmers on the average weight of livestock slaughtered on farms. The total live weight for beginning and end of year is obtained by multiplying estimates of the different age and sex classes for a species by an estimate of their respective average live weight. Live weight of marketings, farm slaughter, and inshipments is determined by multiplying the estimate for these items by the respective average live weight. To obtain production, the total weight of inshipments is subtracted from the combined weight of marketings and farm slaughter. Then the difference in the inventory weight between the beginning and end of year is added or subtracted as the case might be.

K 576, 577, 579, 581, 582. Annual average price received by farmers, per hundred pounds of livestock, 1909–1970.

Source: 1909–1923, U.S. Department of Agriculture, Agricultural Marketing Service, *Prices Received by Farmers, 1908–1955,* Statistical Bulletin No. 180, June 1956; 1924–1970, see source for series K 575, 578, 580.

Price information is obtained from voluntary price reporters who furnish average local market prices each month. The estimates of monthly prices are weighted by monthly estimates of marketings to obtain the annual average. The monthly marketings are based on reports from stockyards and packers on monthly receipts of livestock by State of origin.

K 583–594. Meat slaughtering, production, and price, 1899–1970.

Source: U.S. Department of Agriculture. 1899–1939, Production and Marketing Administration, *Livestock Market News, Statistics and Related Data, 1946,* September 1947; 1940–1970, Economic Research Service, *Livestock and Meat Statistics,* annual issues, and Statistical Reporting Service, *Agricultural Statistics,* annual issues.

Figures for slaughter include federally inspected slaughter and estimates of all other slaughter (other commercial slaughter and farm slaughter). Before 1944, this information was obtained largely on an annual basis from various sources; but, beginning in 1944, information was collected by months, first under the slaughter control program of the War Food Administration, and later under the slaughter and meat control programs of Office of Price Administration. Current data on federally inspected slaughter, which includes animals condemned as unfit for human food, are compiled by the Consumer and Marketing Service in connection with its regulatory functions on meat inspection. The number of animals slaughtered in other commercial channels is estimated by the Statistical Reporting Service from monthly reports made by slaughterers who are not under Federal inspection. Estimates of farm slaughter are based on annual voluntary reports from livestock producers with periodic data from the census of agriculture as benchmarks. Production of the different kinds of meat are computed from estimated average live weights and dressing yields and, except for pork, is shown on a carcass weight basis. Pork production represents carcass weight excluding the raw fat rendered into lard.

The data on production under Federal inspection are based on records of production and yields reported monthly by slaughterers operating under Federal inspection. Monthly estimates of production under Federal inspection are not available prior to 1921. Reports of the biennial census of manufactures on slaughter were used as a basis for annual production estimates for years for which they are available. In other years, the estimates were based on information obtained from market records and other sources. Currently, information on weights and yields for other commercial slaughter is

based on monthly reports from commercial slaughterers who are not under Federal inspection.

Prices of the different species of livestock at Chicago for the early years are from records published in the *Drovers Journal Yearbook*. Beginning in 1922, the price of beef steers at Chicago is based on records of all steers sold out of first hands for slaughter. The number of head, live weight, and total value of steers, by grades, are compiled by weeks. The annual prices represent the weighted average of all grades of steers sold during the year for slaughter. Since 1919, the average price for veal calves is based on the average of daily quotations. The average price of hogs at Chicago has been obtained from different sources; since 1920, it is the weighted average of packer and shipper purchases at the Chicago market. Since 1921, the price of lambs at Chicago represents an average computed from the bulk of sales price data.

K 595–608. General note.

Early development of the dairy industry in the United States is indicated by export statistics of 1790 which showed the New England States, New York, and Pennsylvania producing considerable amounts of butter and cheese in excess of their consumption requirements. The growth and spread of the industry between that time and 1849, when statistics on dairying were first available through the national census of agriculture, are described in the *Agriculture Yearbook*, 1922, pp. 297–306. At the middle of the 19th century, milk cows were rather generally distributed over the eastern half of the United States as far west as southern Wisconsin, eastern Iowa, western Missouri and Arkansas, and the eastern third of Texas. By 1860, there were appreciable numbers of milk cows in the Pacific Coast States. In later years, they gradually spread over the intervening territory.

Dairy products sold by farmers in the early period were limited mainly to whole milk, farm-made butter, and farm-made cheese. Prior to 1850, these products were produced mainly on farms. The 1850 Census showed the bulk of cheese production for 1849 coming from farms in the area extending from northeastern Ohio eastward through New York and New England. Factory cheese production was in an experimental stage shortly before 1850, and made considerable progress during the next two decades. Although some butter was made in early cheese plants, the first commercial creamery was not established until 1861. Since that time, factories have largely supplanted farms in the production of both cheese and butter.

The first condensery was established in 1856, but little interest was given the product until the Civil War. Unsweetened condensed milk was first produced in 1885; the canned unsweetened product (evaporated milk) now makes up about nine-tenths of all evaporated and condensed whole milk. Ice cream was produced and sold by some retail stores in the first half of the 19th century, and wholesale plant distribution to dealers began about the middle of the century.

K 595–596. Cows and heifers kept for milk, 1850–1970.

Source: U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1967* and *1972* editions. Census years, U.S. Bureau of the Census, 1850–1920, Sixteenth Census Reports, *Agriculture*, vol. III, pp. 606–607; 1925–1945, *Census of Agriculture, 1945*, vol. II, p. 381; 1950–1954, *U.S. Census of Agriculture: 1954*, vol. II, p. 440; 1959–1964, *U.S. Census of Agriculture: 1964*, vol. II, p. 58; 1969, *U.S. Census of Agriculture:* 1969, vol. II, chapter 5, p. 146.

The estimates are based on interpretation of data from the census of agriculture, tax assessors, and other State agencies, together with the analysis of changes taking place in herds kept by a large sample of livestock reporters. With respect to the data on milk cow numbers obtained in the censuses of agriculture, the wording of the census questions has not necessarily been comparable with the definitions represented by the annual estimates and has varied somewhat from one census enumeration to another.

K 597. Milk production on farms, 1889–1970.

Source: 1889–1919, U.S. Bureau of the Census, various census of agriculture reports. U.S. Department of Agriculture, 1924–1944, Agricultural Marketing Service, *Milk-Farm Production, Disposition, and Income*, Statistical Bulletin No. 175, April 1956; 1945–1970, Statistical Reporting Service, *Agricultural Statistics, 1967* and *1972* editions.

Beginning in 1924, the figures represent calendar-year estimates. The estimates are based on interpretations of census data, analysis of annual and monthly survey data on milk cows and milk production, and checks against information on milk utilization obtained from dairy plants and other sources. For 1919 and earlier years, the data are based on censuses of agriculture and converted from gallons to pounds by use of a conversion factor of 8.6 pounds per gallon. For 1889, the census totals are the reported figures. For 1899, they include estimates for incomplete reports; and for 1909 and 1919, they include estimates of production on farms that reported milk cows but failed to report milk produced. The 1889 and 1899 data were enumerated as of the following June, the 1909 data as of April 15, 1910, and the 1919 data as of January 1, 1920.

K 598–601. Production of dairy products, 1849–1970.

Source: 1849–1916, E. E. Vial, *Production and Consumption of Manufactured Dairy Products*, U.S. Department of Agriculture, Technical Bulletin No. 722, April 1940. U.S. Department of Agriculture, Agricultural Marketing Service, 1917–1939, *Revisions in the Production of Creamery Butter, Cheese, and Ice Cream by States, 1916–1939*, and *Production and Utilization of Milk, United States, 1924–1952;* 1940–1949, *Production of Manufactured Dairy Products* (except for series K 601, 1940–1949, *Revisions of Ice Cream and Ice Milk Data, by States, 1940–1949);* 1950–1970, *Agricultural Statistics, 1964*, and subsequent annual issues except series K 598, 1970, unpublished data.

For 1940–1970, data are from the annual survey of output of dairy plants. For 1916–1939, data were based on the annual survey of dairy plants supplemented by estimates for incompleteness in some States based on data from the census of manufactures or from State sources. For the years prior to 1916 or 1917, the level of the figures was based mainly on the Census Bureau's survey of the output of dairy plants with interpolations for intervening years for some products (see E. E. Vial, cited above).

Butter production data represent farm and factory production combined. Factory butter figures for 1917–1970 are for production of creamery butter and include some estimates for incompleteness. Figures for factory production for 1849, 1859, 1869, 1879, 1899, 1904, 1909, and 1914 are from the census of manufactures. The 1889 census data were revised upward to allow for incompleteness. Annual figures on factory butter production for the intercensal years were interpolated on the basis of receipts of butter at major central markets for 1879–1919 and on factory production for 1917–1970.

Cheese production figures include both farm and factory cheese production prior to 1927. Since 1926, farm cheese was negligible and is excluded. For 1909–1917, cheese figures exclude full-skim American. For 1918–1970, data are from plant reports of all types of cheese manufactured except cottage, pot, and bakers' cheese and full-skim American. For 1849, 1859, 1869, 1879, 1889, and 1909 the figures for total cheese production are from the decennial censuses. The census data for 1889 were revised upward to allow for incompleteness. Estimates for the intercensal years 1869–1899 were interpolated on the basis of market receipts. Data on factory production of cheese for 1904 and 1914 are from the census of manufactures; data for the intercensal years 1869–1919 were interpolated on the basis of market receipts. Production of farm cheese for the intercensal years 1899–1926 was roughly projected on the basis of average change between census years and added to the factory product to obtain total cheese figures.

Evaporated and condensed milk production includes evaporated whole milk, bulk unsweetened condensed whole milk, and case and

bulk sweetened condensed whole milk. Production figures for 1879, 1899, 1904, 1909, and 1914 are census totals for all condensed and evaporated milk. For 1889, the census data were revised upward to allow for incompleteness. Data for 1869 are estimated; those for the noncensus years before 1919 represent an estimated trend of production based on intervening census data.

Ice cream production figures for 1916–1970 are based on the annual survey of dairy manufacturing plants supplemented by estimates for incompleteness in some States based on data from the census of manufactures or State sources. For 1914, data were estimated from the census of manufactures. For 1909 and earlier years, the data represent merely an estimated trend of production.

K 602. Milk equivalent of manufactured dairy products, 1849–1970.

Source: See source for series K 598–601, except 1970, unpublished data.

For 1849–1923, the figures are based on national production of manufactured dairy products converted to milk equivalent on the basis of somewhat less refined conversion factors than those used for later years. As such they include no allowance for shifts in production between States or areas of high- or low-testing milk, and they assume standard butterfat content of the products for all years.

For 1930–1970, data were based on information of products made in each State and State conversion factors for each product. Duplication of milk usage involving the production of butter from whey fat recovered from cheese making and the use of butter and condensed milk in the production of ice cream were eliminated.

K 603–606. Dairy products—prices received by farmers, 1909–1970.

Source: U.S. Department of Agriculture. 1909–1944, Agricultural Marketing Service, *Prices Received by Farmers*, Statistical Bulletin No. 180, June 1956; 1945–1970, Statistical Reporting Service, *Agricultural Statistics, 1967* and *1972* issues.

Prices received by farmers for milkfat in cream, wholesale milk, and retail milk are estimates based on averages of survey data reported by dealers and farmers for their local market areas. Prices of milkfat in cream, series K 604, represent the butterfat in farm-skimmed cream sold by farmers; survey information was not collected prior to 1920, and estimates were extrapolated on the basis of trends in butter prices.

Wholesale milk prices, series K 605, are for milk sold by farmers to plants and dealers including such establishments as cheese factories, condenseries, creameries, or market milk plants. Prior to 1923, these prices were asked on a per-gallon basis and since that time on a per-100-pounds basis. Additional historic information on wholesale milk-price series was collected by direct plant contacts during the middle 1930's when the State estimates were revised.

Retail milk prices, series K 606, represent the milk retailed by farmers directly to consumers. Before 1923, survey information was collected on a price per-gallon rather than per-quart basis. Some of the increase in price between 1909 and 1945 probably represents additional services rendered in process of distributing the milk.

K 607–608. Cheese and butter—wholesale prices, 1830–1970.

Source: U.S. Department of Agriculture, Consumer and Marketing Service, unpublished data and Statistical Reporting Service, *Agricultural Statistics*, annual editions.

The wholesale prices of cheese represent averages of weekly quotations prior to 1950 on American twins and thereafter on cheddar cheese only, on the Wisconsin cheese exchange at Plymouth. The wholesale price of butter is for the New York City market. Since 1830, the data for butter differ somewhat in definition and source (see tabular footnote).

K 609–623. Poultry and eggs—number, production, and price, 1909–1970.

Source: U.S. Department of Agriculture, Statistical Reporting Service, *Agricultural Statistics, 1957, 1962, 1967, 1971, 1972*, and *1973* editions, except series K 611–613, 1909–1929, and series K 617–618, 1909–1919, Bureau of Agricultural Economics, *Farm Production, Disposition, and Income From Chickens and Eggs*, Statistical Bulletin No. 133, July 1953. Census years, for chickens: 1910, U.S. Bureau of the Census, *U.S. Census of Agriculture, 1940*, Special Poultry Report, p. 4, and *1945*, vol. II, p. 407; 1920–1964, *U.S. Census of Agriculture: 1964*, vol. II, chapter 2, table 5; 1969, *U.S. Census of Agriculture: 1969*, vol. II, chapter 5, table 20. Census data for turkeys: *U.S. Census of Agriculture, 1954*, vol. II, p. 556.

In census data, age limitations for chickens and turkeys are: 3 months old and over for the 1910, 1930, 1935, and 1969 censuses; no age limitation for the 1920 and 1925 censuses; and 4 months old and over for the 1940, 1945, 1950, 1954, 1959, and 1964 censuses. Broilers are young chickens of the heavy breeds and other meat-type birds, to be marketed at 2–5 pounds live weight, and from which no pullets are kept for egg production. These data are not included in farm production of chickens.

The estimates are believed to indicate, within reasonable limits of accuracy, the actual number of farm chickens and turkeys; the production of chickens, turkeys, and eggs; and, with greater accuracy, the direction and extent of the changes from year to year.

Complete surveys of the hatchery industry are made every year in all States. Monthly estimates of the production of baby chicks, based on returns from about 70 percent of total hatchery capacity, are also made. These figures of hatchery output give a dependable check on the actual level of chicken production.

Estimates of inventory numbers of chickens on farms January 1, series K 609, are based primarily upon census enumerations. Enumerations for 1910–1955 were adjusted for changes between January 1 and the average date of enumeration in each State, and cover only farm flocks as defined by the Census Bureau. Estimates of change in numbers from year to year through 1967 were based on annual surveys made in December of each year, covering about 150,000 livestock farms, and on changes in flocks belonging to about 30,000 crop reporters, plus assessor and State farm census data where available. Since 1967, estimates of change in numbers from year to year are based on annual surveys in December of each year covering about 40,000 flock owners (contractors and independents) which account for nearly half of all birds in the country.

Although census enumerations of chickens on farms were made in 1880, 1890, and 1900, the Department of Agriculture did not make annual estimates until 1909 because data showing annual changes were not available.

Estimates of inventory numbers of turkeys on farms January 1, series K 619, are based primarily upon the census enumerations of turkeys on farms January 1, 1935, and April 1, 1940, adjusted for changes in numbers between January 1 and the date of enumeration. Turkeys on farms were not reported in the 1945 census. The number on January 1, 1945, was estimated from the relationship between turkeys raised in 1944 and the number on hand January 1, 1945, as reported by crop and livestock reporters, using as a base the revised estimates of turkeys raised in 1944 based on the census enumeration. Annual changes in the estimates for intervening years are based mainly on the numbers on hand as reported on January 1 by crop and livestock reporters. Estimates of turkeys raised from 1954–1970 are based on poultry placement data secured from hatcheries. In recent years coverage has been virtually complete. Although census enumerations of turkeys on farms were made in 1890, 1900, 1910, and 1920, the Department of Agriculture did not make annual estimates for years prior to 1929 because data showing annual changes were not available.

Chickens, series K 611, and turkeys, series K 621, produced on farms are computed from the number raised during the year, minus the death loss of chickens and of turkeys that were on hand at the

beginning of the year. Young chickens and young turkeys of the current year's hatchings that die are also excluded.

Egg production, series K 617, is estimated from returns from about 30,000 crop respondents and 5,000 commercial egg producers (contractors and independents) reporting on the first of each month for their own flocks, the number of layers on hand, and the eggs produced yesterday. Beginning with the estimated total number of layers on hand at the beginning of the year, the change in numbers from month to month is estimated from the changes shown by these survey operations. The monthly average number of layers and total egg production is revised at the end of the year if the change in number of layers shown by the annual survey in December differs from the change estimated from monthly returns. Adjustment is also made for change in the number of chicken farms on an annual basis.

More Recent Data for *Historical Statistics* Series

Statistics for more recent years in continuation of many of the still-active series shown here appear in annual issues of the *Statistical Abstract of the United States*, beginning with the 1975 edition. For direct linkage of the historical series to the tables in the *Abstract*, see Appendix I in the *Abstract*.

[1] December 1 price received by farmers prior to 1908; season average price thereafter.
[2] Corn harvested for grain only.
[3] Not comparable with previous censuses; data for farms with farm product sales of $2,500 or more.
[4] Beginning 1959, census data include Alaska and Hawaii.

[1] December 1 price, 1895–1907; season average price thereafter.
[2] Prices do not include Government payments under the Sugar Act.
[3] Net weight basis.
[4] Obtained by weighting State prices by quantity sold.
[5] Not comparable with previous censuses; data for farms with farm products sales of $2,500 or more.
[6] Beginning 1959, census data include Alaska and Hawaii.
[7] Beginning 1959, annual data include Hawaii.
[8] Includes average support payments: 1945, $1.50; 1944, $.83; 1943, $.34.

Series K 550–563. Hay, Cotton, Cottonseed, Shorn Wool, and Tobacco—Acreage, Production, and Price: 1790 to 1970

[1] All hay, 1909–1970; tame hay prior to 1909.
[2] December 1 average price prior to 1909; season average price thereafter. Loose hay price 1909–1938; baled hay price thereafter.
[3] Annual production estimates prior to 1962 are shown in 500-pound gross-weight bales; beginning 1962, 480-pound net-weight bales. Figures for census years are shown in running bales, and are not comparable with annual production estimates; the net weight per running bale was 383 pounds in 1839; 496.1 pounds in 1944; 482.0 pounds in 1954; 501.1 pounds in 1964; and 503.6 pounds in 1969.
[4] Includes shearing at commercial feeding yards.
[5] Average price relates to calendar year prior to 1943, April-March marketing season for 1943–1962, April-December for 1963, and calendar year thereafter.
[6] December 1 price prior to 1919; season average price thereafter.
[7] Average price to December 1, 1969, with no allowance for unredeemed loans.
[8] Includes allowance for unredeemed loans.
[9] Beginning 1961, includes Alaska; no estimates made for Hawaii.
[10] Beginning 1953, price includes allowance for unredeemed wool.
[11] Includes 26.5 million pounds that were not utilized due to Agricultural Adjustment Act.

Series K 564-582. Livestock—Number, Value Per Head, Production, and Price: 1867 to 1970

[Census figures in *italics*. All figures are as of January 1 except for 1870, 1880, 1890, 1900 (June 1); 1910 (April 15); 1930, 1940, 1950 (April 1); 1954, 1959 (October-November); 1964 (November-December); and 1969 (December 31)]

* Denotes first year for which figures include Alaska and Hawaii.
[1] Includes colts. Beginning 1951, horses and mules combined.
[2] Includes adjustment for livestock shipped in and inventory changes.
[3] December 1, preceding year.
[4] Horses and ponies.
[5] Excludes spring-born calves, pigs, lambs, and colts.
[6] Over 27 months old.
[7] Government purchases included in figures for all cattle, 1935 and 1934; for hogs, 1933.
[8] Includes Government purchases.
[9] Excludes spring-born colts.

Series K 583–594. Meat Slaughtering, Production, and Price: 1899 to 1970

[Prices are those at Chicago. Average price of all grades]

Year	Beef			Veal			Pork			Lamb and mutton		
	Cattle slaughtered [1]	Production, dressed weight	Price of beef steers per cwt.	Calves slaughtered [1]	Production, dressed weight	Price of veal calves per cwt.	Hogs slaughtered [1]	Production, dressed weight	Price of hogs per cwt. [2]	Lambs and sheep slaughtered [1]	Production, dressed weight	Price of lambs per cwt.

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available. Z Less than 500,000 gallons.
[1] Farm and factory production combined.
[2] Includes all types of cheese except cottage, pot, and bakers' cheese; full-skim American cheese excluded since 1908. Farm output not estimated since 1926.
[3] For 1919–1970 includes all evaporated and condensed whole milk as compiled by the former Bureau of Agricultural Economics and Agricultural Marketing Service. Prior to 1919, includes total production of all condensed and evaporated milk as interpolated from census enumerations.
[4] For 1849–1923, computed from data on estimated production of manufactured dairy products, using average milk equivalent factors; 1924–1970, as published by Agricultural Marketing Service. Data include farm butter.
[5] On Wisconsin cheese exchange, based on weekly prices established on Friday each week. Beginning 1950, data for cheddar cheese only.
[6] Annual averages of monthly figures from sources and for grades as follows: 1830–1879, average of high and low for 2 days each week, high grade, New York shipping and commercial list; 1880–1895 average of monthly range, creamery extras, annual reports of New York Chamber of Commerce; 1896–1920, average of daily quotations for extra fresh, specials, extras and firsts, or fresh extras, *New York Produce Review and American Creamery*, published by Urner-Barry Company; 1921–1970, 92 score creamery, daily market reports of U.S. Department of Agriculture.
[7] Beginning 1959, census figures include Alaska and Hawaii.
[8] September figure shown because annual averages were not available.

Series K 609-623. Poultry and Eggs—Number, Production, and Price: 1909 to 1970

[Census figures in *italics* and as of April 15, 1910; April 1, 1930, 1940, 1950, and 1954; January 1, 1920, 1925, 1935, and 1945; October-November, 1959; November-December, 1964; and December 31, 1969]

Chapter L

Forestry and Fisheries

Forests and Forest Products (Series L 1-223)

L 1–223. General note.

Since 1900, several reports containing basic forest statistics have been published and the seven most noteworthy for inclusion of new data are listed below.

U.S. Forest Service, *Timber Depletion, Lumber Prices, Lumber Exports, and Concentration of Timber Ownership,* Report on Res. 311, 66th Congress, 2d session (The Capper Report), 1920; *A National Plan for American Forestry,* Senate Document 12, 73d Congress, 1st session, 2 vols. (The Copeland Report), 1933.

U.S. Congress Joint Committee on Forestry, *Forest Lands in the United States,* Senate Document *32,* 77th Congress, 1st session (The J.C.C. Report), 1938.

U.S. Forest Service, *Forests and National Prosperity,* Agriculture Miscellaneous Publication No. 668 (The Reappraisal Report), 1948; *Timber Resources for America's Future,* 1958; *Timber Trends in the United States* (Forest Resource Report No. 17), 1965; *The Outlook for Tzmber in the United States* (Forest Resource Report No. 20), 1973.

All series from the Forest Service include Alaska and Puerto Rico for all years; there are no national forest areas in Hawaii.

L 1–9. Forest land—total and commercial timber area, net **volume of** sawtimber, and **net** volume **of** growing **stock, 1953,1963,** and **1970.**

Source: U.S. Forest Service, 1953, *Timber Resources for America's Future,* Forest Resource Report No. 14, 1958; 1963, *Timber Trends in the United States,* Forest Resource Report No. 17, 1965; 1970, *The Outlook for Timber in the United States,* Forest Resource Report No. 20, 1973.

To be classified as forest land, an area must be at least 10 percent stocked by forest trees of any size, or formerly having had such tree cover and not currently developed for nonforest use. Includes chaparral areas in the West and afforested acres. The minimum area for classification of forest land is 1 acre. Roadside, streamside, and shoulder belt strips of timber must have a crown width at least 120 feet wide to qualify as forest land. Unimproved roads and trails, streams, and clearings in forest areas are classed as forest if less than 120 feet in width.

Commercial timber land is forest land which is producing or is capable of producing crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Includes areas suitable for management to grow crops of industrial wood generally capable of producing in excess of 20 cubic feet per acre of annual growth. Includes both accessible and inaccessible areas.

Net volume of sawtimber is the net volume of the saw log portion of live sawtimber trees. A saw iog is a log meeting minimum approved log-grade specifications; or for species for which approved log grades are lacking, at least 8 feet long, with a minimum diameter inside the bark of 6 inches, and with deduction for defect no greater than two-thirds the gross volume. Sawtimber trees are live trees of commercial species containing at least one saw log. Softwoods must be at least 9.0 inches in diameter breast height, except in California, Oregon, Washington, and coastal Alaska where minimum diameter is 11.0 inches. Hardwoods must be at least 11.0 inches in diameter in all States.

Net growing stock volume is the net volume in cubic feet of live sawtimber and pole timber trees from stump to a minimum 4-inch top (of central stem) outside bark or to the point where the central stem breaks into limbs.

The data for 1953 and 1963 have been slightly revised from those shown in source documents to make them comparable with 1970 definitions.

L 10–11. Gross area **of** national forest system and other lands, **1905–1970.**

Source: U.S. Forest Service, *National Forest System,* annual issues.

Data are prepared from individual land transactions of the Forest Service, such as transfers from other agencies, land exchanges, purchases, and other adjustments.

Gross area within unit boundaries (series L 10) prior to 1936 included the total land area within the authorized boundaries of the units formally designated or proclaimed as national forests. Since 1936, other lands administered by the Forest Service, including national forest purchase units, experimental areas, land utilization projects, and other land units have also been included.

The Federal Government seldom has complete ownership of all the land within the national forests and other units under administration of the Forest Service. Parts of such units are under private, State, county, and municipal ownership, or under the jurisdiction of a Federal agency other than the Forest Service. Gross area under Forest Service administration (series L 11) is thus the net area in the units owned by the United States and administered by the Forest Service. National forests comprise the largest part of this net area, accounting for 98 percent of the total in 1970. National grasslands, administered under Title III of the Bankhead-Jones Farm Tenant Act, account for most of the remainder.

The source also includes statistics for States on the gross and net area of each national forest, purchase unit, experimental area, and land utilization area under the jurisdiction of the Forest Service.

L 12–14. Gross area approved **for** national forest purchase, **1912–1970.**

Source: U.S. National Forest Reservation Commission, *Annual Report,* annual issues.

The figures for gross area approved for purchase include the total area as of June 30 within purchase units that the Secretary of Agriculture had been authorized to purchase for national forest purposes by the National Forest Reservation Commission.

The source also includes statistics which show, by States and by national forests or purchase units, the area authorized by ehe Commission for purchase, the area purchased for national forests during each fiscal year, and the cost.

L 15–23. Volume and value of timber cut from national forest system areas, **1905–1970.**

Source: U.S. Forest Service, unpublished data.

Commercial sales (series L 17–19) include all sales from the national forests for which a charge is made. Nearly all commercial sales are made on a competitive bid basis with the sale going to the highest bidder. Most sales are timber sales (series L 17–18) but some material not measurable in board feet is also sold from the national

forests (series L 19). Some timber from the national forest is exchanged for land (series L 20–21) and some is disposed of under free- and administrative-use permits to settlers, miners, residents, and other similar users (series L 22–23).

Information on individual transactions involving national-forest timber is available from the Forest Service. Unpublished data of national-forest stumpage sales are also available for all sales in the form of quarterly compilations classified according to Forest Service regions, major species and product, e.g., pulpwood, saw logs, etc.

For a comparison of timber production on Forest Service lands and on lands administered by the Bureau of Land Management, see Robert S. Manthy, *Future Demands on the Public Lands,* vol. 111: *Probable Future Demands on the Public Lands,* Washington, D.C., Public Land Law Review Commission, National Technical Information Service Publication, PB 195–043. Table 14 in that publication shows that production of timber products on Federal lands during the period 1947–1968 ranged from 7 percent to 23 percent of total U.S. production.

L 24–27. Receipts from national forest system lands, **1905–1970.**

Source: U.S. Forest Service. Published in U.S. Dept. of Agriculture, *Agricultural Statistics, 1957, 1967,* and *1971* editions.

Receipts from the national forests are derived from timber and other forest product sales, settlement, and trespass; grazing and grazing trespass; and land uses such as power lines, resort and summer homesites, ski lifts, and mineral leases.

L 28–31. Payments to States and outlying areas, **1906–1970.**

Source: U.S. Forest Service, unpublished data.

The "25-percent fund" (series L 29) consists of payments from gross receipts of the previous fiscal year from each national forest to the State or outlying area in which the forest is situated for the benefit of public roads and schools under an Act of May 23, 1908 (35 Stat. 260) as amended. Payments are also made from timber receipts from the Tongass National Forest to Alaska for public schools and public roads, under an Act approved July 24,1956 (70 Stat. 605).

The "Arizona and New Mexico school fund" (series L 30) consists of payments made to the States of Arizona and New Mexico under an Act of June 20, 1910. From the gross receipts of the national forests in the two States, payments are made in the proportion that the area of land granted the States for school purposes within these national forests bears to the total area of all national forests within the two respective States.

"Payments to State of Minnesota" (series L 31) consist of payments made under an Act of June 22, 1948 (62 Stat. 568).

L 32–43. Forest tree distribution and forest management programs, **1939–1970.**

Source: U.S. Dept. of Agriculture, *Agricultural Statistics,* 1967 and *1972.*

Under the forest tree distribution program, series L 32–36, the Federal Government cooperates with State forestry agencies to distribute forest tree seedlings for forestation and windbreak purposes.

Data for the forest management program, series L 37–43, are collected in the field as the tasks are accomplished, and summarized by the Forest Service.

L 37, woodland owners. Defined as any private nonindustrial owner who owns from 1 acre to 5,000 acres or more of woodlands (forestland).

L 38, woodland (or forest land). Defined as land bearing forest growth or land from which the forest has been removed but which shows evidence of past forest occupancy and which is not currently developed for nonforest uses. To qualify as forest, an area must be at least 120 feet wide and 1 acre in area; have a sufficient number of trees to provide 16.7 percent crown coverage; or, lacking 16.7 percent, be likely to remain in forest use.

L 39, products harvested. Includes any cut from which an income is derived from the sale of forest products—sawtimber, veneer, poles, piling, pulpwood, etc. This may be a sanitation cut, or a thinning or final cut at the end of rotation.

L 40, gross sale value. The known or estimated stump value; the selling price of the trees on the stump.

L 41-43, expenditures. The Federal expenditures are appropriated from the Cooperative Forest Management Act of 1950; the State expenditures, from State legislative appropriated funds. The Federal share may not exceed the net expenditures by a State in any fiscal year.

L 44–47. Expenditures for cooperative forest fire control on Federal, State, and private lands, **1912–1970.**

Source: U.S. Dept. of Agriculture, *Agricultural Statistics,* various annual issues.

State and private expenditures (series L 46 and L 47) consist of expenditures for control under the Clarke-McNary section 2 program.

L 48–55. Forest fires and area burned over, **1926–1970.**

Source: U.S. Forest Service. **1926–1967,** *Forest Fire Statistics,* various annual issues; **1968–1970,** *Wildfire Statistics,* annual issues.

Data are based upon reports submitted by the office of the State Foresters, by the Regional Foresters of the Forest Service, the Department of Interior, and the Tennessee Valley Authority. The statistics obtained are for forest land and nonforested watershed lands in Federal ownership, and for State and privately-owned lands which are included in the Cooperative Forest Fire Control Program as authorized by section 2 of the Clarke-McNary Act of 1924.

Protected area (series L 50–53) includes all forest lands that receive some organized fire protection. Unprotected area (series L 54–55) includes all forest lands not covered by organized fire protection.

The source publication also presents information by regions and States on areas needing protection, areas protected and unprotected, and areas burned on both protected and unprotected forest land by type of ownership, and size of fires on protected areas. No field organizations are available to report fires on unprotected areas and the statistics for these areas are generally the best estimates available. Beginning 1966, when Arizona entered the Cooperative Forest Fire Control Program, statistics became available for all 50 States.

L 56–71. Forest product raw materials production, imports, exports, and consumption in constant 1967 dollars, **1900–1969.**

Source: U.S. Bureau of the Census and U.S. Bureau of Mines, *Raw Materials in the United States Economy: 1900–1969, Working Paper 35,* pp. 33, 35, 37, and 39.

The series is based on statistics compiled by the Forest Service and the Bureau of the Census. Forest products classes were combined into three major groups: Saw logs, pulpwood, and other forest products. The other forest products series include: Veneer logs, fuelwood (roundwood), other (except naval stores), turpentine, and rosin, These seven product classes, measured in physical quantity units were combined by means of unit-value weights. The basic unit values of forest products at first point of market were supplied by the Forest Service or, for naval stores, taken from reports of the Agricultural Marketing Service, Department of Agriculture. The quantity of production, imports, and exports series used were as compiled by the Forest Service and AMS, although the basic import and export series, and part of the production series were collected by the Bureau of the Census.

The production series represent about 99 percent of the total value of forest products from the United States (excluding Hawaii). The major item not included is Christmas trees. (Maple syrup and maple sugar are covered in the agricultural production series rather than in forest products.) Other minor forest products excluded are tanbark, holly, mistletoe, ferns, wild nuts, and balsam.

The import and export series, which represent nearly as high coverage of the total value of foreign trade in forest products, include the pulpwood equivalent of processed products, such as woodpulp, paper, and paperboard products, and such products as shingles and cork.

For the consumption series in terms of broad use classes, the Forest Service provided not only the series for roundwood fuelwood which is a part of the other forest products group, but also a series of estimates for residue, fuelwood which is implicitly included in the saw logs series, as well as appropriate unit-value weights for each of these series based on sample market values of such products in various States.

L 72–86. General note.

Industrial timber products include all products, except fuelwood, commonly cut from round sections of trees. Items such as Christmas trees, Christmas greens, naval stores, and other nontimber forest products are not included.

The production, imports, and exports of timber products as reported by the Bureau of the Census, the Forest Service, trade associations, and other sources are customarily shown in a wide variety of units, such as board feet, cubic feet, cords, pieces, linear feet, and variations of these units. Appropriate factors have been used to convert the different measures of the various products to standard units of measure (cubic-feet roundwood) so that one product can be properly compared with another or that all can be combined and treated as a group. Cubic-feet roundwood is a measure of the roundwood volume of a log or bolt (excluding bark) from which the various products such as lumber and veneer are cut.

L 72–74. Domestic production, net imports, and apparent consumption **of** industrial timber products, in roundwood equivalent, 1900–1970.

Source: 1900–1949, U.S. Forest Service, *The Demand and Price Situation for Forest Products, 1964,* table 2; 1950–1970, *1973–74* edition, table 2. Data are sums of the series for different product groups; for production (L 75, L 78, L 81, L 84, L 86), net imports (L 76, L 79, L 82, L 85, L 86), and apparent consumption (L 77, L 80, L 83, L 84).

L 75–77. Domestic production, net imports, and apparent consumption **of** lumber, 1900–1970.

Source: See source for series L 72–74.

Estimates have been converted to cubic-feet roundwood on the basis of 156 cubic feet per 1,000 board-feet softwoods and 153 cubic feet per 1,000 board-feet hardwoods lumber tally.

L 78–80. Domestic production, net imports, and apparent consumption **of plywood** and veneer, 1900–1970.

Source: See source for series L 72–74.

Data on the volume of logs consumed in the manufacture of veneers were first reported by the Bureau of the Census in 1905. Subsequently, the Bureau published data showing either log consumption or data with sufficient information on veneer or plywood production to permit the derivation of estimates of log consumption for 1905–1911, biennially for 1919–1939,1942–1945,1947, and annually 1951–1970. Data for all other years represent estimates derived by the Forest Service.

Logs consumed in the manufacture of veneer have been assumed to equal domestic production although small quantities of logs, mostly hardwoods, are imported each year by the veneer industry. Veneer logs commonly reported in board feet, log scale, have been converted to cubic-feet roundwood on the basis of 170 cubic feet per 1,000 board feet.

Net imports of plywood and veneer (series L 79) are converted to board feet, log scale, and then to cubic-feet roundwood. The small volume of plywood and veneer imported is included under production (series L 78).

L 81–83. Domestic production, net imports, and apparent consumption **of** pulp products, 1900–1970.

Source: See source for series L 72–74.

Domestic pulpwood production, net pulpwood imports, and the pulpwood equivalent of the net woodpulp and paper and board imports have been converted to cubic-feet roundwood on the basis of 77 cubic feet per cord.

L 84. Apparent consumption **of** miscellaneous products, 1900–1970.

Source: See source for series L 72–74.

"Miscellaneous production" includes cooperage logs, poles and piling, fenceposts, hewn ties, round mine timbers, box bolts, excelsior bolts, turnery bolts, shingle bolts, chemical wood, and a miscellaneous assortment of similar items. Fairly complete data are available for some of these items. For example, the Forest Service and the Bureau of the Census, either separately or jointly, published data which could be used to estimate the annual production of cooperage logs for 1905–1911 and 1918–1919; biennially for 1919–1939; 1947 and 1952. Similar information covering about the same years was published by these two agencies for hewn ties and poles. For some products, particularly poles, data reported by the Forest Service in cooperation with the American Wood Preservers Association in *Wood Preservation Statistics* were used as an indicator of production. Production estimates for mine timbers and other miscellaneous items have been based on periodic surveys made by the Forest Service or the Bureau of the Census. Imports of these products are small.

L 85–86. Imports and exports **of logs,** 1940–1970.

Source: See source for series L 72–74.

L 87–97. Per capita consumption **of** timber products, by major product, 1900–1970.

Source: U.S. Forest Service, 1900–1949, *Demand and Price Situation* for *Forest Products,* 1964, Miscellaneous Publication No. 983, 1964; 1950–1970, *Demand and Price Situation for Forest Products, 1973–74,* Miscellaneous Publication No. 1292, 1973.

These figures were derived by dividing the apparent consumption of each product or group of products by total population, including Armed Forces overseas, as of July 1 each year.

L 98–100. Lumber, domestic production, 1799–1970.

Source: U.S. Forest Service. 1799–1945, *Lumber Production* in *the United States,* 1799–*1946*; U.S. Bureau of the Census, 1946–1956, *Facts for Industry,* annual releases, "Lumber Production"; 1957–1970, *Current Industrial Reports,* "Lumber Production and Mill Stocks," series MA-24T, annual.

Data on lumber were first collected by the Census Office in the census of 1810 (for the year 1809). Subsequently, this agency collected and published statistics on lumber production for 1819 and decennially for 1839–1899, and annually from 1904 through 1954 except in 1905, 1906, 1913, 1915–1918, 1920, and 1948. The Bureau of Crop Estimates collected and published data for 1913, and the Forest Service for all other years.

For 1809–1859, only the value of lumber produced was included in the decennial reports of the Census Office, although some reference to number of mills or number of saws was often made. For 1869, 1879, and 1889, the total quantity of lumber produced was reported by States. Since 1899, lumber production has been reported in

quantity terms by States and species, although in recent years such reporting, based on sampling of the industry, has been restricted to major species and principal producing States.

Prior to 1912, except for decennial censuses (when there was some field followup of nonreporting mills by field agents), lumber production figures were based upon a mail canvass of producers for the entire Nation. Since 1912, except for 1948, the census in the Western United States has been conducted by mail supplemented by a field canvass to obtain reports from nonrespondents. In the Eastern States, statistics were obtained by mail canvass for 1912–1941. Since 1941, except for 1948, statistics for the East have been based either upon a complete field canvass (1942 and 1947) or upon a mail canvass supplemented by area sampling. For 1948, lumber production figures for the West were obtained by the Forest Service in cooperation with the West Coast Lumbermen's Association and the Western Pine Association through a mail canvass, with field followup of nonrespondents. For the East, 1948 figures are Forest Service estimates based upon data published by the National Lumber Manufacturers Association and other associations.

Eastern field canvasses in the early 1940's disclosed thousands of small sawmills and many larger mills not previously included in the annual surveys. These mills collectively produced a substantial volume of lumber. Accordingly, the Forest Service prepared revised estimates of lumber production for 1904–1908, 1910–1918, and 1920–1941 designed to include the production of nonreporting mills as well as of reporting mills. The revised estimates and a description of the methodology employed in revising reported lumber production estimates also appear in the source cited above for 1799–1945. In addition, this source presents lumber production figures prior to 1946, by species and States, and data on average value per thousand board feet for years prior to 1944. Data on lumber production by species and States are also available for 1946, 1947, and 1949–1970 in the Bureau of the Census publications cited above.

Production figures for 1869–1919 as reported in the decennial censuses of 1870–1920 were accepted as substantially correct. The figures for 1809, 1819, and 1839–1859 are estimates by the Forest Service based on value data from the decennial reports of the Census Office (see above). The figures for 1799 and 1829 are also Forest Service estimates.

L 101–106. Lumber, imports and exports, 1899–1970.

Source: U.S. Bureau of the Census, 1899–1946, *Foreign Commerce and Navigation of the United States,* annual issues; 1947–1970, series L 101–103, *United States Imports of Merchandise for Consumption,* annual issues, and series L 104–106, *United States Exports of Domestic and Foreign Merchandise,* annual issues.

Figures are the summation of import entries and warehouse withdrawals prepared by importers or their brokers, and of export declarations prepared by shippers or their authorized agents or brokers. Series L 101–103 include lumber imports from all U.S. outlying areas; series L 104–106 include exports to all U.S. outlying areas.

Lumber imports and exports include sawn timbers, boards, planks, scantlings, joists, box shooks, and sawn railroad ties where quantities are given in board feet.

Supplementary statistics on the value of lumber imports and exports as well as value and volume of imports and exports of forest products, such as logs and bolts, poles, piling, Christmas trees, woodpulp, paper and paperboard, and other forest products, by country of origin and destination, also appear in the sources cited above.

L 107–109. Lumber, apparent consumption, 1899–1970.

Source: See sources for series L 98–100 and L 101–106.

Figures represent production plus imports minus exports.

L 110–112. Lumber, per capita consumption, 1899–1970.

Source: U.S. Forest Service, unpublished data.

These figures were derived by dividing the apparent consumption figures (series L 107–109) by total population (including Armed Forces overseas) as of July 1 of each year.

L 113–121. Lumber production, by region, 1869–1970.

Source: U.S. Forest Service, 1869–1945, *Lumber Production in the United States, 1799–1946,* Miscellaneous Publication No. 669; U.S. Bureau of the Census, 1946–1956, *Facts for Industry,* annual releases, "Lumber Production"; 1957–1970, *Current Industrial Reports,* annual releases, "Lumber Production and Mill Stocks," series MA-24T.

The States included in each region are as follows:

New England
- Connecticut
- Maine
- Massachusetts
- New Hampshire
- Rhode Island
- Vermont

Middle Atlantic
- Delaware
- Maryland
- New Jersey
- New York
- Pennsylvania

Lake
- Michigan
- Minnesota
- Wisconsin

Central
- Illinois
- Indiana
- Iowa
- Kansas
- Kentucky
- Missouri
- Nebraska
- North Dakota
- Ohio
- Tennessee
- West Virginia

South Atlantic
- North Carolina
- South Carolina
- Virginia

South
- Alabama
- Arkansas
- Florida
- Georgia
- Louisiana
- Mississippi
- Oklahoma
- Texas

Rocky Mountain
- Arizona
- Colorado
- Idaho
- Montana
- New Mexico
- South Dakota
- Utah
- Wyoming

West Coast
- Alaska
- California
- Hawaii
- Nevada
- Oregon
- Washington

Note: Production data for 1904–1908 and 1910–1914 are not adjusted for underreporting and therefore do not agree with the totals shown for series L 98.

L 122–137. Lumber production, by principal species, 1869–1970.

Source: See source for series L 113–121.

Production by species for the years 1904–1908, 1910–1918, and 1920–1941 are not adjusted for underreporting and, therefore, do not agree with the totals shown for L 98–100.

L 138–150. Exports and imports of logs, by major species, 1950–1970.

Source: U.S. Forest Service, *Demand and Price Situation for Forest Products, 1971–1972,* Miscellaneous Publication No. 1231, 1972, tables 13 and 15.

These data are from two reports published by the Bureau of the Census: Exports, *U.S. Exports — Commodity by Country,* FT 410, monthly and cumulative; and imports, *U.S. Imports — Commodity by Country,* FT *135,* monthly and cumulative. These publications contain data on the volume and value of logs exported and imported, respectively, by major species and by country of origin and destination.

L 151–165. Plywood production, imports, exports, and consumption, by softwoods and hardwoods, 1950–1970.

Source: U.S. Forest Service, *Demand and Price Situation for Forest Products, 1971–1972,* Miscellaneous Publication No. 1231, 1972, table 31.

The basic source for these data is the Bureau of the Census in *Softwood Plywood,* Current Industrial Reports, series MA-24H, published annually since 1958; and *Softwood Plywood and Veneer,* in the *Facts for Industry* series M-24H, published annually in prior years; *Hardwood Plywood,* Current Industrial Reports series MA-24F, published annually since 1958, and in the *Facts for Industry* series

M-24F under various titles in prior years. In addition to total production, consumption of veneer and veneer logs, both domestic and imported, is shown in the reports for most recent years. Also included are data on production by State for softwood plywood and by region for hardwoods, as well as species and grade production. Data on imports and exports are from Bureau of the Census, *U.S. Imports—Commodity by Country,* FT 135, monthly and cumulative, and from *U.S. Exports—Commodity by Country,* FT 410, also monthly and cumulative. These publications contain data on the volume and value of plywood and veneer imported and exported, respectively. Data are shown by major species and by country of origin or destination.

Apparent consumption is production plus imports minus exports. Per capita consumption has been calculated by dividing apparent consumption by the total U.S. population including Armed Forces overseas.

L 166, L 169, and **L 172.** Domestic production **of** pulpwood, woodpulp, and paper and board, **1809–1970.**

Source: 1809–1904, 1914, 1929, 1931, 1933, 1935, 1937–1970, U.S. Bureau of the Census, *Census of Manufactures,* various reports; various *Facts for Industry* reports, retitled *Current Industrial Reports,* series M26A; and other reports issued annually; 1905, 1916–1918, and 1920, U.S. Forest Service, unpublished data; all other years, joint reports of the Bureau of the Census and the Forest Service. The separate and joint annual releases of the Bureau of the Census and the Forest Service were issued under the general title, "Pulp, Paper, and Board."

These data are also published by the American Paper Institute, in *The Statistics of Paper,* 1960 and 1971 editions, and *Wood Pulp Statistics,* annual issues.

For nearly all years, statistics have been based upon a mail canvass of woodpulp and paper producers.

Pulpwood production figures (series L 166) were reported by the Bureau of the Census for 1869–1899 in the decennial census reports for 1870–1900. In most years since 1904, data have been published showing domestic receipts (production), imports, species, and average cost delivered at manufacturing plants. Domestic pulpwood receipts and domestic production are considered to be synonymous.

For 1946–1970, the Forest Service has published annual statistics in "Pulpwood Production in the South," which shows pulpwood production by county and by softwoods and hardwoods in Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia. It has also published similar data showing pulpwood production by species in Michigan, Minnesota, and Wisconsin.

Woodpulp production figures (series L 169) were reported decennially for 1869–1889. In 1899, 1904, 1909, 1914, and annually since 1916, woodpulp production has been reported by major grades, i.e., mechanical, sulfite, soda, sulfate, and more recently semichemical, defibrated and exploded, and special alpha and dissolving grades.

Paper and board production figures (series L 172) for 1809, 1819, 1839, 1849, and 1869 are based on value data of paper production collected in the decennial censuses. Since 1870, for all years during which data were published, paper production was reported in quantity terms classified by newsprint, book paper, coarse paper, fine paper, container board, and other major grades.

In recent years the Bureau of the Census monthly report M26A (cited above) has presented data for domestic pulpwood receipts, imports, consumption, and inventories by hardwoods and softwoods and by region. The annual M26A summary presents these data by States. Figures for woodpulp production, inventories, and consumption, by grade are also shown in M26A. The same monthly report shows production data for nearly 60 grades of paper and paperboard for recent years; the annual summary over a longer period has shown production of the major grades of paper by States and total production for nearly 165 separate grades of paper and paperboard.

L 167, L 170, and **L 173.** Net imports **of** pulpwood, woodpulp, and paper and board, **1899–1970.**

Source: Computed by the U.S. Forest Service from annual issues of the following U.S. Bureau of the Census publications: 1899–1946, *Foreign Commerce and Navigation of the United States;* 1947–1963, *U.S. Imports of Merchandise for Consumption* (FT 110) and *U.S. Exports of Domestic and Foreign Merchandise;* 1964–1970, *U.S. Imports—Commodity by Country* (FT 135) and *U.S. Exports—Commodity by Country* (FT 410).

Net imports represent gross imports minus gross exports.

L 168, L 171, and **L 174.** Apparent consumption **of** pulpwood, woodpulp, and paper and board, **1899–1970.**

Source: U.S. Forest Service. Computed by U.S. Forest Service, See source notes for series L 166, L 169, and L 172; and L 167, L 170, and L 173.

Apparent consumption represents production plus net imports,

L 175. Waste paper consumption in paper and board, **1904–1970.**

Source: American Paper Institute, Inc., New York, *Wood Pulp Statistics,* 36th and 32d editions (copyright).

L 176–177. Domestic production **of** turpentine and rosin, **1900–1970,**

Source: U.S. Department of Agriculture. 1900–1943, Agricultural Marketing Service, *Naval Stores Statistics, 1900–1954,* and Commodity Stabilization Service, *World Trends in Supply, Distribution and Prices of Naval Stores.* 1944–1960, Statistical Reporting Service, *Agricultural Statistics, 1967,* table *805;* 1961–1970, *Agricultural Statistics, 1971,* table *801.* (1900–1931, figures derived from trade estimates published in *Gamble's International Naval Stores Yearbook;* 1932–1944, figures collected and published by Bureau of Agricultural and Industrial Chemistry; 1944–1970, issued by Statistical Reporting Service.)

Supplementary data showing naval stores consumption and stocks, production by type of extraction process, consumption of turpentine and rosin by type of industrial user (1922–1970), and average price and value of gum naval stores are also presented in *Naval Stores Statistics, 1900–1954,* cited above, and in *Annual Report of Naval Stores.*

Beginning with the 1948 crop year, the current AMS report, *Naval Stores Market News,* presents monthly production, stock, and export data for all naval stores except rosin oil. Information on consumption, prices, and stocks at consumption points which is not covered in the monthly or weekly report is included in the annual issue of this report.

L 178–191. Apparent consumption **of** paper and board, **by** principal grades, **1899–1970.**

Source: American Paper Institute, 1899–1941, *The Statistics of Paper,* 1960 edition (copyright). U.S. Bureau of the Census, 1942–1958, *Facts for Industry,* "Pulp, Paper and Board," series M14A, annual; 1959–1970, *Current Industrial Reports,* "Pulp, Paper and Board," series M26A, annual.

Data shown are apparent consumption, i.e., production plus imports minus exports, except as noted in the footnotes. Paper and board exports are also shown in Bureau of the Census, *U.S. Exports Schedule B, Commodity and Country,* report FT *410* for December of each year. Paper and board imports are also shown in *U.S. Imports–TSUSA Commodity by Country,* annual, report FT-246.

The *Facts for Industry* and *Current Industrial Reports* series indicated above report production of paper and board by State and region each year as well as woodpulp and pulpwood consumption. Monthly production of paper and board by grade is also shown.

L 180, newsprint paper. A generic term used to describe paper generally used in the publication of newspapers. It does not include

printing papers of types generally used for other purposes even though such papers may be to some extent used by newspapers.

L 181, groundwood paper. A general term applied to a variety of papers made with substantial proportions of mechanical woodpulp together with chemical wood pulps, and used mainly for printing and converting purposes.

L 182, book paper. A general term used to define a class or group of papers that are most suitable for the graphic arts, exclusive of newsprint. The physical characteristics of the paper are varied to meet the type of impress employed and the prospective use of the article produced.

L 183, fine paper. A general term including writing, bristols, cover, text, and thin papers. Most are made from chemical pulps although rag pulps are used in producing certain specialty grades, such as bond, currency, ledger, and maps.

L 184, course and industrial paper. A general term applied to various grades of paper used for industrial purposes such as bag papers, gummed types, towels, tabulating card stock, blotting paper, etc.

L 185, sanitary and tissue paper. A general term indicating a class of papers of characteristic gauzy texture. In addition to sanitary tissues they include wrapping tissue, waxing tissue, fruit and vegetable wrapping stock, etc.

L 186, construction paper. A general term applied to a class of paper used in building construction for sheathing and under flooring and may be converted to such products as roofing, sheathing, and tarred or asphalt-coated vapor barrier.

L 188, container board. A general term designating solid fiber or corrugated combined board used in the manufacture of shipping containers and related products and also the component materials used in the fabrication of corrugated board.

L 189, bending board. Includes folding boxboard used for the manufacture of collapsible or folding cartons and special food board used in the packaging of milk, frozen food, and other similar foods and as containers for hot and cold drinks.

L 190, building board. A general term describing paper boards used by the building trades. In this tabulation, both hardboard and insulating board are included.

L 192-198. Newsprint production, shipments, consumption, stocks, imports, and prices, **1935-1970.**

Source: U.S. Bureau of Economic Analysis, *Survey of Current Business,* monthly issues.

L 192-193, 195, production, shipments, stocks at mills. Data are from the American Paper Institute, Newsprint Division, New York. They cover virtually the entire industry in the United States (including Alaska beginning 1961). Shipments include tonnage invoiced (whether shipped or not); stocks at mills include supplies at destination warehouses not yet invoiced to customers.

L 194, 196, consumption by publishers, stocks at and in transit to publishers. Data are from the American Newspaper Publishers Association, New York. Data for all years are as reported by publishers who, over the period covered here, accounted for over 70 percent of U.S. newsprint consumption. Beginning 1961, the consumption figures include data for Alaska and Hawaii. Stocks at and in transit to publishers are those on hand in the city of publication plus tonnage billed to the publishers by mills, but not received.

L 197, imports. Data are from the U.S. Bureau of the Census. They cover "imports for consumption" of standard newsprint paper, and are compiled from import entriesfiled with U.S. Customs officials. They show imports into the U.S. Customs area from foreign countries.

L 198, wholesale price. Data are from the U.S. Bureau of Labor Statistics. The prices quoted are for a ton of standard newsprint, rolls, contract, manufacturer to publisher, f.o.b. mill, freight allowed or delivered. Beginning 1952, the prices are quotation averages for one day each month (usually in the week containing the 15th), based on data reported by various sellers (no fewer than three) of the commodity; prior to 1952, they are quotation averages for one day each week.

L 199-202. Stumpage prices for selected species, **1910-1970.**

Source: U.S. Forest Service. 1910-1949, *The Demand and Price Situation for Forest Products, 1964* edition, table 5, and unpublished data; 1950-1970, *1972* edition, table 5, and unpublished data.

See also text for series L 15-23. All national-forest prices referred to are bid prices for timber sold on a Scribner Decimal-C log scale basis, except in the Northeastern States where international ¼-inch log rule is used. Prices exclude timber sold by land exchanges and from land utilization project lands.

Stumpage prices of private timber sales and log prices were compiled by major species and principal producing regions during the period 1900-1934 and published by the Department of Agriculture in Technical Bulletin No. 626, *Stumpage Prices of Privately Owned Timber in the United States.* Comparable data for 1935-1943 and 1945 were published by the same agency in Statistical Bulletin Nos. *57,* 62, 66, 71, 75, 76, 78, 79, 80, and 82. Prices shown in these publications were obtained through a mail canvass of timber sellers and buyers, such as independent loggers, sawmill operators, and other wood-using industries. The unit prices reported are of variable accuracy since exact information was lacking on timber volume, quality, accessibility and other factors that determine stumpage and log prices. These data, however, constitute a comprehensive price series on private stumpage and log prices during earlier years and are considered useful in charting general trends and timber values.

Data on lumber values per thousand board feet, f.o.b. mill, are available for specified years in the Department of Agriculture Miscellaneous Publication No. 669, *Lumber Production in the United Stales, 1799-1946.* Data on lumber prices and price indexes have also been published by the Bureau of Labor Statistics since 1890. The publications of the Bureau of Labor Statistics vary in detail from year to year but, in general, give the average price, f.o.b. mill, or at some stated delivery point, for various species of lumber, by grade for major species. (For further detail on Bureau of Labor Statistics data, see text for series L 206-210).

Douglas-fir figures (series L 199) for 1910-1931 represent national-forest timber sales of all species in Washington and Oregon; for 1932-1941 and 1957-1970, all species in western Washington and western Oregon; and for 1944-1956, national forest and Bureau of Land Management sales, Douglas-fir only, in western Washington and western Oregon.

Southern pine figures (series L 200) for 1910-1934 are stumpage prices of privately owned second growth southern pine timber as reported in Department of Agriculture Technical Bulletin No. *626, Stumpage Prices of Privately Owned Timber in the United States;* for 1935-1949, national-forest timber sales for all southern species (most of which, however, were southern pine); and for 1950-1970, national-forest timber sales for southern pine only.

Sugar and ponderosa pine figures (series L 201 and L 202) represents national-forest timber sales for these species in California.

L 203-204. Douglas fir **log** prices, **1910-1970.**

Source: U.S. Forest Service. 1910-1949, *The Demand and Price Situation for Forest Products, 1964* edition, table 5; 1950-1970, *1972* edition, table 5.

For 1910-1932, data were derived from trade estimates as published in the magazine, *The Timberman;* for 1933-1962, data were derived from a compilation of average annual regional log values based on transactions shown in the Pacific Northwest Loggers Association report, *Composite Sale Analyses;* for 1963-1970, data are from the Industrial Forestry Association.

L 205. Douglas fir lumber prices (wholesale), **1910-1966.**

Source: U.S. Forest Service, unpublished data.

For 1910–1929, data were derived from Bureau of the Census or Forest Service reports (or both) on lumber; see text for series L 98–100. For 1930–1970, data were derived from publications of the Western Wood Products Association (formerly West Coast Lumberman's Association), which show average realization on lumber shipments f.o.b. mill.

L 206. Wholesale price index for lumber, **1900-1970.**

Source: For 1947–49 base, 1900–1925, U.S. Forest Service, unpublished data; 1926–1930, U.S. Bureau of Labor Statistics, unpublished data. For 1967 base, 1926–1970, U.S. Bureau of Labor Statistics, *Handbook of Labor Statistics, 1971,* p. 280.

Figures for 1900–1912 were converted to a 1947–49 base by the Forest Service from an index (1935–39 = 100) of wholesale lumber prices published in Bureau of the Census, *Raw Materials* in *United States Economy, 1900–1952.* Figures for 1913–1925 were similarly converted from an index (1926 = 100) published in Bureau of Labor Statistics, *Wholesale Price Indexes.*

The Bureau of Labor Statistics began publishing price data on lumber in 1890 with a series that showed wholesale prices per thousand board feet (with price indexes) for several important lumber species at designated points. In 1913, coverage was expanded and an index for all lumber was added.

L 207. Wholesale price index for plywood, **1947-1970.**

Source: U.S. Bureau of Labor Statistics, unpublished data.

Figures for 1936–1957 on a 1947–49 base are shown in Forest Service, *Price Trends and Relationships* for *Forest Products,* 1957.

L 208. Wholesale price index for woodpulp, **1926-1970.**

Source: See source for series L 207.

Woodpulp (sulfite domestic unbleached) figures were first published by the Bureau of Labor Statistics in 1913. In 1926, a more comprehensive series covering selected grades of woodpulp and an average wholesale price index was instituted. Between 1926 and 1970 a number of changes were made in coverage. In 1970, the Bureau of Labor Statistics coverage included wholesale prices and price indexes for five grades of woodpulp.

L 209. Wholesale price index for paper, **1926-1970.**

Source: See source for series L 207.

Wholesale prices and price indexes for newsprint and manila wrapping paper were first collected and published by the Bureau of Labor Statistics in 1890. In 1926, a more comprehensive series along with an average wholesale price index covering selected grades of paper was instituted. Between 1926 and 1970 a number of minor changes were made in coverage. In 1970, the Bureau of Labor Statistics coverage included an all paper-price index, a price index for 10 grades of paper, and the average price for most of these grades.

L 210. Wholesale price index for paperboard, **1926-1970.**

Source: See source for series L 207.

L 211. Wholesale price index of lumber, **1798-1932.**

Source: *Memoir 142, Wholesale Prices for 213 Years, 1720 to 1932* (part 1), pp. 107–119, by G. F. Warren and F. A. Pearson, published by the N.Y.S. College of Agriculture and Life Sciences, a statutory unit of the State University at Cornell University.

Prior to 1915, various lumber species at different delivery points were used in constructing this index, See source for further detail. For 1915–1932, the index numbers are based on the lumber index published by the Bureau of Labor Statistics.

L 212-223. Average hourly earnings in timber-based industries, **1950–1970.**

Source: US. Bureau of Labor Statistics, *Employment and Earnings Statistics* for *the United States,* annual issues.

These data are derived from reports of payrolls and man-hours for production and related workers in manufacturing, and nonsupervisory employees in the remaining private nonagricultural components.

Production and related workers include working foremen and all nonsupervisory workers (including leadmen and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and watchman services, product development, auxiliary production for plant's own use (e.g., power plant), and recordkeeping and other services closely associated with the above production operations.

Average hourly earnings are on a "gross" basis, reflecting not only changes in basic hourly and incentive wage rates but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. Shifts in the volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general earnings averages.

Averages of hourly earnings differ from wage rates. Earnings are the actual return to the worker for a stated period of time; rates are the amounts stipulated for a given unit of work or time.

More Recent Data for *Historical Statistics* Series

Statistics for more recent years in continuation of many of the still-active series shown here appear in annual issues of the *Statistical Abstract of the United States,* beginning with the 1975 edition. For direct linkage of the historical series to the tables in the *Abstract,* see Appendix I in the *Abstract.*

Series L 1–9. Forest Land—Total and Commercial Timber Area, Net Volume of Sawtimber and Net Volume of Growing Stock: 1953, 1963, and 1970

[As of January 1]

Year and region [1]	Total forest land (mil. acres)	Commercial timber land ownership (mil. acres)				Net volume of sawtimber (bil. bd. ft.)			Net volume of growing stock (bil. cu. ft.)
		All ownerships	Federally owned or managed	State, county, and municipal	Private	Total	Softwood	Hardwood

[1] Includes materials not measurable in board feet, such as Christmas trees, tanbark, turpentine seedlings, Spanish moss etc.
[2] Land exchange included with cdmmercial sales beginning 1966.
[3] Includes all sales for which a charge is made.
[4] Beginning 1960. includes collections for forest restoration under the Knutson-Vandenberg Act of 1930.
[5] Calendar–year data, 1922 to 1982. Figures for 1921 are for July 1, 1920, to Dec. 31, 1921. Figures for both 1932 and 1933 include data for July 1 to Dec. 1, 1932.
[6] Includes value of quantities not reducible to board feet, as follows, in dollars: 1934, 146; 1935, 870; 1937, 1,969; 1938, 3,643; 1940, 3,774; 1944, 7,304; 1945, 8,291; 1946, 8,394; 1947, 14,895; 1948, 20,968; 1949, 21,270; 1950, 20,468; 1951, 20,081; 1952, 15,477; 1953, 13,228; 1954, 23,281; 1955, 16,202; 1956, 15,501; 1957, 20,004; 1958, 19,873. For 1959–70, data not available.
[7] Includes land–exchange figures from beginning of exchange cuttings.
[8] Estimated.

[1] Beginning 1989, includes receipts from National Grasslands and Land Utilization Farm Tenant Act lands: beginning 1941, national-forest revested Oregon and California Railroad Grant Lands; and beginning 1948, Tongass (Alaska) Suspense Account.

[2] Payments made during years following collection of receipts.

[3] Beginning 1956, includes 25 percent of Tongass (Alaska) suspense account receipts: for all years, other 25-percent funds for Alaska are also included.

Series L 32–43, Forest Tree Distribution and Forest Management Programs: 1939 to 1970

Series L 72–86. Production, Net Imports, and Apparent Consumption of Industrial Timber Products in Roundwood Equivalent: 1900 to 1970

[In millions of **cubic** feet, rounded to the nearest 5 million. Excludes fuelwood]

Year	Total			Industrial roundwood used for—												
				Lumber			Plywood and veneer			Pulp products			Miscellaneous products apparent consumption	Logs	
	Domestic production	Net imports	Apparent consumption	Domestic production	Net imports	Apparent consumption	Domestic production	Net imports	Apparent consumption	Domestic production	Net imports	Apparent consumption		Imports	Exports

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] South Dakota is included in the Rocky Mountain Region because its production is limited to western species.
[2] For 1955–1959, Nevada included in Rocky Mountain Region; all other years, in West Coast.

Series L 122–137. Lumber Production, by Principal Species: 1869 to 1970

[In millions of board feet. Figures for certain years not adjusted for underreporting; see text]

* Denotes first year for which figures include Alaska and Hawaii.
NA Not available.
[1] Includes Idaho white pine, ponderosa pine, and sugar pine; prior to 1957, also includes lodgepole pine.
[2] For 1950, 1952 and 1953, and beginning 1957, lodgepole pine included in other softwoods; for other years included in western pine.
[3] Separate data not available; included in series L 130, "other softwoods."
[4] Forest Service estimates.
[5] Includes some lumber not distributed by species.
[6] Data for eastern species represent Forest Service estimates: all other reported by Bureau of the Census.

Series L 138–150. Exports and Imports of Logs, by Major Species: 1950 to 1970

[In millions of board feet. log scale]

NA Not available.

[1] Beginning 1929, indudes changes in stocks.

[2] Production only.

[3] 1899–1919, Droduction only. Includes absorbent paper. Includes a small amount of imported groundwood paper.

[4] 1899–1919, production only. 1955–1970, not strictly comparable with prior years due to reporting changes.

[5] 1899–1919, production only. 1920–1970, includes wrapping, shipping sack, bag, converting, special industrial, and other similar grades of paper and absorbent paper. 1955–1970, not strictly comparable with prior years due to reporting changes.

[6] 1899–1919, production only.

[7] 1925–1936, production only.

[8] Includes special food board.

[9] Includes hardboard and insulating board.

[10] Includes nonbending, special paperboard, cardboard, wet machine board, and other similar grades of board.

Series L 192–198. Newsprint Production, Shipments, Consumption, Stocks, Imports, and Price: 1935 to 1970

[In thousands of short tons, except price]

Year	Production	Shipments from mills	Consumption by publishers	Stocks, end of year: At mills	Stocks, end of year: At and in transit to publishers	Imports	Wholesale price, average (dollars per ton)	Year	Production	Shipments from mills	Consumption by publishers	Stocks, end of year: At mills	Stocks, end of year: At and in transit to publishers	Imports	Wholesale price, average (dollars per ton)

Chapter L

Fisheries (Series L 224-370)

L *224–370.* General note.

Fisheries data were largely compiled or derived from publications of the National Oceanic and Atmospheric Administration, National Marine Fisheries Service (NMFS). Additional detail can be found in these publications and in those of predecessor agencies (i.e., the Bureau of Fisheries] Department of Commerce, prior to July 1940; the Commission of Fish and Fisheries prior to 1904; and the Fish and Wildlife Service, Bureau of Commercial Fisheries, Department of Interior, prior to October 1970). Statistical canvasses relating to the fishing industry carried out in 1880 and 1908 were made in conjunction with the Bureau of the Census (and predecessor agencies) and were published as Senate Document No. 124, 47th Congress, 1887, and as a Bureau of the Census Special Report, 1911, respectively. Since 1941, preliminary figures on many present and historical aspects of the fisheries have been published by the NMFS in the form of leaflets entitled *Current Fishery Statistics.* Final and more detailed figures are published by the NMFS as comprehensive annual Statistical Digests and in *Annual Reports of Alaska Fishery and Fur-Seal Industries* (last printing was in 1955 for the latter).

The first comprehensive statistical study of the fisheries and fishery industries of nearly all the United States was made for the year 1880 by the U.S. National Museum with the cooperation of the Commission of Fisheries and the Superintendent of the Tenth Census. The first complete statistical canvass of the entire United States was made for 1908 by the Bureau of the Census. The next general survey of the entire United States was not made until 1931. Periodic genera1 surveys of a limited number of States or areas were made for the years from 1881 to 1907 and from 1909 to 1930. Various sections were surveyed during the years 1932 to 1949. A complete survey of all sections of the country was made for 1950. Since then all of the coastal areas have been canvassed annually. Annual surveys of the Mississippi River and its tributaries have been continuous since 1962. Since 1954 all sections of the United States were canvassed to provide complete data on the wholesale and manufacturing segments of the fisheries industries.

While extended series for successive years are lacking for most regions of the United States, there are long continuous records available for landings at certain important ports or for certain species. The latter have been collected in connection with annual surveys of canned fish and industrial products. Data on the production of canned fishery products and industrial fishery products have been collected annually for all regions since 1921, while information was obtained on the production of packaged fish for 1926 and annually since 1928.

The coastal statistical surveys include canvasses of the commercial fisheries of the contiguous and noncontiguous ocean waters and bays of the United States and as far up the coastal rivers as commercial fishing is conducted. The Mississippi River region includes tributaries thereof. The Great Lakes region encompasses the bays thereof, the international lakes of northern Minnesota] and the rivers emptying into these waters.

Several methods for the collection of fishery statistics have been employed. Where data were not available from some central private or public source, canvassing both by interview and by correspondence has been used to secure the required information from fishing vessel owners and operators, wholesale dealers, and manufacturers of fishery products.

Since 1946, a growing number of State fishery agencies have developed independently, or in cooperation with the NMFS, relatively complete systems chiefly with respect to fish catch statistics which greatly facilitate the surveys in those States. In such instances, the NMFS conducts only supplementary surveys to make the catch statistics comparable with those of other States and to secure additional wholesale and manufacturing data. Securing fishery statistical data by the Federal fishery agencies has been on a nonmandatory basis.

Until 1951, all statistics of the Alaska fisheries were collected by canvass of the industry chiefly through correspondence. Subsequently, catch statistics have been compiled from copies of dealer invoices for fish and shellfish purchased from individual fishermen that are required by law to be furnished to the NMFS. This procedure, first instituted by California in 1917, is becoming more generally used in a number of coastal States, and is improving the source materials available for the compilation of national statistics by the Federal Government.

Statistics on commercial landed catches of fish are usually shown in the published reports as round salable weight, being converted to such a common basis by established conversion factors. In the Great Lakes States, catches are usually shown in weights as landed, which may be in the round or eviscerated condition. Oyster, clam, and clam-like shellfish data are usually expressed in amounts of recoverable meats. Crabs, shrimps, squid, and octopus landings are shown in round weights. Whaling production from land-based plants in the United States is included in the total of fish production in series L 224 and L 244. These land-based plants have not produced more than 17 million pounds of whale products in any year of record in this report. These series do not include the high-seas production of whale products either in this or in the previous century. The yield is expressed in terms of the weight of products produced, not the live weight of the whales.

The values of the landed catches are gross dollar returns to catching vessels and fishermen. The value of processed or manufactured items is that by the manufacturer. Data are usually collected and published on a calendar-year basis, although compilations for some States are on a fiscal-year basis.

Statistics of landed catches do not include either the marine or freshwater catches made for personal use including those by Indian populations, or for sport, or landings by foreign fishing vessels in U.S. ports, or imports. They include catches by U.S. fishing vessels landed in foreign ports for transshipment in bond to the United States.

Since 1942, the commercial catches have been credited to the port at which they were landed. Prior to that time the entire annual catch of a vessel was credited to the port out of which the majority of its yearly operations were conducted, regardless of the actual point of landing. Due to the generally broad regional grouping of the data shown here, the effect of the change in method of crediting yields upon the trends of landings has, for the most part, been insignificant. While neither method provides completely satisfactory information as to the approximate location of the fishing grounds producing the landed catches, the present practice permits closer estimates than the former.

All general references to fish include fish, shellfish, and other marine or freshwater products including those of the land-based segment of the U.S. whaling industry.

Fisheries outside the United States, some products of which enter the domestic market duty-free, are those of American Samoa and the Commonwealth of Puerto Rico. Fisheries of these areas are not subject to Federal control and are not included in the series shown here unless otherwise indicated. Total commercial production in these fisheries is of relatively small magnitude. Canned tuna for the U.S. market is the chief commercial item produced in American Samoa. Hawaiian fisheries statistics are presented annually since 1948 in *Fishery Statistics of the United States,* Statistical Digests.

L 224–235. Yield and value **of** domestic fisheries, imports, and exports, **1880–1970.**

Source: 1880, **U.S.** Commission of Fish and Fisheries, *The Bisheries and Fishery Industries of the United States,* 1887; 1889–1917, H. F. Taylor, *Economics of the Fisheries of North Carolina,* part III, "Survey of Marine Fisheries of North Carolina," University of North Carolina Press, Chapel Hill (copyright), 1951; 1921–1938, U.S. Bureau of Fisheries, *Fishery Industries of the United States,* annual issues; 1939–1970, **U.S.** National Oceanic and Atmospheric Administration and predecessor agencies, *Fishery Statistics of the United States,* annual Statistical Digests.

Since 1880, complete or partial surveys have been made of the various regions of the United States, except for the Mississippi River, with sufficient frequency to produce satisfactory annual estimates of the yield and value of the U.S. fisheries. Due to the relative stability and low magnitude of the Mississippi River production, the inclusion of interpolated estimates for that region do not significantly affect the national totals.

Prior to 1921, except for 1909–1914, Taylor provides a well validated and statistically satisfactory series of annual figures by summation of critically adjusted and interpolated data based upon various individual State and regional data published by the Bureau of Fisheries or its predecessor, the Commission of Fish and Fisheries. No statistically satisfactory national totals can be provided for 1909 to 1914 (Taylor). A satisfactory Alaska total is provided by J. N. Cobb, *Products of the Commercial Fisheries of the United States,* American Fisheries Society Transactions, XLVIII, which, added to Taylor's 1917 U.S. total, provides a combined total for that year.

Prior to 1908, records of salt fish were not converted to equivalent fresh round weights except for 1880. It was estimated (Taylor) that such salt fish in 1887 represented at least 20 percent of the national total catch of food-fish species. By 1920, this proportion had declined to about 1 percent. Estimated corrections back to 1908 (derived from Taylor, figure 7, p. 379) have been added to the estimates of national totals (Taylor, p. 480).

Statistics on foreign fishery trade are obtained from compilations made by the Bureau of the Census. Statistics on all known imported or exported fishery products have been assembled and published annually since 1924. For earlier years figures are available in reports of the Census Bureau and predecessor agencies.

See also general note for series L 224–870.

L 236–253. Quantity and value **of** landed catches in the United States, by regions, **1880–1970.**

Source: 1880–1903, U.S. Commission of Fish and Fisheries (in cooperation with the **U.S.** Bureau of the Census and its predecessor agencies), *Commissioner's Report and Appendices,* reports for 1880 and 1908; 1904–1939, U.S. Bureau of Fisheries, *Fishery Industries of the United States,* annual issues; 1940–1970, see publications by U.S. National Oceanic and Atmospheric Administration and its predecessor agencies, and H. F. Taylor, cited for series L 224–235.

The regions are composed as follows:

- New England States
  - Maine
  - New Hampshire
  - Massachusetts
  - Connecticut
  - Rhode Island
- Middle Atlantic States
  - New York
  - New Jersey
  - Delaware
- Chesapeake Bay States
  - Maryland
  - Virginia
- South Atlantic States
  - North Carolina
  - South Carolina
  - Georgia
  - East coast Florida
- Gulf States
  - West coast Florida.
  - Alabama
  - Mississippi
  - Louisiana
  - Texas
- Pacific Coast States
  - California
  - Hawaii (beginning 1969)
  - Oregon
  - Washington
- Lakes Region
  - Great Lakes
  - International lakes of northern Minnesota
- Mississippi River
  - Including tributaries

Regional totals prior to 1909 include cured fish in terms of product weights and not round weights used for figures in series L 224.

In spite of deficiencies arising from interpolating values over periods during which no canvasses were made in some regions, it is probable that these figures provide statistically satisfactory estimates of the trends of quantity and value of landed catches of all species combined in the several regions.

The annual and secular changes for the various regions have resulted from changes in composition of the catches from time to time. These changes may be deduced from the figures for series L 262–298.

Since only seven surveys were made of the Mississippi River fisheries during the period from 1899 to 1955, no extended production records are available for the principal species of the Mississippi River region. During that period, buffalo fish, bullheads and catfish combined, and mussel shells for the button industry, provided an average of 15 percent, 12 percent, and 42 percent, respectively, of the total recorded average annual production in this region. After reaching a high point of 82 million pounds in 1908, freshwater mussel-shell production has shown a declining trend to 7 million pounds in 1969.

See also general note for series L 224–370.

L **254–261.** Fisheries — employment, fishing craft, and establishments, **1930–1970.**

Source: U.S. National Oceanic and Atmospheric Administration, *Fishery Statistics of the United States,* annual Statistical Digests.

L 255, fishermen. Includes all persons engaged in commercial fishing operations.

L 257–260, craft utilized. Fishing craft having a capacity of five net tons or more are called vessels; those with less are called boats.

L **262–269.** Landed catches of principal species in New England States, **1876–1970.**

Source: 1876–1886 (except for 1880), U.S. Bureau of Fisheries, *Statistics of the Mackerel Fishery of the East Coast of North America, 1804 to 1930,* Investigational Report No. 19, vol. 1, 1934; 1880, U.S. Commission of Fish and Fisheries, *The Fisheries and Fishery Industries of the United States,* 1887; 1887–1950, U.S. Fish and Wildlife Service, *Fishery Statistics of the United States, 1950,* Statistical Digest No. 27; 1951–1970, **U.S.** National Oceanic and Atmospheric Administration and predecessor agencies, *Fishery Statistics of the United States,* annual Statistical Digests.

The species shown here have accounted for between 65 percent and 87 percent of the total New England fish production (series L 236). The accuracy of these data has been enhanced by the fact that a long unbroken, annual detailed record of landings by individual vessels at the major New England ports has been available. The figures for 1908 and earlier years, not including 1880, have not been corrected for portions of the catches of some species that were recorded in those early years as product weights of cured fish.

See also general note for series L 224–370.

L **270–271.** Landed catches **of** menhaden and oysters in Middle Atlantic States, **1880–1970.**

Source: See source for series L 262–269.

See also general note for series L 224–370.

L 272–274. Landed catches of menhaden, oysters, and crabs in Chesapeake Bay States, **1880–1970.**

Source: See source for series L 262–269.

See also general note for series L 224–370.

L **275–280.** Landed catches **of** shrimp, menhaden, and mullet in South Atlantic States and **Gulf** States, **1880–1970.**

Source: See source for series L **262–269.**

Historically, these two regions were canvassed for statistics at infrequent intervals, and until recent years most State agencies in these regions maintained no statistical systems. The data on menhaden, however, are more complete because its use for reduction has resulted in the landings being recorded during the more frequent canvasses for manufactured fishery products by the National Marine Fisheries Service and its predecessor agencies.

See also general note for series L **224–370.**

L **281–282.** Landed catches **of** lake trout and whitefish in Lakes Region, **1885–1970.**

Source: Except for **1885,** see source for series L **262–269;** 1885, *Fishery Statistics of the United States,* 1950, Statistical Digest No. **27.**

See also general note for series L **224–370.**

L **283–287.** Landed catches **of** principal species in Pacific Coast States, **1888–1970.**

Source: See source for series L **262–269** except for series L **286** for which—1888–1966, International Pacific Halibut Commission, published in U.S. Bureau of Commercial Fisheries, *Fishing Leaflet* 602, *Revised,* "United States and Canadian Halibut Landings, 1888–1966"; **1967–1970,** International Pacific Halibut Commission, *Annual Report,* 1969 and 1970.

State and Federal agencies in this region, due in part to the consistent support by the fishing industry, have maintained the most continuous and probably the most accurate series of fisheries statistics of any region in the United States.

The landed catches include both those from waters contiguous to the coasts of California, Oregon, and Washington, and waters off foreign shores; tuna from waters off South and Central America; salmon and halibut from waters off Canada. Also, a large proportion of the landed catch of the halibut comes from waters off Alaska.

See also general note for series L **224–370.**

L **288–292.** Landed catches **of** salmon, halibut, and herring in Alaska, **1882–1970.**

Source: Series L **288, 1927–1970,** U.S. National Oceanic and Atmospheric Administration and predecessor agencies, *Fishery Industries of the United States,* annual issues, and *Fishery Statistics of the United States,* annual Statistical Digests. Series L **289,** see source for series L **286.** Series L **290, 1882–1956,** O. E. Sette, *Historical Catch Statistics on Pacific Herring, Clupea pallasi,* **1955,** Fish and Wildlife Service Ocean Research Note **4** (also amendments and O. E. Sette, **1957** addendum). Series L **291–292, 1884–1931,** *Pacific Fisherman,* "Annual Statistical Number **30,"** Miller Freeman Publications, Seattle, January **1932** (copyright, Journal Publishing Co.); **1932–1956,** *Pacific Fisherman,* **"1957** Yearbook Number," January **1957** (copyright, Journal Publishing Co.). Series L **290–292,** 1957–1970, see source for series L 288.

The halibut figures (series L **289)** include catches landed by U.S. vessels in the railhead port of Prince Rupert, Canada, for shipment in bond to the United States, as has also been the practice in the published compilations by Federal fishery agencies.

The major portion of the Alaska herring catch has been used for reduction to meal and oil except during the period **1912** to **1922** when salting and canning predominated. Such direct use as a food fish has since declined and practically disappeared after **1948.** The variety and changing emphasis in the products reported produced each year and the problem of converting such diverse products to a common raw fish value reduced the usefulness of the originally published total catch statistics. These have been revised from time to time (see Sette who appraised the revisions of such workers as Rounsefell up to **1928** and Skud more recently).

See also general note for series L **224–370.**

L **293.** Landed catches **of** tuna in Hawaii, **1946–1970.**

Source: U.S. National Oceanic and Atmospheric Administration and predecessor agencies, *Fishery Statistics of the United States,* annual Statistical Digests.

Statistics were not collected for Hawaii prior to **1946.**

L **294–304.** Per capita consumption **of** fishery products, **1909–1970.**

Source: U.S. National Oceanic and Atmospheric Administration, *Fisheries of the United States,* various issues.

Per capita consumption is based on the consumption of edible fishery products in the United States divided by estimates of the total civilian resident population as of July **1** of each year.

These estimates are from the Bureau of the Census, Current Population Reports, series **P-25.**

L **305–310.** Disposition **of** landed catches, by major product groups, **1921–1970.**

Source: U.S. National Oceanic and Atmospheric Administration, *Fishery Statistics of the United States,* annual Statistical Digests; and *Imports and Exports of Fishery Products, Annual Summary 1970,* p. **8.**

The fresh and frozen catch figures (series L **307)** should be considered only as rough estimates since they were derived as residuals of the total catch figures (series L **305,** same as series L **224)** and the canned, cured, and industrial catch figures (series L 308, L **309,** and L **310).**

Canned catch figures (series L **308)** represent a computed amount of fish or other aquatic organisms that were heat processed in cans. Cured products figures (series L **309)** represent an estimated amount of fish and other living aquatic animals that were dried or dehydrated, salted, smoked, or pickled. Industrial products figures (series L **310)** represent the weights of fish and other aquatic products determined to have been manufactured into fish meal, oil, fish solubles, homogenized condensed fish, shell products, or used as bait or for animal food, and other miscellaneous items.

U.S. production may also be classified according to type of products whether crustacea such as crabs, shrimps, lobsters; mollusks such as oysters, clams, squid; fresh-water organisms; bottom or demersal marine fish; surface or pelagic marine fish; and such miscellaneous products as turtles, seaweeds, and other items, not including whale products. The percentage of total production contributed by the foregoing groups at various times has been as follows:

	1908	*1930*	*1937*	*1945*	*1950*	*1955*
Crustacea	5	6	6	7	3	9
Mollusks	13	7	4	4	4	4
Fresh-water	11	5	4	4	4	5
Marine demersal	21	22	17	23	19	19
Marinepelagic	50	60	69	62	65	63
Miscellaneous	(1)	(1)	(1)	(1)	(1)	(1)

[1] Less than 1 percent.

L **311–318.** Production and imports **of** selected fishery items, **1924–1970.**

Source: Series L **311, 1939–1956,** U.S. Fish and Wildlife Service, *Packaged Fish—1956,* Current Fishery Statistics, No. **1518; 1957–1970,** U.S. National Oceanic and Atmospheric Administration, *Fishery Statistics of the United States,* annual Statistical Digests. Series L **313,** L **315,** and L **317, 1924–1939,** U.S. Bureau of Fisheries, *Fishery Industries of the United States,* annual issues; **1940–1970,** U.S. National Oceanic and Atmospheric Administration, *Fishery Statistics of the United States,* annual Statistical Digests. Series L **312,** L **314,** L **316,** and L **318, 1924–1956,** U.S. Customs Service, unpublished data; **1957–1970,** see source for series L **311.**

The import figures for groundfish fillets and steaks are based on Customs documents and Bureau of the Census data; all other import figures are from census data.

See also general note for series L **224–370.**

L 319-320. Sponge sales at the Tarpon Springs (Fla.) Exchange, **1913-1970.**

Source: 1913–1949, U.S. Fish and Wildlife Service, unpublished data; 1950–1970, U.S. National Oceanic and Atmospheric Administration, *Fishery Statistics of the United Slates,* annual Statistical Digests.

L 321-337. Prices received by fishermen, **1939-1970.**

Source: 1939–1968, U.S. National Oceanic and Atmospheric Administration, *Prices Received by Fishermen,* H.S. No. 12; 1969–1970, *Fishery Statistics of the United States,* annual Statistical Digests.

These data represent prices received by fishermen from processors. The bases of weight measurement in pounds are as follows: Round, whole—flounder, American lobsters, menhaden, ocean perch, salmon (chum, pink, and sockeye), tuna (albacore, bluefin, skipjack, and yellowfin); dressed, scaled and eviscerated, usually with head, tail, and fins removed—salmon (chinook, troll and coho, troll); meat, edible weight—clams, soft, and sea scallops; drawn, eviscerated—cod and haddock.

The points of pricing are as follows: clams, soft and American lobster—Maine; cod, flounder, and haddock—Massachusetts; ocean perch—Maine and Massachusetts; sea scallops—New Bedford, Mass.; and for the other series—no specific point.

L 338-357. Production and value of canned fishery products, **1921-1970.**

Source: 1921–1935, US. Bureau of Fisheries, *Fishery Industries of the United States,* annual issues. U.S. National Oceanic and Atmospheric Administration, 1936–1938 and 1969–1970, *Fishery Statistics of the United States,* annual Statistical Digests; 1939–1968, *Canned Fishery Products, Annual Summary 1970.*

See also general note for series L 224–370.

L 338-339, total, all products, In addition to the nine products for which figures are separately presented (series L 340–357) and which have represented over the period of record from 85 percent to 97 percent of production of all canned fishery products, these totals include very substantial packs of clams and clam products, large and valuable packs of crabs, and small but valuable packs of fish roes and of shrimp and oyster specialty products, and many other less important items. These data are the latest revised figures and all are equated to units of the latest defined standard case for each product. A history of conversion factors that have been used and their present definitions appear in *Fishery Statistics of the United States, 1970,* Statistical Digest No. 64.

L 340-341, Pacific Coast salmon. (Standard case, 48 cans of 16 ounces net weight each.) Includes Alaska salmon (also shown separately, series L 288) which account for the largest proportion of the total. Five species of the genus *Oncorhynchus* are included—sockeye (red), chinook (king), coho (silver), pink, and chum salmon—and also an extremely small proportion of steelhead trout of the genus *Salmo.*

L 342-343, Pacific sardines. (Standard case, 48 cans of 15 ounces net weight each.) The Pacific sardine is also known as the pilchard. Prior to 1937, the magnitude of the pack was determined in part by the proportion of the total catch that was permitted by California State law to be used for reduction to meal and oil. A California State law in 1967 established a two-year moratorium on the taking of sardines in California waters, excepting an allowable 15-percent tolerance for sardines taken incidentally in mixed catches of mackerel. In 1969, the moratorium was continued indefinitely.

L 344-345, Maine sardines. (Standard case, 100 cans 3–3/4 ounces net weight each.) The Maine sardine is also known as the Atlantic sea herring.

L 346-347, tuna. (Standard case, 48 cans of 6, 6½, or 7 ounces net weight per can for flakes or grated, chunks, and solid packs, respectively.) Includes the canned pack of the true tuna species, albacore, yellowfin, bluefin, skipjack, and tonno.

L 348-349, oysters. (Standard case, 48 cans of 4–2/3 ounces drained weight each.)

L 350-351, shrimp. (Standard case, 24 cans of 4½ ounces net weight each.)

L **352-353,** anchovies. (Standard case, 100 cans of 5 ounces net weight each.)

L 354-355, mackerel. (Standard case, 48 cans of 15 ounces net weight each,) The production consists of Jack and Chub (Pacific) mackerel of California.

L 356-357, animal food. (Standard case, 48 cans of 16 ounces net weight each.) Consists largely of pet and animal food derived from groundfish species and parts of other fish unsalable for human use or of species of low market value as human food.

L 358-361. Production of canned tuna, **1926-1970.**

Source: U.S. National Oceanic and Atmospheric Administration and predecessor agencies. Series L **358-359,** and **L 361,** 1926–1938 and 1941–1946, *Fishery Statistics of the United States,* annual Statistical Digests; 1939–1940 .and 1947–1970, *Fisheries of the United States,* various annual issues. Series **L 360,** 1926–1938 and 1941–1948, unpublished data; 1939–1940 and 1949–1970, *Fisheries of the United States.*

Domestically canned tuna from domestic catch, series L 361, includes the pack from U.S. catch landed in Puerto Rico and American Samoa. Domestically canned tuna from frozen imports, series L 360, includes tuna canned in American Samoa from foreign-caught fish.

L 362-368. Production and value of dried fish meal and scrap, acidulated scrap, fish and other marine oils, and imports of fish meal, **1921-1970.**

Source: 1921–1938, U.S. Bureau of Fisheries, *Fishery Industries of the United States,* annual issues; 1939–1970, U.S. National Oceanic and Atmospheric Administration and predecessor agenries, *Fishery Statistics of the United States,* annual Statistical Digests.

In contrast to series L 224, L 244, and others which included only the products of U.S. land-based whaling, series L 362 and L 364 include the meal and oil yields from the United States Antarctica and West Australia factory-ship whaling in 1935–1939.

Since 1941, the acidulated product of the menhaden fishery has been a negligible proportion of the total production of scrap and meal and it is not separated in the recorded statistics of the industry after 1946.

Acidulation of the wet menhaden press cake after removal of the oil was an alternative preservative process to drying. Since it was sometimes carried out as a temporary measure prior to drying at a later and more propitious time, it is probable that some of the tonnage of acidulated scrap may have been subsequently also reported as dried scrap leading to some duplication of reported tonnage in the earlier years.

See also general note for series L 224–370.

L 369. Sealskins obtained from the Pribilof Islands, **1910–1970.**

Source: 1910–1938, U.S. Bureau of Fisheries, *Alaska Fishery and Fur-Seal Industries,* Administrative Reports; 1939–1957, U.S. Fish and Wildlife Service, *Alaska Fishery and Fur-Seal Industries,* Statistical Digest; 1958–1970, U.S. National Oceanic and Atmospheric Administration and predecessor agencies, *Fishery Statistics of the United States,* annual Statistical Digests.

Under the terms of the 1911 and succeeding treaties or agreements with Canada, Japan, and Russia, the take of fur seal on the Pribilof Islands in the Bering Sea has been under the exclusive and direct custodianship of the U.S. Government.

Sealskin figures represent the total take before the partitioning of the yield among the several countries involved. The figures for 1910

and 1911 were pretreaty and represent skins taken directly by the US. Government, as the U.S. lease to the private company that had engaged in the operation since 1867 had expired early in 1910. The 1918 take was the first treaty take out of which Japan and Canada each received a 15-percent share for relinquishing all rights to pelagic sealing in the eastern North Pacific. Russia had not been previously engaged in pelagic sealing. With the abrogation of the treaty by Japan in 1940, Canada's share was increased to 20-percent under the Provisional Fur-Seal Agreement of 1942 as amended.

Management of the fur seal herd has been determined by a policy of taking pelts of those animals that are considered surplus to breeding requirements and that have highest quality skins. These desirable seals are principally the 3- and 4-year-old males. Scientists managing the herd believe that it can be maintained at an optimum level by keeping a male-female ratio which will produce about 500,000 pups each year. The present (1970) 1.5 million animals is large enough to sustain the seal population.

Available knowledge on the total size of the Pribilof Islands fur-seal herds, the high value of the skins and the fact that specified shares (15 percent) of the take were conveyed under treaty to Japan and Canada has ensured the accuracy of the record of annual takes. The U.S.S.R. does not share in the take even though it was a party to the treaty.

See also Fish and Wildlife Service, *A Population Study of the Alaska Fur-Seal Herd*, Special Scientific Report, Wildlife No. 12, 1954, for a history of the sealskin resource, 1786–1950.

L **370.** Land-based production **of** whales, **1912–1970.**

Source: 1912–1957, *Pacific Fisherman*, "Annual Statistical Numbers,'' 1910–1957, formerly Miller Freeman Publications, Seattle (copyright, Journal Publishing Co.); 1958–1970, U.S. National Oceanic and Atmospheric Administration, and predecessor agencies, *Fishery Statistics of the United Slates*, annual Statistical Digests. See also Norway Committee for Whaling Statistics, *International Whaling Statistics*, Nos. 1–15, Oslo, 1930–1941.

Present century participation by the United States in the whaling industry has been relatively inconsequential compared to that of other countries and to the American high-seas whaling of the past century. **It** has been largely restricted to land-based operations chiefly in Alaska and to a lesser extent in Washington, terminating in each in 1939 and 1925, respectively, and to operations in California from time to time for 1918–1970.

In 1969, the International Whaling Commission recommended that all member countries establish quotas for the commercial catch of fin and sei whales because of the danger of extinction. The U.S. quota was set at **44** fin whales and 60 sei whales; no quota was set for sperm whales, the other important whale in the U.S. catch.

Chapter M

Minerals

M 1-12. Summary of mineral operations, **1840-1967.**

Source: Series **M 1-11,** U.S. Bureau of the Census, *Census of Mineral Industries, 1967,* as corrected after publication; series **M 12,** *Census of Mineral Industries, 1963.*

Figures are based on establishment reports for each operation covered in the census. These reports include all of the information shown as well as other related data. The different series are comparable, therefore, for a given year and a given industry. The comparability of figures for various census years, however, is affected somewhat by changes in the specifications for establishments covered. For 1967, excludes all single-unit establishments without paid employees. For 1963, 1958, and 1954 excludes small establishments for which each of the following three items was less than $500 for the entire year: (1) Value of products shipped and services performed for others; (2) expenses for wages, salaries, supplies, minerals received for preparation, fuel, purchased electric energy, contract work, and purchased machinery; and (3) capital expenditures for development and exploration of mineral properties, new construction and major alterations, and new and used machinery and equipment. For 1939 and 1929, in general, small establishments were excluded if each of three similar items amounted to less than $2,500, and, in general, for 1919, if value of products was less than $500 and expenditures for development work less than $5,000. For earlier years, no general size level was specified for the censuses.

M 1, number of establishments. These figures are much less comparable from one year to another than the figures for series M 2–12 since they are greatly influenced by the inclusion or exclusion of very small operations, such as the activity of prospectors, small irregular operations, and oil and gas stripper operations. Many of these were below the census level for inclusion for certain years but were included in other years (see preceding paragraph). In 1963, for mining as a whole, establishments without paid employees accounted for approximately 3 percent of valua added.

M 4, value added in mining. Beginning 1954, represents gross value of shipments plus capital expenditures less cost of supplies, minerals received for preparation, fuel, purchased electric energy, contract work, and purchased machinery. For earlier years, certain data are not available from census reports, but a rough measure is included which represents value of shipments less cost of supplies, minerals received for preparation, fuel, purchased electric energy, and contract work.

M 5, production and development workers. For 1909–1954, the figures represent the average of reported employment for the mid-month pay period for the 12 months of the census year. Beginning 1958, the data represent an average of such figures for a specified month in each quarter of the year.

M 11, capital expenditures. Represents capital expenditures for development and exploration of mineral property and for new and used plant, machinery and equipment.

M 12, aggregate horsepower rating of power equipment. Represents the aggregate horsepower rating of all prime movers and electric motors driven by purchased energy in use or available for use at the end of the census year.

M 13-306. General note.

The principal sources for these series are two publications: *Mineral Resources of the Unifed States,* published annually for 1882–1931; and *Minerals Yearbook,* published annually since 1932–1933. These volumes were prepared and issued by the U.S. Geological Survey from 1882 to 1923 and by the U.S. Bureau of Mines since 1924.

In general, production data from these sources refer to the 50 States, excluding data for U.S. outlying areas. For petroleum and petroleum products, data are included for Alaska beginning 1959 and for Hawaii beginning 1960. Except as noted in the source publications cited, however, data for other commodities have usually been compiled to include Alaska and Hawaii back as far as 1954 when they amounted to only 0.1 percent of the value of total production.

Import figures represent imports for consumption except as noted. However, as the source did not always identify the import figures, particularly for years prior to 1938, it was assumed that the figures were comparable to those identified for other years.

Unless otherwise stated, figures for imports and exports were compiled by the Bureau of Mines (or Geological Surveyj from records of the Bureau of the Census. For foreign trade definitions, see the introduction in U.S. Bureau of the Census, *Foreign Commerce and Navigation of the United States, 1965.*

M 13-37. Value **of** mineral **products,** in current dollars, **1880-1970.**

Source: See general note for series M 13–306, except series M 23, 1954–1969, U.S. Bureau of the Census, *Annual Survey of Manufactures* and 1967 *Census of Manufactures.*

The figures for series M 13, M 14, M 20, and M 30 (the grand total and commodity subtotals) cover the period presented with two overlapping series. One on the so-called "old basis" runs from 1880 through 1924, while the other on the "new basis" is the series as currently compiled and shown for 1925 through 1970. Prior to 1925, an adjustment by Resources for the Future, Inc., Washington, D.C. has been included for iron ore and bauxite which affects series M 13 and M 30.

Minerals Yearbook, 1949, pp. 29–30, indicates the deficiencies in the earlier statistics which the "new basis" of measurement was designed to correct. These deficiencies apply mainly to fuels (series M 14–19), nonmetals (series M 20–29), and metals (series M 30–37), and are described in the text for those series. Another improvement applicable to all statistics on the "new basis" is the correction of the value grand totals and subtotals back through 1925 to exclude some mineral products made from materials of foreign origin.

In addition to the general revision described above which was made in the *Minerals Yearbook, 1949* and *1950,* other less important revisions of the grand totals and subtotals for earlier years are often carried in later editions of the *Minerals Yearbook.* Series M 13, M 14, M 20, and M 30 present the most recently revised totals and subtotals. Since these revisions are often carried in later editions of the *Minerals Yearbook,* without full supporting commodity details, the values shown here for the individual commodities are not always strictly comparable with the totals and subtotals in all years.

In general, a significant factor making for lack of long-run comparability within series, and among different series, is the failure of the basic source to use a consistent stage of production at which to measure value. Value is measured at the mining stage for some commodities and at a stage in the manufacturing process for others for which mine value figures may be difficult to collect (frequently because of the integration of mining and manufacturing production processes). Moreover, the stage at which the value of individual commodities is measured sometimes has changed. Consequently,

the totals and subtotals for any year are to some extent a mixture of values at different stages in the production process and similar totals and subtotals for succeeding years may also represent different mixtures. However, double counting has generally been avoided by including a product at not more than one stage in the production process.

A less significant factor involves geographic coverage. Totals and subtotals for 1925–1953 cover only the 48 States of conterminous United States, but individual commodity figures for 1925–1946 may include production in U.S. outlying areas. For 1954–1970, the totals and subtotals include Alaska and Hawaii; for years prior to 1925, they cover Alaska, Hawaii, Philippine Islands, and Puerto Rico.

As is to be expected in long time series, the completeness of coverage has improved considerably over time. For a discussion dealing with changes in coverage for the early years, see *Mineral Resources of the United States, 1918*, part I, pp. 1a–5a, which contains an historical description of the statistical operations of the Geological Survey, then responsible for such mineral statistics.

For figures which more closely approximate a mine-value basis, see Harold Barger and Sam H. Schurr, *The Mining Industries, 1899–1939; A Study oj Output, Employment and Productivity*, National Bureau of Economic Research, New York, 1944, pp. 305–309. This source shows the estimated mine values for all minerals (in million dollars of approximate value): 1899, $600; 1909, $1,200; 1919, $3,200; 1929, $4,100; and 1937, $3,800.

M 14–19, value of fuels. The individual commodities shown constitute, for practical purposes, all the mineral fuels produced (except uranium for fuels). The figures back to 1925 for total fuels (series M 14) include, in addition, asphalt and related bitumens, carbon dioxide (natural), helium, and peat. These products are closely related to the other minerals included as fuels, and work dealing with them is organized within the several fuels divisions of the Bureau of Mines. Their combined values are too small to affect seriously the total fuels figures.

M **14,** total value of fuels. The most important difference between the "old" and "new" basis series is the inclusion of natural gas as valued at the well in the new series as opposed to natural gas valued at the point of consumption in the old series. In 1925, when the discontinuity occurs, natural gas was not so important, nor was the difference between well value and point of consumption value so great, as to cause a major break in the series (total value of fuels for 1925, on the "old" basis, was $3,059 million). See also text for series M 18.

M 15, bituminous coal and lignite. Represents total value of production, f.o.b. mine. Selling costs are excluded for 1880–1936 and included for 1937–1970, except for 1939 when producers were asked to exclude them but some, in fact, included them. Figures include small quantities of anthracite mined in States other than Pennsylvania.

M **16,** Pennsylvania anthracite. Represents total value of production, f.o.b. mine. Data for 1951–1970 are not strictly comparable with figures for earlier years because they include output of independent operators, formerly classified as "bootleggers" but now operating under legal agreements with the owners of the coal lands. Data for 1941–1950 include some "bootleg" coal purchased by legitimate operators and prepared at their breakers.

M **17,** petroleum. Represents value of crude oil at the well.

M 18, natural gas. Represents total value of "marketed production," i.e., gross withdrawals less repressuring, vented, and wasted. Beginning 1947, transmission losses and storage are included. Value is measured at the well for 1925–1970, and at the point of consumption Prior to 1925. (The value at the point of consumption was $265 million in 1925).

For 1885 to 1890, the value shown is for coal and fuel wood displaced by natural gas rather than the value of gas consumed as actually reported. For example, in 1889, the latter was $11 million.

M **19,** natural-gas liquids. Represents value at the plant and includes natural gasoline, finished gasoline, naphtha, other cycle products, and beginning 1941, liquefied petroleum gases.

M 20, total nonmetals. Figures include value of nonmetals not shown separately. Figures are heavily weighted by the value of products classified as manufactures in U.S. Office of Management and Budget (formerly U.S. Bureau of the Budget), *Standard Industrial Classification Manual*. For example, cement and lime are included instead of their raw material components. Integrated operations make it difficult to obtain a value for the raw materials, which usually are not purchased on the open market, but obtained from associated operations. The value of stone includes an indeterminate amount of manufacturing because many dimension stone quarries manufacture the stone into finished products. The value of salt also includes a substantial amount of manufacturing as defined in the *Standard Industrial Classification Manual*.

Beginning 1947, the totals for nonmetals include the value of raw clay alone, but for prior years the value of clay manufactures (mainly heavy clay products, such as brick, tile, etc.) for practically the entire period. The exact definition of clay value has changed several times during the long period covered. See text for series M 22–23.

Series M 20 has a number of discontinuities. These include changes in the method of valuing clay and inadequate coverage of sand and gravel before 1905 and of clay products before 1894. Other sources of noncomparability are also present. For these reasons and because of the heavy influence of manufacturing as defined in the *Standard Industrial Classification Manual* in the total value, this series should be used with great care. By way of comparison, the mine value subtotals for nonmetals as estimated in Barger and Schurr (see text for series M 13–27) are (in million dollars of approximate value): 1899, $60; 1905, $125; 1919, $240; 1929, $500; and 1937, $390.

M **21,** cement. Valuation is f.o.b. mill excluding the cost of the container. Included are portland, natural, masonry-natural, slag (formerly referred to as puzzolan), and hydraulic lime cements. (See also text for series M 188 regarding coverage of prepared masonry cement and change in 1955.) For 1912–1970, figures represent total value of shipments; for 1880–1911, figures are for value of produetion. For 1880–1890, figures are estimates. Early decade valuation estimates not shown in the table include: 1818–1829, $0.2 million; 1830–1839, $1 million; 1840–1849, $4 million; 1850–1859, $9 million; 1860–1869, $14 million; and 1870–1879, $19 million.

M 22–23, clay. Raw clay and clay products are both shown because total nonmetals (series M 20) includes one or the other, or parts of both, at different times. Series M 20 includes: prior to 1936, the value of all clay products (series M 23) only; for 1936–1944, the value of clay products, other than pottery and refractories (series M 23) and the value of raw clay sold (1936–1941) and sold or shipped by producers (1942–1944) as shown in series M 22; for 1945–1946, the value of clay products, other than pottery and refractories (series M 23) and the value of raw clay sold or used, except for raw clay used in the products in series M 23; for 1547–1970, the value of raw clay sold or used by producers (series M 22 except clay used in cement manufacture).

Prior to 1944, raw clay (series M 22) was mainly restricted to "merchant clay" marketed as raw clay, excluding the very great amounts of clay converted into brick and other products before sale.

Series M 23, prior to 1936, represents the total value of clay products. Beginning 1936, the figures represent the value of heavy clay products other than potteries and refractories.

M 24, lime. Represents the selling value, f.o.b. plant, excluding cost of container. Data for 1953–1970 are not strictly comparable with those for earlier years. Prior to 1953, the series has only partial coverage of captive plants; beginning 1953, coverage is essentially complete for both open-market and captive tonnage production. *Mineral Resources, 1914*, vol. II, p. 363, considers the series reliable only from 1894 on, stating that: "Although the statistics of the production of lime collected by the U.S. Geological Survey date, in one form or another, back to 1880, reliable figures showing the extent

and growth of the industry have been available only since 1894 ... these early figures (prior to 1894) are much too large; but there is no adequate means of explaining the discrepancy. The statistics are sufficiently consistent to indicate a steady growth in quantity and, with a few exceptions, in value for 1880–1888, but in other respects they cannot be considered reliable."

M 25, sand and gravel. Represents the value of sand and gravel at the pit (or source). This is the total value of sand and gravel sold or used by the producer. Although the terms "sales" and "production" are used interchangeably, stocks remain small and relatively constant from year to year. Coverage includes commercial and noncommercial (government and contractor) operations. Values of industrial sand, unground and ground, are also included. Prior to 1954, ground industrial sand was included elsewhere in value of mineral products. Coverage of gravel was incomplete for 1902–1904.

M 26, stone, including slate. Stone sold or used by producers is valued f.o.b. quarries or mills. Slate is valued f.o.b. quarry or nearest point of shipment. Since manufacturing operations are often integrated with dimension stone quarries, the figures include a sizable but indeterminate value for manufacturing. Stone coverage includes granite, basalt and related rocks (traprock), marble, limestone, sandstone, and other stone. Data for 1954–1970 include ground sandstone, quartz, and quartzite used for abrasives and other purposes (formerly included elsewhere in value of nonmetals), stone for cement and lime (value excluded from nonmetals total), and shell (not formerly covered by Bureau of Mines). Value of these three categories totaled $105 million in 1954. Both dimension stone and nondimension (crushed) stone are included. Slate includes roofing slate, millstock, flagstones, granules, flour, and other. Data for 1880–1888 are incomplete, representing building stone only.

M 27, phosphate rock. Represents the value f.o.b. mine. For 1950–1970, figures refer to marketable production; for earlier years, to phosphate rock sold or used.

M 28, salt. Represents the value f.o.b. mine or refinery of common salt sold or used by producers, excluding cost of cooperage or container. Included are dry salt, both evaporated (manufactured) and rock, and also salt in brine. For 1880–1892, many manufacturers included the value of the container in the value reported.

M 29, sulfur. Represents the total value of shipments. Data for 1901–1903 included pyrites. Frasch process mine output plus other mine output is included since 1945 and recovered elemental sulfur since 1950.

M 30, total metals. Includes the value of some metals not shown separately. Adjustment in figures for years prior to 1926 have been made by Resources for the Future, Inc., Washington, D.C. and are included here. Prior to 1925, *Minerals Yearbook* figures include the value of pig iron and aluminum, both manufactured products, whereas the figures shown here include the value of iron ore and bauxite, the products of mines. Other relatively minor changes involving the substitution of mine values for manufactured values were made in the 1949 revision of the total metals figures for years after 1924, and some duplication within the totals for metals was eliminated. Because of the difficulties involved, these changes have not been applied to the pre-1925 figures shown here. However, since the iron ore and bauxite substitutions constitute the major elements in the revision, there is no major discontinuity between the pre- and post-1925 total metals figures.

The figures for gold, silver, copper, lead, and zinc for all years are based on the smelter or refinery value of the metals, not their value at the mine. The practice of valuing these products at the manufactured stage was not altered by the 1949 revision, because the complexity of their ores makes mine values difficult to derive. However, effective with the 1949 revision, the total value for each of these metals was derived by applying the average selling price of the refined metal to the recoverable mine production.

By way of comparison, the mine values for total metals as estimated in Barger and Schurr (cited in text for series M 13–37) for selected years are (in million dollars of approximate value): 1899, $189; 1909, $329; 1919, $540; 1929, $627; and 1937, $642.

M 31, iron ore. Represents total value of ore shipments. Figures for 1881, 1890, and 1891 were estimated by multiplying the arithmetic mean of the average value of the preceding year and the following year by the quantity of output for the year to be estimated. For 1906–1970, the data exclude ore containing 5 percent or more manganese, and for 1916–1941, ore for paint.

M 32, copper. For 1880–1946, figures represent the value of the smelter output from domestic ores. For 1908–1916, figures are as valued at New York City. For 1947–1970, figures represent the average price of refined copper multiplied by mine production of recoverable copper.

M 33, lead. For 1880–1946, figures represent value of refinery output from domestic ores. For 1908–1916, figures are as valued at New York City. For 1947–1970, figures represent the average price of primary refined lead multiplied by the mine production of recoverable lead.

M 34, zinc. For 1880–1946, figures represent the value of smelter output from domestic ores. For 1908–1914, figures are based on the average St. Louis quotation; for 1915–1923, on average selling price for all grades. For 1947–1970, figures represent the average price of the smelter product multiplied by the recoverable mine output.

M 35, gold. For 1880–1946, figures represent refinery or mint output multiplied by the official price. The official price of gold was $35 from January 1934 to March 15, 1968; prior to then it was $20.67, although the price of gold was unsettled in 1933 because the United States went off the gold standard in April of that year. For 1947–1970, figures represent the recoverable content of ore (mine output) multiplied by the official price per fine ounce until March 15, 1968, and Engelhard selling quotations thereafter.

M **36,** silver. For 1880–1946, figures represent refinery or mint output multiplied by the price. For 1947–1970, figures represent the recoverable ore content multiplied by the New York market price of the refined metal.

M 37, molybdenum. Figures represent the value of shipments of molybdenum concentrates.

M 38–53. Value of mineral production, imports, exports, and consumption in constant **(1967)** dollars, **1900–1969.**

Source: U.S. Bureau of the Census and U.S. Bureau of Mines, *Raw Materials in the United States Economy: 1900–1969* (Working Paper No. 35).

The figures were obtained by multiplying the physical quantity of each raw material for a given year by the average unit value of the material for 1967. For materials produced domestically, the unit value weights are average values at the mine, approximately as indicated by the 1967 Census of Mineral Industries. For materials not produced in the United States in the 1967 period, average unit value of imports was generally used. Production figures include approximately 90 mineral products which account for over 99 percent of the total value of mineral output as measured in the 1967 Census of Mineral Industries; production represents primary production only. Import and export figures include not only primary materials but also estimates of the raw material equivalents of semi-fabricated and fabricated products, in order to approximate the raw materials required for end-use products consumed in the United States. Thus, the mineral equivalents of the foreign trade in paints, other chemicals, and machinery were computed and added to the imports and exports of crude minerals. Such estimates affected most significantly the results for certain metallic minerals, particularly iron ore, copper ore, and bauxite imports and exports, which were influenced by the estimated metal content of such things as machinery and vehicles. Consumption is computed as production plus imports minus exports plus net decrease in stocks. More detailed figures are shown in the source; for example, separate series for "iron and ferroalloys," "other metals, except gold," "construction materials," and "other non-

metallic minerals (except fuels)," and for selected individual commodities. Data for Alaska and Hawaii are included for all years.

M 54–67. Indexes **of** physical volume **of** mineral production (Bureau **of** Mines), 1880–1970.

Source: U.S. Bureau of Mines, *Minerals Yearbook,* various issues.

These index numbers constitute an updating of the index numbers originally prepared by *Y*. S. Leong, "Index of the Physical Volume Production of Minerals, 1880–1948," *Journal of the American Statistical Association,* March 1950. Subsequently, Leong made revisions in his index for 1930–1948 to take account of a new natural-gas production series. Using essentially the same methods, the Bureau of Mines has brought the indexes up to date, and has converted the entire index for later years to a 1967 base. Leong included 63 series in his index, representing 98 percent of the value of all minerals produced in the United States in the base period 1935–39. The number of series is smaller in the earlier years of the index partly because new minerals came into production during the long period covered, and partly because data for minerals in production were sometimes not available in the earlier years. Estimates were used in some cases when actual production data were not available. Over the long period covered, the indexes were constructed by linking seven overlapping segments with seven different sets of value weights (value at the mine, actual or estimated). The weighting periods used were 1889–91 (for 1880–1903); 1909–13 (for 1897–1920); 1923–25 (for 1917–1939); 1935–39 (for 1929–1948); 1947–49 (for 1941–1956); 1957–59 (for 1952–1964); and 1967 (for 1962–1970). The separate segments of the indexes were spliced to form continuous series covering the entire period by selecting a particular year as the splicing origin and deriving averages of the two segments for a 3- or 5-year period centered on the splicing origin.

M 68–71. Indexes **of** mineral production (Federal Reserve Board), 1919–1970.

Source: Board of Governors of the Federal Reserve System, *Federal Reserve Bulletin,* various issues.

These indexes are available monthly as well as annually. The most recent revision of the index is explained in the July 1971 issue of the *Bulletin* and the previous revision is explained in the October 1962 issue. The latest revision introduced 1967 as a comparison base with 1967 value-added weights.

In this latest revision, stone and earth minerals have been divided into two component parts representing first *Standard Industrial Classification Manual* (see general note for series P 1–374) groups 141, 2, 4 and secondly groups 145, 7–9 so that the former series goes into the products group and the latter into the materials group. Also, crude oil production is now represented by three geographic areas instead of a single series for the United States. Although the revision covers only the years since 1954, the Federal Reserve Board states that with respect to the total minerals index, the "continuity of measurement back to 1919 has been preserved."

The latest revision of the index uses different value-added weights and comparison base years for each benchmark year and the years following the benchmark; 1954 through 1957, 1954 weights; 1958 through 1962, 1958 weights; 1963 through 1966, 1963 weights; and 1967 on, 1967 weights. For the period prior to 1954, 1947 through 1953, 1947 weights are used and 1939 through 1946, 1939 weights. The weight years for the period 1919 through 1938 were unchanged from the old index. Total mining indexes prior to 1967 were linked to the 1967 weighted aggregates and converted to the new 1967 comparison base.

M 72–75. Indexes **of** mineral production (NBER), 1899–1939.

Source: Harold Barger and Sam H. Schurr, *The Mining Industries, 1899–1939: A Study of Output, Employment and Productivity,* National Bureau of Economic Research, New York, 1944, pp. 354–355 (COPYright).

These indexes were derived by combining the physical quantities of different products with unit mine values serving as weights. See the source, p. 272, for a technical description of the procedures used to construct these indexes.

The fuels index (series M 73) includes Pennsylvania anthracite, bituminous coal, petroleum, natural gas, and natural gasoline.

The nonmetals index (series M 74) includes asbestos, asphalt, barite, borates, bromine, fluorspar, tripoli, garnet, pumice, ground sand, sand, gravel, sodium salts, calcium chloride, abrasive sandstone, clay, fuller's earth, stone (dimension and nondimension), talc, gypsum, pyrites, sulfur, mica, potash, magnesite, other magnesium compounds, graphite, feldspar, and phosphate rock.

The metals index (series M 75) includes gold, silver, copper, lead, zinc, iron ore, manganese, tungsten, molybdenum, mercury, and bauxite.

M 76–92. General note.

These series are expressed in terms of British thermal units in order to have a common denominator. A British thermal unit is "the quantity of heat required to raise the temperature of one pound of water 1°F. at or near its point of maximum density."

M 76. Total production of mineral energy fuels, in B.t.u.'s, 1800–1970.

Source: This series is the sum of the figures for series M 77–80.

Totals have been derived for only the mineral fuels because of alternative possible conversion factors to apply to hydroelectricity for comparability with the other energy sources.

M 77. Production of bituminous coal, in B.t.u.'s, 1800–1970.

Source: 1800–1849, series M 93 converted to B.t.u.'s at the same rate as data for more recent years; 1850–1885, Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1890–1895, converted to B.t.u.'s from physical quantities shown in successive volumes of U.S. Bureau of Mines, *Mineral Resources of the United States* and *Minerals Yearbook;* 1900–1970, *Minerals Yearbook,* annual volumes.

The B.t.u. equivalent used as a conversion factor for the data through 1954 is 13,100 B.t.u.'s per pound of coal. In recent years this heat value has not been representative of the average unit heat value of the total annual coal supply because of the large annual increases in utilization of coal of lower heat values by the electric utility industry. In 1970, the Bureau of Mines established weighted average B.t.u. values of bituminous coal and lignite produced and consumed in the United States based on known and estimated B.t.u. values of coal shipments to each major consuming sector for 1955–1970 as follows:

Year	Annual average British thermal units (B.t.u.'s) per pound[1]	
1970	12,440	12,290
1969	12,450	12 330
1968	12,580	12'430
1967	12,580	12'470
1966	12,650	12,'550
1965	12,710	12,610
1964	12,750	12 640
1963	12,760	12'650
1962	12,790	12'670
1961	12,790	12,'690
1960	12,880	12,740
1959	12,840	12,740
1958	12,990	12,770
1957	12,990	12,860
1956	12,990	12,870
1955	13,000	12,920

[1] The averages for U.S. consumption exclude shipments overseas and to Canada, the preponderance of which is of high B.t.u. value metallurgical coal, thus accounting for the difference in values between total production and domestic consumption.

Source: Dept. of the Interior, ***Minerals Yearbook,* 1970,** Bituminous and Lignite chapter.

Production statistics for bituminous coal include lignite; they cover Alaska for all years.

M 78. Production of Pennsylvania anthracite, in B.t.u.'s, 1810–1970.

Source: See source for series M 77, except 1808–1849, based on series M 123.

The B.t.u. equivalent used as a conversion factor is an average used by the Bureau of Mines, 12,700 B.t.u.'s per pound of coal.

M 79. Production of crude oil, in B.t.u.'s, 1860–1970.

Source: 1860–1895, converted to B.t.u.'s from physical quantities shown in successive volumes of US. Bureau of Mines, *Mineral Resources of the United States* and *Minerals Yearbook;* 1900–1970, *Minerals Yearbook,* annual volumes.

The B.t.u. equivalent used as a conversion factor through 1954 is 5,800,000 B.t.u.'s per barrel. Since 1955, B.t.u. value for crude oil is a weighted average based on average B.t.u. value of total output of petroleum products (including refinery fuel and losses) adjusted to exclude natural gas liquids inputs and their implicitly derived values. The weighted average B.t.u. values per barrel are: 1955, 5,814,200; 1956, 5,862,400; 1957, 5,864,000; 1958, 5,779,300; 1959, 5,695,000; 1960, 5,695,000; 1961, 5,792,000; 1962, 5,790,000; 1963, 5,718,300; 1964, 5,630,300; 1965, 5,592,300; 1966, 5,589,900; 1967, 5,628,540; 1968, 5,585,010; 1969, 5,601,070; and 1970, 5,620,900. Figures include commingled condensate.

See text for series M 86–87 for B.t.u. conversion factors for petroleum products.

M 80. Production of natural gas, wet, in B.t.u.'s, 1885–1970.

Source: See general note for series M 13–306.

"Natural gas, wet" refers to natural gas prior to processing at natural-gas liquid plants. Figures for 1920–1970 are termed "marketed production," and comprise gas sold or consumed by producers, including losses in transmission, amounts added to storage, and increases in gas in pipelines. Gas vented and wasted and used in repressuring is excluded. Data prior to 1920 are not strictly comparable with those for later years. Apparently, for the earlier period, neither net storage change nor transmission loss was included.

Total production, before subtraction to obtain marketed production, has been converted through 1954, at the rate of 1,075 B.t.u.'s per cubic foot. To obtain marketed production, the amounts repressured, vented, and wasted have been converted at 1,035 B.t.u.'s per cubic foot and subtracted from the B.t.u. value of total production. The new basis consists of the dry natural gas production which excludes gas used for repressuring, vented, or flared multiplied by the following B.t.u. values per cubic foot: 1,035 for 1955–1964; 1,032 for 1965–1968; and 1,031 for 1969–1970, to which is added the computed energy equivalent of the heat value of natural gas liquids production.

Comparability problems arise prior to 1900 because the figures for the very early period are based on the estimated quantity of coal and fuel wood displaced, and are not measures of gas produced.

M 81. Electricity produced from waterpower, at prevailing central station equivalent, in B.t.u.'s, 1900–1970.

Source: U.S. Bureau of Mines, *Minerals Yearbook,* annual volumes.

Figures include installations owned by manufacturing plants and mines, as well as government- and privately-owned public utilities. The fuel equivalent of waterpower is calculated from the kilowatt-hours of power produced whenever this figure is available, as it is for all public utility plants since 1919. Otherwise, the fuel equivalent is calculated from the reported horsepower of installed water wheels, assuming a capacity factor of 20 percent for factories and mines and 40 percent for public utilities. In converting waterpower to its equivalent of fuel required to generate the same power, the prevailing or average performance of all fuel-burning central electric stations for each year in question has been used through 1946. This has dropped from 6.85 pounds of coal per kilowatt-hour in 1900 to 1.29 in 1946. Beginning with 1947, waterpower outputs are converted to theoretical energy inputs calculated from national average heat rates for fossil-fueled steam-electric plants for each year in question. The heat rates for fossil-fueled steam-electric plants are published in the Federal Power Commission's annual supplement to *Steam-Electric Plant Construction Cost and Annual Production Expenses.*

M 82. Electricity produced from waterpower, at direct calorific equivalent, in B.t.u.'s, 1890–1970.

Source: Converted at the rate of 3,412 B.t.u.'s per kilowatt-hour, direct calorific equivalent of electricity, from successive volumes of U.S. Bureau of Mines, *Mineral Resources of the United States* and *Minerals Yearbook.* This represents the same basic production series as series M 81.

M 83–92. General note.

All of the consumption figures since 1920, except series M 91 and M 92, are Bureau of Mines calculated consumption estimates. The Bureau generally defines calculated consumption as production plus imports (including shipments to noncontiguous territories) minus exports, plus or minus net change in stocks. Only in the case of bituminous coal since 1933 has the Bureau derived consumption by adding together known consumption by use. (See also text for series M 113–121.) All the consumption estimates prepared by Resources for the Future, Inc., Washington, D.C., have also been derived in accordance with the above definition except for series M 92, fuel wood consumption, which has been estimated directly.

M 83. Calculated consumption **of** total mineral energy fuels, in B.t.u.'s, 1850–1970.

Source: This series is the sum of series M 84–89.

See also text for series M 76.

M 84–85. Calculated consumption of bituminous coal and Pennsylvania anthracite, in B.t.u.'s, 1850–1970.

Source: 1850–1919, Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1920–1970, U.S. Bureau of Mines, *Minerals Yearbook,* annual volumes.

Bituminous coal consumption for 1850–1932 represents production plus imports, minus exports, plus or minus net change in stocks. That method of derivation ignores variables such as stocks at lake and tidewater docks, stocks at other intermediate storage piles between mine and consumers, and coal in transit. For 1933–1970, consumption represents the addition of known consumption by use.

See also text for series M 77 and M 78, and general note for series M 83–92.

M 86–87. Calculated consumption of crude petroleum and petroleum products, net imports, in B.t.u.'s, 1860–1970.

Source: 1860–1919, Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1920–1970, U.S. Bureau of Mines, *Minerals Yearbook,* annual volumes.

Net imports of petroleum products equals total imports minus total exports, a negative figure signifying an export surplus for that year. Series M 87 is a composite series which has been converted at the following standard Bureau of Mines factors: Gasoline and special naphtha, 5,248,000 B.t.u.'s per barrel; kerosene, 5,670,000; jet fuel, naphtha-type, 5,355,000; jet fuel, kerosene-type, 5,670,000; distillate fuel oil, 5,825,000; residual fuel oil, 6,287,000; wax, 5,537,280; lubricants, 6,064,800; asphalt, 6,636,000; petroleum coke, 6,024,000; still gas, 6,000,000; and miscellaneous petroleum products, 5,796,000.

For 1860–1919, series M 86 and 87 were combined and converted at varying rates at different times depending upon the relative im-

portance of Pennsylvania grade, which has a lower B.t.u. content compared to other grades. From 1958–1970, series M 87 includes imports, exports, processing gains, and stock change.

See also text for series M 79.

M 88. Calculated consumption of natural gas, dry, in B.t.u.'s, 1885–1970.

Source: 1885–1919, Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1920–1970, U.S. Bureau of Mines, *Minerals Yearbook*, annual volumes.

Figures were converted at the following B.t.u.'s per cubic foot: 1,035 through 1964; 1,032 for 1965–1968; and 1,031 in 1969 and 1970. Processing to recover natural gas liquids accounts for the lower B.t.u. content of the gas as compared with series M 80, "natural gas, wet." Consumption for 1920–1970 differs from "marketed production" by net change in foreign trade, net change in storage, and extraction loss, but includes losses in transmission. For 1885–1919, consumption is defined as total production (see text for series M 80) plus imports, minus exports.

M 89. Calculated consumption of natural-gas liquids, in B.t.u.'s, 1911–1970.

Source: 1911–1919, Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1920–1970, U.S. Bureau of Mines, *Minerals Yearbook*, annual volumes.

For 1964 and prior years, a weighted average B.t.u. based on production is used, derived by converting natural gasoline and cycle products at 110,000 B.t.u.'s per gallon and LP-gas, including ethane, at 95,500 B.t.u.'s per gallon. After 1964, the ethane production was converted separately at 73,390 B.t.u.'s per gallon, but the same factors were used for other products.

M 90. Calculated consumption of electricity from waterpower, at prevailing central station equivalent, in B.t.u.'s, 1890–1970.

Source: 1890–1919, Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1920–1970, U.S. Bureau of Mines, *Minerals Yearbook*, annual volumes.

Consumption differs from production by the quantity of imports. In the early years imports drop to zero.

See also text for series M 81.

M 91. Calculated consumption of electricity from waterpower, at direct calorific equivalent, in B.t.u.'s, 1890–1970.

Source: 1890–1919, in kilowatt-hours in Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1920–1970, in kilowatt-hours in successive volumes of *Minerals Yearbook*. Entire series converted at the rate of 3,412 B.t.u.'s per kilowatt-hour, direct calorific equivalent of electricity.

This series represents the same basic consumption series as series M 90.

M 92. Calculated consumption of fuel wood, in B.t.u.'s, 1850–1970.

Source: 1800–1945, Resources for the Future, Inc., Washington, D.C., *Energy in the American Economy* (copyright); 1946–1970, based on U.S. Forest Service data as used in U.S. Bureau of the Census and U.S. Bureau of Mines Working Paper No. 35, *Raw Materials in the United States Economy: 1900–1969*.

The following conversion factors were used: 1850–1895, 20,960,000 B.t.u.'s per cord; 1900, 20,154,000 B.t.u.'s per cord; and 1901–1970, 19,407,000 B.t.u.'s per cord. These conversion factors were derived from the following fuel equivalents: prior to 1900, 1.25 cords of wood equals 1 ton of bituminous coal; in 1900, 1.30 cords of wood equals 1 ton of bituminous coal; and after 1900, because of the larger proportion of soft wood used, 1.35 cords of wood equals 1 ton of bituminous coal (J. F. Dewhurst and Associates, *America's Needs and Resources*, New York, 1955, p. 1108).

M 93–106. General note.

Coverage of bituminous coal by the Bureau of Mines includes all subbituminous coal and lignite, and anthracite and semianthracite produced outside of Pennsylvania. These series exclude Pennsylvania anthracite and, for 1955–1970, Texas lignite. In 1970, total production of lignite, except Texas, was 6.0 million of the total bituminous coal production of 602.9 million short tons. Production of small mines having an output of less than 1,000 short tons per year is not included. For all Bureau of Mines series shown here, data on Alaska are included. (In 1970, Alaskan production totaled 549,473 short tons.)

M 93. Bituminous coal, total production, 1800–1970.

Source: 1800–1885, H. N. Eavenson, *The First Century and a Quarter of American Coal Industry*, Pittsburgh, 1942; pp. 426–434; 1886–1970, see general note, series M 13–306.

Bureau of Mines production data are based on detailed annual reports furnished by producers. Output not directly reported by producers, Primarily that of the small mines, is obtained with some accuracy from State mine departments or railroad carloadings.

Beginning 1951, series M 94 and M 95 do not add to series M 93 because auger production is included in series M 93.

Prior to 1886, production figures shown are those as derived by Eavenson and considered superior to the early Geological Survey figures, which appear in *Mineral Resources of the United States*. Prior to 1880, when the Geological Survey began its annual report system, Survey estimates of production came from the "decennial census, supplemented by records from State and trade sources. In the absence of other information, estimates were made for the intercensus years to round out the totals" (*Mineral Resources of the United States, 1923*, vol. II, p. 544). In reference to census data for these early years, Eavenson states: "The early census returns about coal began in 1830, and were admittedly incomplete; the next two census results are given in value and not in tons produced, and the first really good figures began in 1880" (Eavenson, cited above, p. xiii). Eavenson's estimates were made on an individual State basis and were derived from State, county, newspaper, census, and any other documented records available.

M 94–95. Bituminous coal, underground and strip production, 1914–1970.

Source: See general note for series M 13–306.

For 1914–1942, strip pit coverage includes power strip pits proper but excludes horse stripping operations and mines combining stripping and underground in the same operation. For 1943–1970, coverage includes all strip mines.

M 96–98. Bituminous coal, average value, f.o.b. mine, 1880–1970.

Source: See general note for series M 13–306.

Figures represent value received at the mines f.o.b. cars. For 1880–1936, figures exclude selling expenses; for 1937–1970, they include them. However, for 1939, *Minerals Yearbook, 1946*, states that "producers were asked to exclude ... [them] in reporting value, but a number of them included such costs" (p. 299).

Mineral Resources of the United States, 1923, vol. II, discusses at length the problem of valuation of coal not sold but used by the producer. "Coal used at the mine, coal coked by the producing company, and coal used in some other industry by that company ... is not sold, and the value placed upon it is either an estimate or the amount at which it is carried on the company's books. Either value is presumably the amount the coal would have brought if it had been sold or the amount other fuel ... would have cost if it had been purchased. In other words, the values given represent returns to the operators for coal sold plus the estimated value of coal not sold. The value thus fixed is more or less arbitrary and does not necessarily represent the current prices for coal sold commercially" (pp. 615–616).

For 1915–1942, the average value for strip mines represents power strip pits proper and excludes horse stripping operations and mines combining stripping and underground in the same operation. For 1943–1970, coverage includes all strip mines.

M 99. Bituminous coal, railroad freight charges per **short** ton, **1923–1970.**

Source: See general note for series M 13–306.

This is an Interstate Commerce Commission series reproduced in the Bureau of Mines publications and more exactly defined as the "average revenue received by Class I steam railroads per net ton of revenue bituminous coal originated, as reported to the Interstate Commerce Commission" *(Minerals Yearbook, 1937,* p. 803).

M 100–101. Bituminous coal, foreign trade, **1867–1970.**

Source: See general note for series M 13–306.

Figures for 1867–1885 and 1890–1914 are for fiscal years ending June 30; all other figures presumably represent calendar years. Figures for 1867–1889 were converted from long to short tons to form a continuously comparable series.

M 102. Bituminous coal, stocks, **1916–1970.**

Source: See general note for series M 13–306.

For 1916–1932, figures were labeled "consumers' stocks"; for 1933–1970, "end-of-year stocks at industrial consumer and retail yards." Figures for 1916–1929 were estimated, mainly from data compiled from a list of 5,000 consumers whose stocks in 1918 bore a known relation to total stocks. *(Mineral Resources of the United States,* 1929, vol. 11, pp. 778–779.)

M 103. Bituminous coal, number **of** mines, **1895–1970.**

Source: See general note for series M 13–306.

Figures include only mines producing 1,000 tons per year and over. Some data for smaller mines based on incomplete information are available, however (see *Minerals Yearbook, 1945,* p. 906).

The figure for 1954 may not be strictly comparable with those for other years. In 1954, the Bureau of Mines cooperated with the Bureau of the Census in the canvass for such information, and Census standards were used. *Minerals Yearbook, 1954,* vol. 11, states that "The Bureau of the Census defined a mine as 'a working or group of workings at a given locality in which operations are conducted as a unit or are unified by common management or joint handling of some part of the mining or preparation process. Individual shafts, openings, or sites should not necessarily be considered as individual mines.' The Bureau of Mines has considered individual shafts, openings, or sites as individual 'mines'" (p. 27).

M 104. Bituminous coal, mechanically cleaned, **1906–1970.**

Source: See general note for series M 13–306.

For 1927–1970, figures include coal cleaned at central washeries operated by consumers in Colorado and Pennsylvania. Although pneumatic cleaning began in 1919, no data were available; therefore, such cleaning is not included until 1924. Tonnage so cleaned, however, was small during this period.

M 105. Bituminous coal, mechanically cut underground, **1891–1970.**

Source: See general note for series M 13–306.

M 106. Bituminous coal, mechanically loaded underground, **1923–1970.**

Source: See general note for series M 13–306.

Data for 1923–1926 exclude tonnage handled by conveyors.

M 107–111. Bituminous coal, employment, **1890–1970.**

Source: See general note for series M 13–306.

Active period averages exclude periods when the mine is closed and not in operation. The Bureau of Mines publishes two sets of employment statistics—one in conjunction with the Bureau's injury statistics, the other in conjunction with the Bureau's commodity statistics. The two sets have not always agreed because of somewhat different coverage. All employment figures published here are from the bituminous coal chapter of the *Minerals Yearbook* and *Mineral Resources of the United States* (not those associated with the Bureau's injury reports). However, data on the number of men employed in 1911 are from a special inquiry made by the Bureau of Mines in connection with its accident statistics. Component figures for 1911 will not add to the total because the Bureau of Mines has revised the figure for total employment, but not the component figures.

Employment data for 1946–1970 are not strictly comparable with figures for earlier years. *Minerals Yearbook, 1953,* vol. II, p. 49, describes this change as follows: "Beginning with 1946, the figures on employment represent the average number of men working daily. Each mine is asked to report the total number of man-shifts worked during the year and the number of calendar days the mine was active during the year. The total man-shifts are divided by the total days the mine was active to determine the average number of men working daily. Before 1946 each mine was asked to report the average number of men on the rolls per pay period and number of days the mine worked. In this instance men employed were multiplied by number of days to determine total man-shifts .... Sample tests indicate that the two sets of figures, however, are reasonably comparable. .."

For 1931–1953, figures for all other surface workers on active days (series M 110) include all surface employees at underground, 'strip, and auger mines other than those actually employed in the mining operation proper. Beginning 1954, figures for series M 110 are for auger mining only.

Although data on average hours worked per day are not shown, nominal hours of work are available for most years in the sources cited above.

M 112. Bituminous coal, man-days idle because **of** strikes, **1899–1970.**

Source: 1899–1926, U.S. Bureau of Mines, *Mineral Resources of the United States,* annual volumes; 1927–1970, U.S. Bureau of Labor Statistics, unpublished data.

Data are believed to be substantially consistent although two different sources are used. (The Bureau of Mines figure for 1927 is 26,516,000 man-days.)

In 1943, the Bureau of Labor Statistics "established a cooperative arrangement with the Solid Fuels Administration which resulted in the receipt of additional strike leads. When this latter agency went out of existence, cooperative arrangements were made with coal associations and companies. Prior to 1943, undoubtedly many of the small, short work stoppages went unnoticed as they are seldom recorded by the press, but the number of workers and idleness in these stoppages is undoubtedly small." *(Work Stoppages, Bituminous Coal Mining Industry,* Report No. 95, August 1955, p. 7.)

"Memorial" stoppages which occurred in 1947 and 1952 are not included. For some early years (1899, 1901, 1903, 1907, and 1908), figures may include some anthracite since separation of the data was not possible.

M 113–121. Bituminous coal, domestic consumption by consumer class, **1917–1970.**

Source: See general note for series M 13–306.

Data prior to 1933 may not be strictly comparable with those for later years because of revisions in series M 117–121. For a description of these revisions, see *Minerals Yearbook,* 1957, vol. II, pp. 120–121, where the revisions for 1933–1956 were first published.

M 113, total consumption. Presumably for 1917–1932, consump-

tion was estimated through the formula of production plus imports, minus exports, plus or minus net change in stocks, rather than through the addition of known consumption by consumer class. However, for these years, components still add to the total consumption shown since the "all other uses" classification (series M 117–120) was obtained by subtracting the known consumption items from the total consumption estimate.

For 1933–1970, data are described by the Bureau of Mines as approximating total consumption. The Bureau states that any attempt to estimate total consumption of bituminous through the formula of production plus imports, minus exports, plus or minus net change in stocks, omits important items such as stocks at lake and tidewater docks, stocks at other intermediate storage piles between mines and consumers, and coal in transit, since these items are not included in the stock figures. Therefore, total consumption is estimated through the addition of known consumption by consumer class.

M 114, coal consumed by electric power utilities. For 1917–1932, the series is a Geological Survey series and includes a small amount of anthracite (the Geological Survey figure for 1933 is 30,575,000 short tons); data for 1917 and 1918 were estimated from the 1917 Census of Electrical Industries. For 1933–1970,the series is a Federal Power Commission series, and represents the latest available revised figures for bituminous coal and lignite consumed by public utility power plants in power generation, including a small quantity of coke.

M 115, coal consumed by Class I railroads. Data for 1917–1932, from the Interstate Commerce Commission, exclude consumption in shops, roundhouses, and stations, as well as all consumption by Class II and Class III railroads. (The comparable Interstate Commerce Commission figure for 1933 was 66,198,000 short tons.) For 1933–1960, figures are from the Association of American Railroads and represent consumption of bituminous coal and lignite by Class I railroads for all uses, including locomotive, powerhouse, shop, and station fuel.

M 116, coal consumed in coke plants. Separate series on coal consumption in beehive and byproduct ovens are also available in the sources for series M 113–121.

M 117–120, coal consumed in all other uses. For 1917–1932, figures are combined for bituminous coal consumed by cement mills, steel and rolling mills, other industrial, and retail dealer deliveries. The combined series was titled "all other uses" and was derived by subtracting the known consumption items from estimated total consumption (see text for series M 113).

M 119, coal consumed by other manufacturing and mining industries. For 1933–1970, figures are estimates based upon reports collected from a selected list of representative manufacturing plants.

M 120, coal consumption, retail deliveries to other consumers. For 1933–1970, figures are estimates based upon reports collected from a selected list of representative retailers. The figures include some coal shipped by truck from mine to final destination.

M 121, coal consumed in bunker foreign and lake vessels. This is a Bureau of the Census series and represents bunker coal loaded on vessels engaged in foreign trade. Such coal is not included in the export statistics and, therefore, is included under domestic consumption by use. Beginning 1933, lake vessels have been included.

M 122. **Coke** production, 1880–1970.

Source: See general note for series M 13–306.

Figures are collected through voluntary reports by coke-plant operators within conterminous United States. Coverage is limited to products made in high-temperature slot-type and beehive ovens. Coke made by other processes—in coal-gas retorts, by low temperature carbonization of coal, and carbonization of the residue from the refining of crude tar and petroleum—is excluded. In recent years, reports have been received from every oven-coke plant in operation and from most of the beehive plants that were in operation. Production has been estimated for the nonreporting plants (all small) and, therefore, coverage is presumed to be complete.

M 123–137. General note.

Coverage of anthracite statistics by the Bureau of Mines is limited to Pennsylvania, and includes the coal from Sullivan County, Pa., which is classified as semianthracite. Information is obtained through a mail canvass of all known anthracite operators. Producers report directly about 99 percent of total production; the remaining one percent is estimated.

The presence of anthracite near the surface of the earth resulted in the development of "bootlegging"—mining without the consent of the owner of the mineral rights. This practice grew rapidly during the depression of the 1930's and, although some information on "bootleg" operations was available during the 1940's, such production is not included in Bureau of Mines figures shown here. For 1941–1950, Bureau of Mines production data include only that part of "bootleg" production purchased by authorized operators and prepared at their breakers. For 1951–1970, however, output of these independent operators (no longer called "bootleggers" since they are now operating under legal agreements with the land owners) has been included. For 1951, output of this type was estimated at 1.5 million short tons. Estimates of "bootleg" production for earlier years may be found in the *Minerals Yearbook*.

Employment statistics for Pennsylvania anthracite have been similarly affected by this change in coverage (see *Minerals Yearbook, 2952,* for a more complete discussion). As a result of this change in coverage, production and employment figures since 1951 are not strictly comparable with similar data for earlier years.

M 123–125. Pennsylvania anthracite production, 1808–1970.

Source: 1808–1885, H. N. Eavenson, *The First Century and a Quarter of the American Coal Industry,* Pittsburgh, 1942, pp. 426–434; 1886–1970, see general note for series M 13–306.

Total production of Pennsylvania anthracite consists of production from underground mines, strip pits, culm banks, and dredging. Since figures for the latter two methods are not separately presented here, the figures for underground and strip do not add to total production. Also, see the general note for series M 123–137 for discussion of "bootleg" production and its effects on total production. Some anthracite production occurred in 1800–1807, but it amounted to less then 500 tons annually.

M 126. Pennsylvania anthracite, average value, f.o.b. mine, 1880–1970.

Source: See general note for series M 13–306.

Average value per short ton, f.o.b. mine, includes a reported value for coal not sold but used by the producer.

M 127–128. Pennsylvania anthracite, foreign trade, 1867–1970.

Source: See general note for series M 13–306.

Beginning September 1963, anthracite import data are not available because of changes in commodity classifications.

For 1867–1885, figures are for fiscal years ending June 30; 1886–1970, they are on a calendar-year basis. To obtain a comparable series throughout, data for 1867–1889 were converted from long to short tons.

M 129. Pennsylvania anthracite, net change in producers' stocks, 1913–1961.

Source: See general note for series M 13–306.

Figures represent net change in producers' stocks as of December 31, except for 1913–1918 when changes are as of March 31. Information on producers' stocks has existed in different forms since 1913. In recent years, information has been supplied by the Anthracite Institute and the Anthracite Committee. Data for 1931–1935 are from unpublished data of the Anthracite Institute and represent prepared coal on the ground at the breakers. Data for 1913–1930 are from the Cost Reports of the Federal Trade Commission (*Coal* No. **2,** p. 27) and *Hearings* before the Freylinghuysen Coal Committee, S. Res. 126, 66th Congress, 1st Session (part **1,** p. 308).

M 130–134. Pennsylvania anthracite, employment, **1870–1970.**

Source: 1870–1889, U. S. Bureau of Mines, *Coal Mine Fatalities in the United States, 1870–1914,* Bulletin **115, 1916,** p. **290; 1890–1970,** *Mineral Resources of the United States* and *Minerals Yearbook,* annual volumes.

Figures are active-period averages, excluding periods when the mine is not in operation. Figures for **1951–1970** are not strictly comparable with earlier years because of inclusion, since **1951,** of employees of independent operators (formerly known as "bootleggers"). See general note for series M 123–137.

Data for selected years since **1943** for the average number of hours worked per day are also presented in the *Minerals Yearbook,* chapters on Employment and Injuries; data for nominal hours of work in earlier years appear in Barger and Schurr, cited in text for series M **13–37.**

M 135. Pennsylvania anthracite, number **of** man-days idle because of strikes, **1900–1970.**

Source: See source for series M **112.**

M 136. Pennsylvania anthracite, quantity cut **by** machines underground, **1911–1970.**

Source: See general note for series M 13–306.

M 137. Pennsylvania anthracite, quantity loaded by machines underground, **1927–1970.**

Source: See general note for series M 13–306.

Figures for **1927–1928** were reported by the Pennsylvania Department of Mines. Figures were first collected by the Bureau of Mines in **1929.**

M 138–141. Crude petroleum production, average value **at** well, and foreign trade, **1859–1970.**

Source: See general note for series M **13–306.**

M 138, production. In recent years coverage has been virtually complete as indicated in *Minerals Yearbook,* 1953, vol. II, which states that "complete coverage of production . . . was obtained by voluntary reports from the industry, supplemented by minor estimates" (p. **358).**

M 139, average value at well. "Annual canvasses provided supplemental information on the value of crude petroleum at the well" *(Minerals Yearbook, 1953,* vol. II, p. **358).**

M 140, imports. Beginning **1934,** the data have been obtained by the Bureau of Mines from the petroleum refining companies. For recent years, imports include shipments to the States from Puerto Rico and other areas administered by the United States, which were excluded prior to **1920.** This series has been shown only since **1913** because crude and topped oil have been shown separately only since July **1912** *(Mineral Resources, 192.2,* vol. II, p. **390).**

M 141, exports. Data for **1893–1896** represent fiscal years ending June **30;** all other years presumably are calendar years. For **1916** and earlier years, the figures include all crude mineral oils. For **1928** and earlier years, reexports of foreign crude petroleum are included; prior to **1919** such reexports were negligible. For recent years, exports include shipments from the States to Puerto Rico and other areas administered by the United States. Prior to **1920,** the figures exclude such shipments; therefore, data prior to **1920** are not strictly comparable with those for later years. (For comparison, the **1920** export figure excluding territorial shipments is **8,757.)**

M 142. Crude petroleum, estimated proved reserves, **1899–1970.**

Source: American Petroleum Institute, 1899–1948, *Petroleum Facts and Figures, 1950,* New York, **1950,** p. **182; 1949–1955,** same publication, **1956** issue, p. **164; 1956–1970,** U.S. Bureau of Mines, *Minerals Yearbook,* annual volumes.

The *Minerals Yearbook,* 1956, vol. II (pp. **330–331)** states that estimated proved reserves "include only oil recoverable under existing economic and operating conditions.. . . Includes crude oil that may be extracted by present methods from fields completely developed or explored enough to permit reasonably accurate calculations. The change in reserves during any year represents total new discoveries, extensions, and revisions, minus production."

For **1899–1934,** figures are estimates of the American Petroleum Institute and are not based on geological surveys. The figure for **1899** is designated in the source as representing the entire period **1859–1899.** Except for **1936,** figures for **1935–1970** are estimates of the Committee on Petroleum Reserves of the American Petroleum Institute. The estimate for **1936** has been taken by the American Petroleum Institute from *The Lamp* (Standard Oil Company of New Jersey). For **1946–1970,** figures are for crude oil only. Previously, estimates included some condensate. (The **1945** figure on the new basis is **19,941,846** thousand barrels.)

M 143–146. Natural gas liquids, production and value, **1911–1970.**

Source: U.S. Bureau of Mines, series **M 143** and **M 145,** *Minerals Yearbook,* annual volumes, except M **145** for **1943,** *Monthly Petroleum Statement No. 402;* series **M 144** and **M 146,** unpublished data.

Statistics on the production of natural-gas liquids are collected on monthly questionnaires from natural-gas processing plants, supplemented by data from State agencies on liquids recovered at pipeline compressor stations and at gas-dehydration plants. Plant condensate delivered to a plant and fractionated into finished products was reported as output of finished products.

Natural gasoline and cycle products include all natural-gas liquids except liquefied petroleum gases and ethane. Therefore, they include such products as natural gasoline, natural gasoline mixtures, finished gasoline, naphtha, plant condensate, kerosene, and distillate fuel produced from natural gas. Beginning **1954,** isopentane previously included in liquefied petroleum gases, is also included.

M 147–161. General note.

Data on natural-gas consumption and value are collected by annual surveys of oil and gas producers, natural gas processing plants, gas pipeline companies and gas utility companies with separate reports obtained for each State in which they operate. Data for production are obtained from the State agencies.

Volumes are reported at the pressure base selected by the reporting company; however, prior to **1961,** if the reported pressure base deviated more than **5** percent from **14.65** pounds per square inch absolute (psia) at 60°F, it was corrected to this base. Beginning **1961,** gas volumes have been reported or converted to a pressure base of **14.73** psia at 60°F.

M 147. Natural gas, marketed production, **1900–1970.**

Source: U.S. Bureau of Mines, *Minerals Yearbook,* annual volumes.

Figures comprise gas sold or consumed by producers, including losses in transmission, amounts added to storage, and increases in gas in pipelines. They are equal to gross production minus repressuring, vented, and wasted. Figures for gross withdrawals may be obtained by summation of series M **147** (marketed production), series M **149** (vented and wasted), and series M **150** (repressuring).

Figures for **1900–1919** are not strictly comparable with those for later years. Apparently, for the earlier period, neither net storage change nor transmission loss was included.

M 148. Natural gas, average value at well, **1922–1970.**

Source: U.S. Bureau of Mines, **1922–1935** and **1951–1970,** *Mineral Resources of the United States* and *Minerals Yearbook,* annual volumes; **1936–1950,** *Information Circular 7644,* **p. 3.**

In **1970,** the average value at the well was **17.1** cents per thousand cubic feet as compared with **4.5** cents in **1940,** when the residential use of natural gas was only slightly greater than the gas used to manufacture carbon black.

M 149–150. Natural gas, vented and wasted, and used for repressuring, **1920–1970.**

Source: See source for series M 148.

Figures for vented and wasted gas are partly estimated. The data are compiled from information submitted by respondents, supplemented by estimates based on information from State agencies.

M 151. Natural gas, estimated proved reserves, **1925–1970.**

Source: American Gas Association, 1925–1944, *Historical Statistics of the Gas Industry*, New York, 1956, pp. 20–21; 1945–1970, *Reserves of Crude Oil, Natural Gas Liquids and Natural Gas in the United States and Canada and United States Productive Capacity as of December 31, 1970*, vol. 25, May 1971, published jointly by American Gas Association, American Petroleum Institute, and Canadian Petroleum Association. (Copyright.)

The definition of proved reserves is analogous to that for crude oil (see text for series M 142). For 1925–1944, the source cites Lyon F. Terry, "Our Natural Gas Reserves," *Proceedings*, Natural Gas Department of the American Gas Association, 1944, p. 133; and Exhibit No. 446, Federal Power Commission Docket G-580, 1946 (witness E. De Golyer). For 1945–1970, figures are estimates by the Committee on Natural Gas Reserves of the American Gas Association.

M 152–161. Natural gas, consumption, **1906–1970.**

Source: See source for series M 148.

Total consumption figures can be computed by summing the figures for these component series. For 1920–1970, such totals would differ from series M 147 (marketed production) by extraction loss (in producing natural-gas liquids), net change in storage, transmission loss, and net imports or exports. Before 1920, the definition of consumption as compared to production is unclear. Such totals would also differ from series M 88, natural gas, dry (expressed in terms of B.t.u.'s), which includes transmission loss.

For 1906–1935, the residential figures (series M 153) appear in the source under "domestic consumption." The figures for "other industrial'' consumption (series M 161) were obtained for certain of the early years by adding component data shown in the basic source. The figures include consumption in petroleum refineries, natural-gas pipelines, electric utilities, and other industrial plants. For 1906–1929, data for public utilities consumption came from the Geological Survey, while other components were partly estimated.

M 162–177. Input and output of petroleum products at refineries, **1916–1970.**

Source: U.S. Bureau of Mines, 1916–1930, *Petroleum Refinery Statistics, 1930*, Bulletin 367, p. 15; 1931–1970, *Minerals Yearbook*, annual volumes.

Series M 162 is the sum of petroleum refinery inputs, and excludes unfinished oils rerun (net). Series 166 is the sum of all finished refinery products; unfinished products are excluded except that M 167 includes unfinished gasoline beginning with 1952. For 1916–1922, this sum was not computed because of incomplete data.

For 1952–1970, jet fuel components are excluded from series M 167–169 and jet fuel included in series M 177, except as noted.

The conversion factors used by the Bureau of Mines for series M 171–175 were: Wax, 280 pounds = 1 barrel; coke, 1 short ton = 5 barrels; asphalt, 1 short ton = 5.5 barrels; and still gas, 3,600 cubic feet = 1 barrel.

M 178–187. Petroleum products, imports and exports, **1920–1970.**

Source: U.S. Bureau of Mines, 1920–1937, *Monthly Petroleum Statement No. 402;* 1938–1970, *Minerals Yearbook*, annual volumes.

Imports include shipments to the States from Puerto Rico and outlying areas of the United States; exports include shipments from the States to these areas.

Total imports (series M 178) also include motor fuel, kerosene, lubricants, wax, asphalt, and other miscellaneous petroleum products not shown separately here. Total exports (series M 181) also include petroleum coke, petroleum asphalt, and other miscellaneous products not shown separately here. For 1923–1937, natural gasoline exports are excluded; for other years, they are included in gasoline (series M 182).

M 188–204. Nonmetals, **1818–1970.**

Source: See general note for series M 13–306.

Of the large number of nonmetals, excluding fuels, only the more important ones and those for which more adequate data exist have been included here. Although raw clays are among the more important nonmetals, the statistical series available are so inadequate as to result in their exclusion. For many commodities, adequate production or shipments series exist and have been shown, but satisfactory long-run average value or price series may not exist. Import and export series have been shown only where they are of considerable importance to the industry.

M 188, cement shipments. For 1818–1911, represents production; for 1912–1970, represents shipments of hydraulic cement. Coverage includes natural cement since 1818, portland cement beginning 1870, slag cement (formerly referred to as puzzolan cement) beginning 1896, and hydraulic lime cement beginning 1934. It also includes prepared masonry cement made at natural- and slag-cement plants and, beginning 1955, prepared masonry cement made at portland-cement plants. Portland cement shipments represented about 99 percent of the totals in series M 188 for 1954, but between 94 and 95 percent for 1955.

For 1818–1890, figures are estimated; for 1891–1970, they are based on practically complete returns from all producers. For 1921–1970, the figures have been reported in barrels of uniform weight of 376 pounds. However, prior to 1921, the reports were not always uniform (see *Mineral Resources of the United States, 1916*, vol. II, pp. 342–343).

Figures include Hawaiian production beginning 1960 and Puerto Rican production beginning 1939.

M 189, average value of portland cement, Represents average value per 376-pound barrel of shipments from mills; value is that received f.o.b. mills, excluding cost of containers. Figures include Hawaii beginning 1960 and Puerto Rico beginning 1939. Prior to 1926, figures were identified as "average factory value per barrel in bulk."

M 190, crude gypsum mined. Represents crude gypsum mined and ready for calcining or for uncalcined use; excludes byproduct gypsum. Except for the first few years, coverage is believed to be complete.

M 191, lime sold by producers. Includes quicklime, hydrated lime, and dead-burned dolomite. For some years prior to 1921, the figures include lime produced and used by soda ash manufacturers; since 1953, they include lime used by all producers. For 1921–1952, only small quantities of "captive" tonnage were included but, beginning 1953, coverage is assumed to be complete. (Data for 1889–1903 are not available, and the figures for 1880–1888 are considered much too high; see text for series M 24.)

M 192, lime, average value per short ton. Represents the selling value f.o.b. plant, excluding cost of containers. Values for 1882–1888 were converted from average value per barrel at the kiln to an average value per short ton. The conversion factor used was 200 pounds = 1 barrel (*Mineral Resources of the United States, 1904*, p. 840). See also text for series M 24 and M 191.

M 193, sand and gravel sold or used. For 1902, coverage was only partial; for 1904, most sand producers were included; since 1905, both sand and gravel are included. Data include commercial and government-and-contractor operations. For 1954–1970, ground sand (721 thousand short tons in 1954) is included. See also Bureau of Mines, *Development of the Sand and Gravel Industry*, Information Circular No. 7203, 1942.

M 194, stone sold or used by producers. Includes both dimension and crushed or broken stone but, for 1916–1953, excludes stone used for abrasives, lime, and cement. For 1954–1970, includes stone used for abrasives and in making cement and lime, and shell for various uses (95 million tons in 1954). Coverage includes granite, basalt, marble, limestone, sandstone, and other stone such as mica, schist, conglomerate, argillite, and various light-colored rocks.

M 195, sulfur production from Frasch mines. Although, for most years, the major portion of sulfur production has been from Frasch process mines, these figures do not represent total sulfur output. At present, quantities of sulfur are recovered as elemental sulfur from coal and natural and refinery gases, in pyrites (see series M 198), and as byproduct sulfuric acid and other forms. In 1970 (in terms of thousands of long tons of sulfur content) Frasch production totaled 7,082; recovered elemental, 1,449; byproduct sulfuric acid, 535; and other forms, 483.

M 196–197, sulfur, crude imports and exports. Imports represent imports of crude sulfur and sulfur ore. For 1867–1883, pyrites imports are presumably included.

Although no imports of sulfur ore were reported for most of the 1940's, processors stated that during 1941–1945 at least 2,000 tons of sulfur ore were imported from Mexico. Figures for 1867–1887 are on a fiscal-year basis ending June 30; for 1888–1970, on a calendar-year basis.

Exports of crude sulfur have been separately classified since 1905. The first shipment occurred in 1904 when 3,000 tons were shipped from Louisiana to France *(Mineral Resources of the United States, 1904,* p. 1079).

M 198, pyrites production. Figures for 1922–1927 have been corrected for flotation concentrates *(Mineral Resources of the United States, 1931,* p. 145).

M 199, pyrites imports. Prior to 1884, pyrites imports were classed with sulfur ore; for 1888–1890, they were included under imports of iron ores. For early years, the restriction of not more than 3.5 percent copper content was placed on the import classification. For recent years, figures are for pyrites containing over 25 percent sulfur.

M 200, salt sold or used by producers. Coverage includes evaporated salt, rock salt, and the salt content of brine production.

M 201, potash sold by producers. Expressed in terms of K_2O equivalent, which is the standard basis for comparison of different salts of widely varying composition.

M 202, potash imports. Represents crude and refined potash materials, expressed in terms of approximate K_2O equivalent. For 1905–1912, they are based on information in a fertilizer industry report by the Federal Trade Commission; thereafter, on tabulations by the Department of Commerce (see *Mineral Resources of the United States, 1917,* vol. II, p. 401).

M 204, phosphate rock exports. Figures for 1940–1953 are also published in Bureau of Mines, *Mineral Facts and Problems,* Bulletin No. 556, p. 689. Generally, figures include high grade hard rock, land pebble, and other (colloidal matrix, soft phosphate rock, and Tennessee, Idaho, and Montana rock). Sintered matrix is included only for selected years. For 1942–1946, Florida soft rock, colloidal, and sintered matrix are excluded.

M 205–207. Iron ore, usable, production and shipments, 1860–1970.

Source: 1860–1898 and 1907–1970, U.S. Bureau of Mines, *Mineral Resources of the United States* and *Minerals Yearbook,* annual volumes; 1899–1906, see source for series M 72–75, p. 278.

The Bureau of Mines publishes several iron ore production series. Crude iron ore production as shown in series M 212–213 for 1942–1970 represents the mine product before treatment for removal of waste constituents. Figures for usable iron ore production shown here represent such output after treatment.

Ore varieties included are hematite, limonite, and magnetite. For 1942–1957, figures include byproduct material from pyrites; beginning 1958, shipments exclude byproduct ore. For 1907–1970, coverage is restricted to ore containing less than 5 percent manganese. Prior to 1907, Bureau of Mines data include ores with a higher manganese content. However, the Barger-Schurr series presented here for 1899–1906 assures comparability back to 1899. For 1860–1898, figures very probably include ores with a higher manganese content.

Data for 1882–1888 are estimated; for 1885–1888, they represent consumption of domestic ores. Corresponding consumption estimates (in thousands of long tons) for 1882–1884 are: 1882, 8,700; 1883, 8,800; and 1884, 7,718. Figures for 1875 and 1881 were estimated by I. I. Bell, *Principles of the Manufacture of Iron and Steel,* 1884, p. 451; those for 1860, 1870, and 1880 are from decennial census reports.

M 208. Iron ore, average value of shipments, 1892–1970.

Source: See general note for series M 13–306 and M 206.

Figures represent average value of shipments, f.o.b. mine.

M 209. Iron ore, price, Mesabi, non-Bessemer, 1894–1970.

Source: American Metal Market, *Metal Statistics,* New York, 1919, 1957, and 1970 editions. Reprinted with permission of American Metal Market, Fairchild Publications, Inc., N.Y., N.Y., copyright.

Prices are those at Lake Erie docks.

M 210–211. Iron ore, foreign trade, 1872–1970.

Source: See general note for series M 13–306.

For some years during the 1940's, some pyrites cinder was included in imports. For 1872–1878, figures are for fiscal years ending June 30; thereafter, for calendar years.

M 212–213. Iron ore production, by mining method, underground and open pit, 1909–1970.

Source: 1909–1929, N. Yaworski, O. E. Kiessling, C. H. Baxter, L. Eaton, and E. W. Davis, *Technology, Employment, and Output Per Man in Iron Mining,* WPA-NRP Report E-13, Philadelphia, June 1940; 1930–1970, see general note for series M 13–306.

For 1909–1941, the data are in terms of usable iron ore; beginning 1942, they represent production of crude iron ore before treatment for removal of waste constituents.

For 1909–1940, some underground production may be included in the open pit figures. For a few other years, the statistical allocation of production by method accounted for somewhat less than the total production.

M 214–216. Iron ore employment, 1880–1970.

Source: 1880–1922, see source for series M 212–213 for 1909–1929, pp. 206 and 215; 1923–1970, see general note for series M 13–306.

Figures are active period averages, excluding periods when the mines were not in operation. Slight variations occur in coverage in some years.

M 217. Pig iron shipments, 1810–1970.

Source: See general note for series M 13–306.

For 1810–1909, figures represent production; for 1910–1970, shipments. *Mineral Resources of the United States, 1910,* vol. I, p. 98, states: "The statistics for 1854 and all succeeding years (through 1909) were collected by the American Iron and Steel Association; those for 1810, 1840, and 1850 are census figures; those for the other years are largely estimates by early statisticians." Figures exclude blast furnace output of ferroalloys. Published data have been converted to long tons for comparability with related series.

M 218. Pig iron, average price, 1799–1970.

Source: American Metal Market, *Metal Statistics,* New York, 1910, 1919, 1930, 1940, 1957, and 1971 editions. Reprinted with permission of American Metal Market, Fairchild Publications, Inc., N.Y., N.Y., copyright.

Several pig iron price series have been spliced together for presentation. For 1799–1843, the series shown is titled "charcoal pig iron;" for 1844–1907, "No. 1 Foundry, Philadelphia." For 1908–1970, quotations of "basic f.o.b. Valley furnaces" are shown. Price data are available for No. 1 Foundry, Philadelphia, to 1970, but it was considered preferable to show the price of "basic" pig iron, f.o.b. Valley, for recent years (available only since 1908) because of its predominant importance today, and to splice this series with other price data for earlier years. The series spliced together exhibit similar price movements for years in which overlap occurs. For 1799–1843, the series for "charcoal" pig iron is noted in the source as representing best pig iron for 1799–1827, average of grades for 1828–1833, gray iron for 1834–1840, and No. 1 Foundry for 1841–1843. For 1844–1907, the series titled No. 1 Foundry, Philadelphia, is noted as referring to several different grades during the period; for 1844–1895, the series refers to No. 1 anthracite Foundry iron.

M 219–220. Pig iron, imports and exports, **1922–1970.**

Source: See general note for series M 13–306.

Prior to 1922, pig iron imports and exports were not shown separately from ferroalloys.

M 221–234. Ferroalloying metals, **1868–1970.**

Source: See general note for series M 13–306.

M 221, manganese ore, domestic output (gross weight). For 1880–1909, figures represent production; for 1910–1970, mine shipments. Coverage includes metallurgical, battery, and miscellaneous ores. For 1880–1914, figures include only ore containing 40 percent or more manganese; for 1915–1970, 35 percent or more. (See Barger and Schurr, cited for series M 72–75.)

M 222, manganese ore imports (gross weight). For recent years, figures are restricted to ores containing at least 35 percent manganese; for earlier periods, the manganese content is not specified.

For 1868–1888, figures represent only Canadian shipments to this country; figures for total imports are not available. For 1868–1872, figures are for fiscal years ending June 30. (Imports during fiscal 1873 were 939 short tons.)

M 223, chromite, domestic output (gross weight). These figures represent shipments. Data for 1880–1889 are noted as estimates; those for 1890–1910 are described as having an industry coverage of 95 percent. For later years coverage is virtually complete. Prior to 1880, cumulative output (all from Pennsylvania and Maryland) amounted to 224,000 short tons. Domestic mine production of chromite ceased in 1961 when the Federal government's last Defense Production Act contract was concluded.

M 224, chromite imports (gross weight).

M 225, tungsten concentrates, domestic output (tungsten content). For 1900–1909, data are called "production." *Mineral Resources of the United States, 1910,* vol. I, p. 740, states that "The production of tungsten ores in this country from year to year can be fairly compared. . . only since and beginning with 1906, as before that date no effort had been made to reduce the ores to a common basis of concentration." Figures for 1900–1909 were converted from tungsten concentrates to tungsten content on the basis that one short ton of 60 percent WO_3 contained 951.72 pounds of tungsten. For 1910–1970, figures represent shipments.

M 226, tungsten concentrates imports. For 1912–1922, figures are in terms of gross weight; for 1923–1970, tungsten content.

M 227, molybdenum ores and concentrates, domestic output (molybdenum content). Figures shown are for shipments and are believed to represent complete coverage of the industry.

M 228, molybdenum ores and concentrates exports (molybdenum content). Figures include roasted concentrates. Export figures are not separately available prior to 1940, except for 1939 gross weight (see *Foreign Commerce and Navigation,* 1939, p. 520, and *Minerals Yearbook, 1940, Review* of 1939, p. 621). However, exports were of substantial importance.

M 229, vanadium ores and concentrates, domestic output (vanadium content). Data shown are for shipments. Production occurred prior to 1911, but data for the period are not available. Data for 1927–1931 are not available because publication would disclose individual returns; data for 1934–1935 represent the vanadium content of carnotite ores only (Bureau of Mines was not at liberty to publish other data). Mine shipments of ores and concentrates for 1940–1970 were measured by receipts at mills and Government purchasing depots.

M 230, vanadium ores and concentrates imports. For 1918–1933, figures are in terms of gross weight; for 1934–1970, vanadium content. (In 1934, the vanadium content equaled 207 short tons compared to the gross weight of 1,754 short tons.) The figure for 1918 represents July through December only; imports of vanadium were not separately recorded prior to 1918.

M 231–234, nickel (content). The United States has been largely dependent on imports of ore, metal, and matte plus domestic secondary recovery from scrap for its supply of nickel. Some small quantities are also recovered as byproduct production of copper refining and other metal refineries (in 1970, 2,670 short tons).

M 231, nickel primary production (nickel content). Production from domestic ore has been of minor importance. However, because of a single mine in Riddle, Oregon, production has increased substantially — from 3,356 tons in 1955 to 13,124 tons in 1968. Production since that time has been relatively stable.

M 232, nickel secondary production (nickel content). For 1916–1918, coverage is incomplete, since the production of one large firm is only partly covered.

M 233, nickel imports (nickel content). Most nickel imports come from Canada. In 1970, 104 thousand out of 117 thousand short tons of metal (gross weight) were directly from Canada. Figures were compiled by the Bureau of Mines (or the Geological Survey) from records of the Bureau of the Census except that, for 1950–1956, they include refinery residues, data on which are reported to the Bureau of Mines by importers.

M 234, nickel, price, electrolytic (cents per pound). For 1913–1927, the source states that prices were computed from data from one large nickel company by dividing the gross amount received by the total quantity sold. For 1913–1924, prices are for March 31; for 1925–1927, December 31. (The March 31, 1925, quotation was 28.83 cents per pound.) For 1928–1941, quotations are for 2-ton minimum lots in New York City. (The New York quotation for 1942 is 35 cents per pound compared to 31.5 cents in Canada.) For 1942–1970, figures represent price quotations to United States buyers by the International Nickel Co., Inc., for electrolytic nickel in carlots f.o.b. Port Colburne, Canada. Quotations include duty paid in the United States, as follows: 2½ cents per pound, 1942–1947; 1¼ cents to September 1965; no duty to October 1967; 1¼ cents to January 1968; and no duty thereafter.

M 235–240. Copper production, **imports, and** exports, **1845–1970.**

Source: See general note for series M 13–306.

Figures are shown for different stages of the production process. Mine output is represented by the recoverable copper content of domestic ores mined. The total domestic output of primary metal from domestic and foreign ores (i.e., excluding secondary recovery from scrap) is represented by primary refinery output. The difference between primary refinery output and the recoverable copper content of mine output in any year is accounted for to some extent by time lags and changes in stocks in the different production stages; but mainly, the difference measures the amount of new copper produced in the United States from foreign ores, concentrates, and other unrefined materials.

In addition to copper from primary sources, domestic supply includes copper recovered from scrap (called secondary production) either as unalloyed copper or in alloys and compounds. Two series are shown for secondary output: Total secondary production and

recovery from old scrap only. The figures on old scrap measure what the junk pile contributes to metal supply each year, while the difference between old scrap and total secondary production is new scrap—a body of material which, in effect, is continuously being recycled in the production and fabrication of copper metal and does not constitute a true addition to supply at any time.

Primary and secondary output together measure the supply of metal in the United States produced by domestic refiners from foreign and domestic ores and scrap. To measure the supply of refined metal available for consumption in the United States it is necessary also to account for foreign trade; hence, import and export series for the refined metals are shown.

M 235, copper production, mine (recoverable content). For 1845–1905, figures represent smelter production of copper from domestic ores; for 1906–1970, they refer to the estimated recoverable copper content of domestically mined ores. The statistical differences between the two series are slight. They principally reflect time lags and changes in stocks in the two stages of production. (The comparable smelter figure for 1906 equals 458,903 short tons.)

M 236, copper production, primary refined from domestic and foreign ores. Figures represent total primary refinery production from both domestic and foreign ores.

M 237, copper, total secondary production. Figures represent secondary production from both new and old scrap.

M 239, copper refined imports. Figures represent imports of refined copper only. Imports of copper ore, concentrates, and various unrefined copper metallic materials have historically been of much greater significance than imports of copper refined in ingots, plates, or bars. An approximation of unrefined imports can be obtained by subtracting recoverable content of mine output (series M 235) from primary refinery output (series M 236). For 1916–1933, the sources used here do not always specify a precise definition of imports; for 1934–1970, figures are for "general imports."

M 241. Copper price, New York, electrolytic, **f.o.b.** refinery, **1850–1970.**

Source: 1850–1859, U.S. Bureau of Mines, *Mineral Resources of the United States, 1929,* vol. I, p. A 123; 1860–1955 and 1969–1970, American Metal Market, *Metal Statistics,* 1919, 1957, and 1971 editions, reprinted with permission of American Metal Market, Fairchild Publications, Inc., N.Y., N.Y., copyright; 1956–1968, U.S. Bureau of Mines, *Minerals Yearbook,* annual volumes.

For 1850–1859, figures are for an unspecified grade of copper. The source cites *Weed's Copper Handbook,* vol. XI, as the basis for these data. For 1860–1899, figures refer to the New York price of Lake copper. In 1900, this price was 16.70 cents as compared with the electrolytic quotation of 16.54 cents. For 1900–1967, data are the average New York prices for electrolytic copper, f.o.b. refinery. For 1968–1970, the price is for electrolytic copper, delivered.

M **242–247.** Lead production, imports, and exports, **1801–1970.**

Source: See general note for series M 13–306, except for series M 243, 1801–1927, which is from U.S. Bureau of Mines, *Economic Paper No.* **5,** L. A. Smith, "Summarized Data of Lead Production," 1929, pp. 12–14.

The text for series M 235–240, which discusses the interrelationships among the copper production and foreign trade series, is also generally applicable to lead.

M 242–243, lead production. Series M 242 represents the estimated recoverable lead content of domestic mine output; series M 243 represents the total primary refinery output from both domestic and foreign ores and base bullion. The two series differ by the amounts of ore and unrefined lead which are imported into this country for domestic refining (covered in series M 243) and by the amounts of lead ore and concentrates consumed outside the refineries for such products as antimonial lead and lead pigments and salts (covered in series M 242). Other smaller differences between the two series reflect time lags and differences in stock changes at the two stages of production.

Series M 243 includes lead refined domestically from foreign ore for 1886–1970and lead refined from foreign base bullion for 1891–1970.

M 244, lead, total secondary production. Figures represent secondary production from both new and old scrap. They include lead recovered as refined metal and in antimonial lead and other alloys.

M 246, lead imports. Although the figures purport to refer to refined lead in pigs and bars, the specific items included change frequently over the long period, and can be identified only by referring to the basic sources. For example, for 1867–1934, imports of old lead are also covered. Figures for many recent years include lead received by the Government and held in stockpile.

For 1867–1886, data are for fiscal years ending June **30.**

M 247, lead exports. Figures represent exports of refined lead in pigs and bars. For 1914 and 1915, exports of lead refined domestically from foreign ores are not included. During this period, all such exports were recorded in the statistics of exports as ore and concentrates, i.e., the form in which they were imported, and not as refined metal. Hence, the figures represent only exports of refined metal from domestic ore.

Although the figures purport to refer to refined lead in pigs and bars, the specific items included change frequently over the long period, and can be identified only by referring to the basic sources. For example, for 1920–1936, exports of old or scrap lead are also included. For 1851–1868, data are for fiscal years ending June 30.

M 248. Lead, price of pig lead at New York, **1812–1970.**

Source: 1812–1883, W. R. Ingalls, *Lead and Zinc in the United States,* Hill Publishing Co., New York, 1908, p. 203; 1884–1970, American Metal Market, *Metal Statistics,* 1971, New York, 1971, p. 195, reprinted with permission of American Metal Market, Fairchild Publications, Inc., N.Y., N.Y., copyright.

Price quotations are generally available both in St. Louis and in New York. New York prices are shown because of proximity to the larger market.

M 249–254. Zinc production, imports, and exports, **1858–1970.**

Source: See general note for series M 13–306, except for series M 250, 1858–1881, which is from U.S. Bureau of Mines, *Economic Paper No.* **2,** E. W. Pehrson, "Summarized Data of Zinc Production," 1929, p. 19.

The text for series M 235–240, which discusses the interrelationships among the copper production and foreign trade series, is also generally applicable to zinc.

M 249–250, zinc production, mine (recoverable content) and primary smelter slab zinc. Series M 249 represents the estimated recoverable zinc content of domestic mine output; series M 250, the total primary smelter output (including electrolytic plants) from both domestic and foreign ores and base bullion. The two series differ by the amounts of ore and unsmelted zinc imported into this country for domestic smelting (covered in series M 250), and by consumption of zinc ore and concentrates outside the smelter directly in the production of zinc dust and zinc pigments and salts (covered in series M 249). Other smaller differences between the two series reflect time lags and differences in stock changes at the two stages of production.

For 1858–1903, smelter output (series M 250) is from domestic ores only. For 1904–1905, an unknown quantity of smelter output from foreign ore is included. For 1906–1970, output from both domestic and foreign ores is included.

M 251, zinc, total secondary production. Includes secondary production from both new and old scrap.

M 253, zinc imports. Figures are for zinc blocks, pigs, and slabs. For 1867–1885, figures are for fiscal years ending June 30.

M 254, zinc exports. Figures represent exports of zinc in blocks, pigs, and slabs. The specific items included, however, changed fre-

quently over the long period and can be identified only by referring to the basic sources.

For 1864–1885, figures are for fiscal years ending June 30.

M 255. Zinc, price of slab zinc at New York, **1853–1970.**

Source: 1853 and 1864, U.S. Bureau of Mines, *Mineral Resources of the United States,* 1929, vol. I, p. A 123; 1875–1879, W. R. Ingalls, *Lead and Zinc in the United States,* Hill Publishing Co., New York, 1908, p. 342; 1880–1970, American Metal Market, *Metal Statistics,* 2971, New York, 1971, pp. 331–333, reprinted with permission of American Metal Market, Fairchild Publications, Inc., N.Y., N.Y., copyright.

Quotations for slab zinc are available both at St. Louis and in New York. New York prices are shown because of proximity to the larger market.

M 256–267. Bauxite, aluminum, magnesium, and uranium, **1886–1970.**

Source: See general note for series M 13–306, except for series M 262, 1895–1955, which is from American Bureau of Metal Statistics, *Yearbook, 1938,* and *Yearbook,* 1956, New York, 1934 and 1957, respectively (copyright).

M 256, bauxite domestic output. Figures represent production for 1919–1928 and 1940–1970, production or shipments for 1929–1934 (the terms are used interchangeably during this period), and shipments for all other years. For 1889–1934, the figures refer to bauxite "as shipped;" for 1935–1970, they are in terms of "dried bauxite equivalent." Because of the widely differing moisture content of the different forms (crude, dried, and calcined), dried bauxite equivalent yields a more comparable measure of the quantity of bauxite produced or shipped.

Figures for 1889–1918 are from the 1918 volume of *Mineral Resources of the United States,* vol. I, p. 516. The source states (p. **514)** that the figures "are believed to represent more accurately (than other available figures) the condition of the industry."

M 257, bauxite imports. Imports of bauxite are of great importance: exports are insignificant.

For 1934–1950, the figures are in terms of "dried bauxite equivalent," an adjustment in the Department of Commerce series made by the Bureau of Mines. Figures entirely adjusted to the dried bauxite equivalent are not available for other years. However, for 1952–1970, figures for imports from Jamaica (which have a high moisture content) have been adjusted and the remaining imports presumably include only a small amount of undried bauxite.

M 258, aluminum primary production. For 1896–1906, figures represent fiscal years ending August 31. Production for September–December 1906 totaled 2,734 short tons.

M 259–260, aluminum secondary production. Total secondary production represents recoverable content from both old and new scrap processed. For 1954–1970, figures represent recoverable aluminum content and are not strictly comparable with those for previous years which are for recoverable aluminum-alloy content.

M 261, aluminum imports, crude and semicrude. Aluminum imports include metals and alloys, crude; scrap; and plates, sheets, bars, etc. Figures are for "imports for consumption" for all years except 1911–1912, for which they represent "general imports."

Although a significant quantity of crude and semicrude aluminum has been exported in recent years, export data are not shown here as the United States is normally a net importer of aluminum.

M 262, aluminum, price of primary ingot. Represents average price of primary ingot in New York City.

M 263, magnesium, primary domestic output. For 1915–1938, data are for new ingot sold or used; for 1939–1970, figures represent production. For 1943–1944, magnesium content of incendiary mixtures produced directly is excluded.

M 264–265, magnesium, secondary domestic output. Secondary production of magnesium is expressed in terms of ingot equivalent and represents the recoverable magnesium and magnesium-alloy content of scrap processed. Total secondary output includes recoverable content of both old and new scrap processed.

M 266, primary uranium oxide (U_3O_8) production. Production data for 1911 through 1941 are estimated U_3O_8 content of ores shipped from mines in the western United States. During these years, the ores were mined essentially for radium and/or vanadium, and uranium was a byproduct. Production statistics were withheld during and immediately following World War II. For the postwar period, 1948 through 1970, production data are based on mine output statistics, provided by the U.S. Atomic Energy Commission (AEC), to which mill recovery factors were applied, giving recoverable content of ore.

M 267, imports of uranium oxide (U_3O_8). Data are not available on imports during 1910 through 1914; imports may have been very small during these years. For 1915 through 1922, available data were by value of imports only. For 1923 through 1946, data are imports for consumption; for the years 1947 through 1952, import statistics were withheld at the request of the AEC: in the post-1952 period, imports have been largely for AEC stockpiles. Pursuant to subsection 161 V of the Atomic Energy Act of 1954, as amended, foreign uranium cannot be imported for private domestic consumption.

M 268–269. Gold and silver production, **1792–1970.**

Source: 1792–1834 and 1845–1903, U.S. Bureau of the Mint, *Annual Report of the Director of the Mint,* 1910, p. 99; series **M 268,** 1835–1844, U.S. Bureau of Mines, *Economic Paper No. 6,* R. H. Ridgway, "Summarized Data of Gold Production," 1929, p. 14; series **M 269,** 1835–1844, Bureau of Mines, *Economic Paper No. 8,* C. W. Merrill, "Summarized Data for Silver Production," 1930, p. 18; 1904–1938, Bureau of Mines, unpublished data; 1939–1970, see general note for series M 13–306.

For 1792–1903, figures represent production measured at the refinery stage; for 1904–1970, they represent production measured at the mining stage. For 1904, production measured at the refinery stage was 3,892,000 troy ounces for gold and 57,683,000 troy ounces for silver. The refinery figures are from the Bureau of the Mint and measure the metal from domestic ores and concentrates actually recovered in marketable form. The mine output figures are from the Bureau of Mines and measure the recoverable gold and silver content of domestically produced ores, concentrates, and bullion. Differences between the two series primarily result from time lags between the two stages of production. Other differences exist because of the difficulty at the refining stage of determining the domestic or foreign origin of the ore. The Bureau of Mines figures are defined as "calculated upon the basis of recovered or recoverable fine gold and silver shown by assays to be contained in ore, bullion, and other material produced." *(Minerals Yearbook,* 1950, p. 564.) Bureau of the Mint data are defined as "official estimates of production of gold and silver in the United States. . . based upon arrivals at U.S. mints and assay offices and at privately owned refineries" (same source, p. 580).

Data include both lode and placer production. The weight unit for both gold and silver is the fine troy ounce of 480 grains. No price series is shown for gold. In 1934, its official value was changed from $20.67 to $35 per fine ounce.

M 270. Silver, New York average price, **1850–1970.**

Source: 1850–1883, U.S. Bureau of Mines, *Mineral Resources of the United States,* 1929, vol. I, p. A 123; 1884–1956, American Bureau of Metal Statistics, *Yearbook,* 1958, and *Yearbook,* 1956, New York, 1934 and 1957, respectively (copyright); 1957–1970, U.S. Bureau of Mines, *Minerals Yearbook,* annual volumes.

The U.S. Treasury no longer regularly buys domestically mined silver at a fixed price (in 1954, $0.9050505 per fine ounce). However, it remains committed to buy silver from domestic mines (since 1965) if offered at $1.26 an ounce. For more complete information, see Bureau of Mines, *Mineral Facts and Problems,* Bulletin 650.

M 271–276. Injuries and fatalities in all coal mining, **1870–1970.**

Source: U.S. Bureau of Mines, series **M 271–274,** 1870–1929,

Injury Experience in Coal Mining and its predecessor, Coal-Mine Accidents in the United States; series M 271–274, 1930–1966, and series M 275–276, 1870–1966, Injury Experience in Coal Mining, 1966, Information Circular No. 8419; series M 271–276, 1967–1970, Bureau of Mines, Minerals Yearbook, annual volumes and unpublished data.

M 271–272, injuries, fatal and nonfatal. The Bureau of Mines began gathering information on nonfatal injuries in 1930. Data on number of fatalities go back to 1870 for anthracite and to 1874 for bituminous coal. Availability of information on fatalities for the 19th century and the early years of the 20th century depended on the existence of State records, which, in turn, depended mainly on whether the States had mine inspection services.

For 1870–1909, the record of fatalities is incomplete for bituminous coal. For example, coverage of Pennsylvania bituminous coal mines does not begin until 1877. Records for Maryland and Ohio extend back to 1876 and 1874, respectively, while partial records are available for Virginia as early as 1839. Incompleteness since 1870 applies only to bituminous coal. Pennsylvania anthracite records are complete since 1870, with partial data available for 1847 and 1869 (Bureau of Mines Bulletin No. 115, pp. 7, 9, 105). By 1890, the fatality records cover almost 90 percent of all production; between 1895 and 1900, about 95 percent; and between 1901 and 1909, in the neighborhood of 98–99 percent.

Additional detail is available in the source bulletins as to the causes of injury. Information is also shown classifying the nonfatal injuries into the categories of "permanent total disability," ''permanent partial disability," and "temporary total disability."

M 273–276, frequency rates, fatal and nonfatal. The employment statistics used in deriving the injury and fatality frequency measures since 1890 are based on canvasses conducted by the Bureau of Mines (or the Geological Survey) with occasional figures from the Census of Mineral Industries. Although these underlying employment data are not presented here, they are available in the source bulletins. For almost all years between 1890 and the early 1930's, the underlying employment figures are those shown in series M 107–110 and M 130–133. In subsequent years, separate employment figures, collected on accident canvasses, were used for deriving the frequency rates. The latter employment figures differ somewhat from those shown in the bituminous and anthracite series (series M 107–110 and M 130–133). For 1870–1889, the frequency rates are based on employment statistics collected by the States; these statistics were less complete and presumably less accurate and comparable than those resulting from the Bureau's own canvasses in subsequent years.

M 273–274, frequency rates per million man-hours, fatal and nonfatal. The figures on man-hours of employment on which these ratios are based were derived as follows: Producers began reporting man-hours of employment to the Bureau of Mines in 1930, but during the early 1930's many mines left the man-hours question unanswered and even in the 1940's the man-hours were not always reported. For those mines not reporting man-hours, the Bureau estimated the figure by multiplying the average number of employees (active period average) by the number of days on which the mine was active, and then multiplying the product by the number of hours constituting a standard work shift in the particular mine. This method, with certain variations, was used by the Bureau to estimate man-hours in all years prior to 1930, when no direct information on man-hours was collected. Estimated man-hours, although reasonably accurate, suffered from two major shortcomings: (1) The number of active days was generally determined by the number of days on which the tipple was active, omitting days on which no coal was brought to the surface, although on such days men were often employed underground in loading coal or in repair or maintenance work; and (2) the standard work shift did not apply to all occupations and many miners were irregular in observing standard working hours (see source, Bulletin 380, pp. 8–9, and Bulletin 283, p. 64).

The 1943 bituminous coal mine wage agreement made portal-to-portal time the basis for pay rather than face or working time hours. Since 1944, only portal-to-portal man-hours have been reported, Conversion factors were applied to man-hour data for underground bituminous coal employees back to 1930. No such adjustment was made, however, for surfacemen at underground mines or strip mine employees in the bituminous coal industry. No adjustment was deemed necessary in the anthracite industry.

M 275–276, fatalities per 1,000 300-day workers, and per 1,000 employed. The 300-day worker basis was derived by converting the average number of employees (active period average) according to the ratio between active mine days and 300 days. For the very early years, information on active days was not available; therefore the simple measure of fatalities per 1,000 was used.

For 1888 and earlier years, corresponding employment data are not available for all recorded fatalities. The rates are based on fatalities for which corresponding employment data do exist. Apparently, comparable fatality and employment data exist for all Pennsylvania anthracite back through 1870.

Source bulletins also show fatality rates per million tons mined.

M 277–280. Injuries and fatalities in quarrying and related industries, 1911–1970.

Source: U.S. Bureau of Mines, 1911–1960, Injury Experience in the Quarry Industry, Information Circular No. 8171, 1960; 1961–1970, Minerals Yearbook, annual volumes, and unpublished data.

Separate figures are shown in the basic source according to the kind of rock produced and also for stone classified as dimension and nondimension. Nondimension stone includes all stone used in unshaped or irregular form, as for roadbuilding and cement and lime manufacture; dimension stone includes all stone that is cut or shaped for building or monumental purposes. By far, the major share of employment is in nondimension stone. The figures also cover crushing, screening, rock dressing, and the manufacture of cement and lime, insofar as these operations are conducted by the quarry companies; except for crushing and screening, these operations are classified as manufacturing in the Standard Industrial Classification Manual. On the other hand, quarries producing sand, gravel, and clay are excluded.

The source states that the data are comparable only since 1916 because information reported for prior years was obviously incomplete as to number of injuries, especially those causing disability for only one or two days. Additional detail is available in the source as to the causes of injuries. Also included is the classification of nonfatal injuries into the categories of "permanent total," "permanent partial," and "temporary total." The last category is further divided, for 1915–1929, into the subclasses, "temporary disabilities lasting more than 14 days" and "temporary disabilities lasting more than the remainder of the day on which the accident occurred, but not exceeding 14 days."

The employment data used in deriving the injury and fatality frequency measures are comparable with the injury data. However, they must be carefully evaluated before they are used for other purposes. For an extensive discussion of the inadequacies of the underlying employment data, see Barger and Schurr, cited in the text for series M 13–37, especially appendix C, pp. 377–393.

M 281–286. Injuries and fatalities in metal and nonmetal mining, 1911–1970.

Source: U.S. Bureau of Mines, 1911–1954, Injury Experience in the Metal and Nonmetal Industries, and its predecessors: Metal and Nonmetal Mine Accidents in the United States and Metal Mine Accidents in the United States; 1955–1970, Minerals Yearbook, annual volumes, and unpublished data.

Employment and injury data for metal and nonmetal mines have been compiled from voluntary reports collected by the Bureau of Mines annually since 1911.

Separate figures are shown in the basic source by type of mining method. Over the entire period, there have been numerous changes in the classification systems used. In addition, data are given by kind of mine, as follows: Copper, iron ore, lead-zinc, gold-silver lode,

gold placer, miscellaneous metal mines, and nonmetal mines. Included under miscellaneous metal mines are those working ores of quicksilver, manganese, tungsten, vanadium, chromium, and other metals plus pyrite mines (the cinder is used in metallurgical works for its iron and copper content) and bauxite mines (the primary source of aluminum). The nonmetallic group includes mines that produce asbestos, asphaltum, barite, borax, emery, feldspar, fluorspar, garnet, graphite, gypsum, lithium, magnesite, mica, mineral paint, phosphate rock, potash, quartz, salt, soapstone, sulfur, talc, and tripoli.

Additional detail is available in the source bulletins as to the causes of injuries, and information is shown subclassifying the nonfatal injuries. For 1911–1914, nonfatalities were simply divided into "serious"—of more than 20 days duration, and "slight"—of more than 1 but less than 20 days duration. For 1915–1919, temporary injuries were separated into "serious"—of more than 14 days duration, and "slight"—of more than 1 but less than 14 days duration. For 1930–1970, nonfatalities have been recorded as temporary or permanent with the latter subdivided into total and partial disability.

Injury data for 1931–1965, have been published in *Injury Experience in the Metallic Mineral Industries, 1965,* Information Circular, 8433 and *Injury Experience in the Nonmetallic Mineral Industries* (except stone and coal), *1964–65,* Information Circular 8481. These sources show data for men employed, average days active, and man-days and man-hours worked, as well as data for fatal and nonfatal injuries and frequency rates at mines and mills.

Frequency rate measures were originally expressed per 1,000 men employed. Shortly thereafter, in an attempt to secure a uniform time basis for comparison, the Bureau of Mines began to express all frequency rates on a 300-day worker basis (derived by converting the average number of employees on active days according to the ratio between active mine days and 300 days). These rates were extended back through 1911. Rates per million man-hours of exposure are not available prior to 1931 in the reports, although partial man-hour data by length of shift are available from 1921–1930.

The employment data used in deriving the injury frequency measures are comparable with the fatality and injury records. However, they do not necessarily reflect total employment within the industry. Despite incomplete coverage, the data are considered by the Bureau to be representative of hazard exposure.

M 287-296. Average number **of** men working daily in mineral industries, 1911–1970.

Source: **U.S.** Bureau of Mines, series M 287, 1911–1929, *Coal-Mine Accidents in the United States,* annual issues; 1930–1966, *Injury Experience in Coal Mining, 1966,* p. 97; and 1967–1970, *Minerals Yearbook,* annual issues. Series **M** 288, *Injury Experience and Worktime in the Coke Industry, 1970,* p. 13. Series M 289, *Disabling Work-Injury Experience of the Oil and Natural Gas Industry in the United Stales, 1970,* p. 7. Series **M** 290 and M 294, 1931–1965, *Injury Experience in the Metallic Mineral Industries, 1965;* and 1966–1970, Mineral Industry Surveys, *Injury Experience and Worktime in the Mineral Industries,* annual issues. Series **M** 291 and **M** 296, 1931–1965, *Injury Experience in the Nonmetallic Mineral Industries, 1964–65;* and 1966–1970, Mineral Industry Surveys, *Injury Experience and Worktime in the Mineral Industries,* annual issues. Series **M** 292, *Injury Experience and Worktime Data on Sand and Gravel Operations in the United States, 1958–70.* Series M 293, 1911–1960, *Injury Experience in Stone Quarrying, 1961;* and 1961–1970, Mineral Industry Surveys, *Injury Experience and Employment Data in the Stone Quarrying Industries,* annual issues. Series **M** 295, 1942–1965, *Injury Experience in the Metallic Mineral Industries,* annual issues; and 1966–1970, Mineral Industry Surveys, *Injury Experience and Worktime in the Mineral Industries,* annual issues.

"Men working daily" is obtained from mail canvasses of mineral mining and processing establishments started by the Bureau of Mines for health and safety information in the respective years shown in each column. The data throughout each series are in general agreement with the Standard Industrial Classification (SIC) system (see general note for series P 1–874), although separated into subclassifications so as to more closely fit accident hazards and statistics. Coverages of the industry groupings are complete subsequent to 1915 but some doubts are expressed in the early reports as to completeness of coverages during 1911–15. The sole exception *to* the foregoing is petroleum and natural gas (series M 289) for which the data do not follow the SIC but rather cover all activities of the reporting companies from the exploration through drilling, production, refining, all transportation, all marketing, research and engineering. Further, the data represent totals from the reports received and no attempt has been made to extrapolate for complete coverage or to estimate percent of coverage. The numbers of both on-site and central office-workers are excluded in all series except for petroleum and natural gas where such employment is included and is not separable.

The series for coke (series M 288), petroleum and natural gas (series M 289), and primary nonferrous smelters and refineries (series M 295) end with 1970; Bureau of Mines responsibilities for safety in these industries was transferred to the U.S. Department of Labor.

M 297–306. Man-hours **worked** in mineral industries, 1911–1970.

Source: Series M 297, see source for series M 287; series M 298, see source for series M 288; series **M** 299, see source for series M 289; series M 300 and **M 304,** see source for series M 290 and M 294; series **M** 301 and **M** 306, see source for series M 291 and M 296; series **M** 302, see source for series M 292; series **M** 303, see source for series M 293; and series M **305,** see source for series M 295.

Producers began reporting man-hours of worktime to the Bureau of Mines in 1930, but during the early 1930's many mines left the man-hours question unanswered and even in the 1940's the man-hours were not always reported. For those mines not reporting man-hours, the Bureau estimated the figure by multiplying the average number of employees (active period average) by the number of days on which the mine was active, and then multiplying the product by the number of hours constituting a standard work shift in the particular mine. This method, with certain variations, was used by the Bureau to estimate man-hours from reported men working, days active, and length of shift by departments of the establishment in all years prior to 1930, when no direct information on man-hours was collected. Estimated man-hours, although reasonably accurate, suffered from two major shortcomings: **(1)** The number of active days was generally determined by the number of days on which there was production; this omitted days on which no material was mined, although on such days men were often employed in development or in repair or maintenance work, and **(2)** the standard work shift did not apply to all occupations, and many miners were irregular in observing standard working hours (see U.S. Bureau of Mines, Bulletin 380, pp. 8–9; and Bulletin 283, p. 64).

The man-hours in each series, except coal mines (series M 297), whether reported or estimated, represent worktime for which pay was received and during which the employee was exposed to work hazards. Shifts started and ended at or close to the portal of a mine or plant. However, in coal mines prior to 1944, shifts started and ended at the working place. In underground workings, measurable lengths of time, for which no pay was received, were required to travel from the mine portal to the workplace and return. The November 1943 bituminous coal mine wage agreement made portal-to-portal time the basis for pay rather than face or working time hours. Since 1944, only portal-to-portal man-hours have been reported. Conversion factors, determined from a mail canvass for average travel time in 1944, were applied to man-hour data for underground bituminous employees back to 1930. No such adjustment was made, however, for surfacemen at underground mines or strip mine employees in the bituminous industry. No adjustment was deemed necessary in the anthracite industry (Bulletin 509, pp. 4–5). Hence, for coal mines (series M 297), man-hours for 1911–29 represent time at the working face whereas, beginning in 1930, they represent portal-to-portal or exposure time.

Series M 1–12. Summary of Mineral Operations: 1840 to 1967

[In general, includes data for mining operations at manufacturing establishments. For all years prior to 1935, excludes common clay, shale, and peat (except as noted) and contract service operations; for years prior to 1929, excludes sand and gravel operations and crushed stone quarries at manufacturing plants, except as indicated]

Industry group and year	Number of establishments	Value of shipments and receipts (mil. dol.)		Value added by mining (mil. dol.)	Number of persons engaged			Principal expenses (mil. dol.)			Capital expenditures (mil. dol.)	Aggregate horsepower rating of power equipment (1,000)
		Gross shipments	Net shipments		Production and development workers (1,000)	All other employees (1,000)	Man-hours of production, development, and exploration workers (millions)	Wages of production, development, and exploration workers	Salaries of all other employees	Cost of supplies, etc., and purchased machinery installed [2]

NA Not available. Z Less than $500,000.

[1] Includes the estimated value of minerals produced and used in the same establishment in making manufactured products.

[2] For 1939 and years prior to 1929, excludes purchased machinery installed.

[3] First year that data for single unit establishments without paid employees were excluded from the census. For 1963, for mining as a whole, included 6,543 such establishments, accounting for approximately 3 percent of value added. The number of such establishments in 1963 for metal mining was 460; for coal mining, 1,347; for oil and gas extraction, 3,714; and for nonmetallic minerals (except fuels), 1,022.

[4] Includes gross shipments for ferroalloy ores and metallic ores, n.e.c. In 1963, the difference between gross and net shipments for these industries was $8 million.

[5] Excludes Alaska.

[6] Operators of mineral properties reported an average of 8,527 employees performing contract service Operations for metal mines: 6,906 for coal mines; 12,143 for oil and gas field operations; and 592 for nonmetallic minerals (except fuels). These are not included in the employment series shown.

[7] Figures for average employment converted to a 300-day basis for establishments operating for a shorter period.

[8] "All other" employees included with production and exploration workers.

[9] Excludes the uranium–radium–vanadium ores industry.

[10] Represents number of mining operations and service establishments.

[11] Except for number of establishments, includes 27 nonproducing establishments in the nonmetallic minerals mining industries.

[12] Except for number of establishments. excludes 1 chromite mine in Alaska.

[13] Except for number of establishments, includes 2 producing and 18 nonproducing establishments in the nonmetallic minerals mining industries.

[14] Excludes the manganese ores industry.

[15] Excludes the placer gold industry.

[16] Represents producing operations only.

[17] Excludes anthracite stripping services.

[18] Includes 9,920 "Local mines and farmers' banks," producing about 2 percent of all bituminous coal and lignite, for which no data are available on labor and expenditures.

[19] Includes 5,148 bituminous coal and lignite mines, producing coal valued at $1.1 million, representing "irregular" operations for which no other data are available.

[20] For 1954 and 1939, no data obtained on value of gas received for processing at natural gas liquids plants or on value of residue gas sold or transferred. However, for 1954 estimated value (prior to processing) of natural gas liquids contained in such gas was'inrluded with value of natural gas liquids received for processing and used in computing value added. No figures for value of residue gas are included in the value of shipments and receipts shown for 1954. For 1939, cost of supplies, purchases for resale and purchased fuels and electric energy for all oil and gas extraction industries include estimated cost of such items and subcontract work to oil and gas field services industries, for which such data were not requested in 1939. These estimates used in computing value added for such industries. For Alaska in 1958 and 1954, cost of supplies, purchased fuels and electric energy, contract work, and purchased machinery installed exceeded value of shipments and capital expenditures.

[21] Represents number of operating companies.

[22] Excludes natural gas operations.

[23] Reported as "oil, coal" and probably includes some refining as well as production of crude petroleum, or may represent primarily recovery of oil from coal.

[24] Includes operations which are parts of manufacturing establishments.

[25] For purchased machinery, capital expenditures, and horsepower. excludes data for crushed and broken stone, sand and gravel, clay, and gypsum mining operations in manufacturing establishments. Also, for horsepower in 1963 excludes data for dimension stone establishments in manufactures.

[26] Excludes sand and gravel mining operations in manufacturing establishments. Value of sand and gravel mined and sold or used at such establishments in 1954 was $22.8 million.

[27] Except for value of shipments and value added, excludes dimension stone dressing plants operated in conjunction with quarries. Value added in dressing stone at such operations, $7.9 million, has been included in value of shipments and value added in mining.

[28] Excludes common clay and shale and peat operations. In 1939, there were 609 such mines with products valued at $6.3 million. Also excludes 27 nonproducing establishments.

[29] Except for number of establishments, excludes 1 gypsum mine and 1 marble mine in Alaska.

[30] Excludes 19 nonproducing establishments.

[31] Includes lime plants producing lime valued at $9.3 million.

Series M 13–37. Value of Mineral Products, in Current Dollars: 1880 to 1970

[In millions of dollars]

NA Not available. Z Less than $500,000.

[1] Includes additional mineral products not shown separately; therefore, components frequently will not add to group totals. [2] Excludes natural and slag cement.

[3] Value of clays used in cement is included here, but excluded from total nonmetals (series M 20) to avoid duplication.

[4] Only incomplete figures available; included in total nonmetals.

[5] Not available separately: included with value of stone (series M 26).

[6] Beginning 1954, sand and sandstone (ground) included with series M 25 (sand and gravel) and M 26 (stone), respectively. [7] Includes value of stone used for cement or lime, excluded from total nonmetals (series M 20) to avoid duplication.

Series M 38–53. Value of Mineral Production, Imports, Exports, and Consumption in Constant (1967) Dollars: 1900 to 1969

[In millions of dollars. Includes Alaska and Hawaii for all years]

NA Not available.
[1] Beginning 1954, covers auger mining only.
[2] Includes lake vessels beginning 1933.
[3] Includes idleness from stoppages which began in previous year.

Series M 123–137. Pennsylvania Anthracite—Production, Value, Foreign Trade, Producers' Stocks, Employment, Strikes, and Mechanization: 1808 to 1970

Year	Production			Average value per ton, f.o.b. mine	Foreign trade		Net change in producers' stocks [1]	Employment					Man-days idle because of strikes	Mechanization, underground	
								Average workers on active days				Average days worked			
	Total	Underground	Strip		Exports	Imports for consumption		Total	Underground	Strip	Other surface			Cut by machines	Loaded by machines

NA Not available.

[1] Includes pumping, drilling, extraction loss (shrinkage), and plant fuel.

[2] Consumption by electric public utility power plants includes small quantities of gas other than natural, impossible to segregate. To this extent, consumption by other industrials is understated.

[3] For 1964–1967 includes natural gas to enrich hydrocarbons.

[4] Included in "dther industrial" prior to 1950.

[5] Included in "Other industrial" prior to 1931.

NA Not available. Z Less than 500 long tons.

[1] Includes elemental Frasch and recovered imports.

[2] Not strictly comparable with years prior to 1954 or after 1957. Esdmated comparable totals should include an additional 232,920 long tons in 1954; 277,860 in 1955; 292,520 in 1956; and 282,000 in 1957.

[3] Tonnage calculated from combined total of domestic sulfur and sulfur content of pyrites produced.

[4] Quantity derived from figures in metric tons (*Mineral Resources of the United States, 1908*).

Series M 205–220. Iron Ore and Pig Iron: 1799 to 1970

[Quantities for iron ore in thousands of lone tons; for pig iron, shipments in thousands of long tons; imports and exports in thousands of short *tons]*

Year	Iron ore												Pig iron			
	Production	Shipments			Price (Mesabi, non-Bessemer, per long ton	Foreign trade		Production by mining method [1]		Employment			Shipments	Average price per long ton [2]	Import	Exports
		Quantity		Average value per long ton						Average workers in active days	Average days worked	Average hours per shift				
		Total	Beneficiated			Imports	Exports	Underground	Open pit

NA Not available.

[1] Beginning 1942, represents mine production of crude iron ore before treatment for removal of wastes.

[2] 1903–1970, bas f.o.b. Valley furnaces; 1844–1907,). 1 Foundry Ph delphia; 1799–1843, charc al pig iron. See text for minor vari; ons within tde pe ds.

[3] Preliminary.

Series M 221–234. Ferroalloying Metals—Manganese, Chromite, Tungsten, Molybdenum, Vanadium, and Nickel: 1868 to 1970

[Quantities in short tons, metallic content, except where specified as gross weight]

Year	Manganese ore (35% or more Mn) (gross weight): Domestic output	Manganese ore (35% or more Mn) (gross weight): Imports	Chromite (gross weight): Domestic output [1]	Chromite (gross weight): Imports	Tungsten concentrates: Domestic output	Tungsten concentrates: Imports [2]	Molybdenum ores and concentrates: Domestic output	Molybdenum ores and concentrates: Exports	Vanadium ores and concentrates: Domestic output	Vanadium ores and concentrates: Imports [3]	Nickel: Production: Primary	Nickel: Production: Secondary	Nickel: Imports	Nickel: Price, electrolytic (cents per pound)

NA Not available.
[1] Cumulative production prior to 1880, 224,000 short tons.
[2] Prior to 1923, gross weight; thereafter, tungsten content.
[3] Prior to 1934, gross weight; thereafter, vanadium content.
[4] Includes 1,773 tons from Cuban concentrate.
[5] Includes imported concentrate.
[6] 35 percent or more manganese; see also text for series M 221 and M 222.

Series M 235–241. Copper: 1845 to 1970

[1] Beginning 1968, delivered price; comparable price for 1967 is 38.1 cents per pound.
[2] Imports of refined copper from Chile, as reported by the Chile Exploration Co., were included by *Mineral Resources of the United States* in place of those of the Bureau of Foreign and Domestic Commerce which were considered too low.
[3] Includes some refined copper imports.

Series M 242–255. Lead and Zinc: 1801 to 1970

Series M 242–255. Lead and Zinc: 1801 to 1970—Con.

[In short tons. except as indicated1

Year	Lead				Zinc				Year	Lead		
	Production, primary, refined from domestic and foreign ores	Imports, refined	Exports, refined	Price, New York, pig lead (cents per lb.)	Production, primary, smelter slab zinc from domestic and foreign ores	Imports, refined	Exports, refined	Price, New York, slab zinc (cents per lb.)		Production, primary, refined from domestic and foreign ores	Exports, refined	Price New' York, pig lead (cents per lb.)

NA Not available.
[1] Includes production of zinc in concentrates used directly in alloying operations.
[2] Includes sheets and pipes; figures not available separately.
[3] Comprises reclaimed scrap; no recorded imports of pigs and bars.
[4] Excludes output of Virginia (Bureau of Mines was not at liberty to publish).
[5] Part of this is foreign lead mistakenly designated by customs collectors as domestic lead.
[6] Derived from Bureau of the Census.
[7] Estimates based on 5-year averages.

Series M 256–267. Bauxite, Aluminum, Magnesium, and Uranium: 1886 to 1970

Year	Bauxite: Domestic output (1,000 long tons)	Bauxite: Imports (1,000 long tons)	Aluminum: Production (1,000 short tons): Primary, from domestic and foreign ores	Aluminum: Production (1,000 short tons): Secondary: Total	Aluminum: Production (1,000 short tons): Secondary: From old scrap	Aluminum: Imports, crude and semi-crude (1,000 short tons)	Aluminum: Price, primary ingot (cents per lb.)	Magnesium, domestic output (1,000 short tons): Primary	Magnesium, domestic output (1,000 short tons): Secondary: Total	Magnesium, domestic output (1,000 short tons): Secondary: From old scrap	Uranium (U_3O_8 content) (short tons): Production [1]	Uranium (U_3O_8 content) (short tons): Imports [2]

1870	[11] 211	5.98

[1] Figures for 1930–1970 are on a portal-to-portal basis; earlier years are on a working-time basis. The 1930 frequency rate for fatalities per million man-hours on a portal-to-portal basis was 1.9, the working-time rate was 2.1.

[2] Includes manufacture of cement and lime.

[3] Man-hours for 1911–1923 computed on assumption that weighted average length of workday was 9.36 hours, as shown by reports from representative operating companies for 1924.

[4] Injury rate for years before 1916 are believed not to be representative, owing to probable incompleteness of reports of slight or minor injuries.

[5] Man-hours not available prior to 1931.

[6] Nonmetal mill data were included for the first time in 1955. Clay mill data were included for the first time in 1956.

[7] Beginning with 1945 metal mill data are included.

[8] Accident reports for mines in the gold, silver, and miscellaneous metal groups are not complete as to nonfatal injuries before 1916.

[9] Data for bituminous and anthracite coal mining. Data for 1906–1909 for bituminous coal cover only the States that maintained complete records of fatal accidents. They represent 98 to 99 percent of the total production of coal in the U.S.

[10] Data for anthracite coal mining only.

[11] Data reflect only Pennsylvania anthracite fatalities; data for bituminous coal mining are not available prior to 1874.

Series M 287–296. Average Number of Men Working Daily in Mineral Industries: 1911 to 1970

[Excludes data on iron smelting and steel industries]

[1] Man-hours for 1930-70 are on a portal-to-portal basis. Prior to 1930, man-hours are on a face-to-face basis.

[2] Beginning 1942, fluorspar mines included with nonmetal mines.

More Recent Data for *Historical Statistics* Series

Statistics for more recent years in continuation of many of the still-active series shown here appear in annual issues of the *Statistical Abstract of the United States*, beginning with the 1975 edition. For direct linkage of the historical series to the tables in the *Abstract*, see Appendix I in the *Abstract*.

Appendix:

Contributors to This Edition of Historical Statistics

[Listed below, by chapter and subject, are the names of persons other than those listed on pp. viii–x, who contributed new or revised data or text additions and revisions to this edition, to the extent they could be identified. In some cases, manuscript was provided for the book without specific identification of the persons engaged in its compilation, preparation, or review]

Subject	Contributor
Chapter A	
State areas	Robert C. Klove, Bureau of the Census
Households and families	Arthur J. Norton and Robert O. Grymes, Bureau of the Census
Chapter B	
Health expenditures	Barbara Cooper, Dorothy P. Rice, and Alfred M. Skolnik, Social Security Administration
Medical care price indexes	Marie Schlegel, Bureau of Labor Statistics
Physicians, dentists, nurses, hospitals	Genevieve Strahan, Public Health Service
Reportable disease rates	W. Jere Housworth, Gladys Reynolds, and William Stewart, Center for Disease Control
Hospitals	Bernard Ferber, American Hospital Association
Mental health care	Richard Walker, Social and Rehabilitation Service, and Shirley G. Willner, National Institute of Mental Health
Nutrition	Kathryn R. Coleman and Berta Friend, Department of Agriculture
Fluoridation	John Small, Public Health Service
Chapter C	
Native population, by residence and place of birth	Larry Long, Bureau of the Census
Intercensal migration	James B. Tarver, University of Georgia
Farm population movement	Vera Banks, Department of Agriculture
Population mobility	Kristin A. Hansen, Bureau of the Census
Immigration and naturalization	Marvin Gibson, Robert G. Prosek, and Nellie W. Schneider, Immigration and Naturalization Service
Citizenship and ethnicity	Karen A. Crook and Nampeo R. McKenney, Bureau of the Census
Chapter D	
Labor force characteristics	Paula J. Schneider, Bureau of the Census
Women in the labor force	Carl Rosenfeld, Bureau of Labor Statistics
Persons with a job but not at work and civilians employed	John Stinson, Bureau of Labor Statistics
Chapter D—Con.	
Employee earnings and wage supplements	F. Beatrice Coleman, Bureau of Economic Analysis
Hours and earnings, selected industries	Gerald Storch, Bureau of Labor Statistics
Wage rates and hours, printing and building trades	John Fitsock and Thomas Mobley, Bureau of Labor Statistics
Engineering salaries	John Alden, Engineering Manpower Commission
Work stoppages	Albert A. Balman and Norman J. Samuels, Bureau of Labor Statistics
Injury rates, selected industries	Joseph Musselwhite, Bureau of Railroad Safety
Chapter E	
Implicit price deflators	Allan H. Young, Bureau of Economic Analysis
Wholesale price indexes	Craig Howell and William Thomas, Bureau of Labor Statistics
Wholesale prices	Joseph A. Clorety, Jr., and Lloyd Wigren, Bureau of Labor Statistics
Retail prices, selected foods	Kenneth V. Dalton, Bureau of Labor Statistics
Retail price indexes, fuels	Richard Bahr and Rod Meany, Bureau of Labor Statistics
Chapter F	
Gross national product and national income	Edward O. Bassett, Jacqueline Bauman, Leo M. Bernstein, John A. Gorman, and Jack J. Gottsegen, Bureau of Economic Analysis
National wealth and saving	Helen S. Tice, Board of Governors of the Federal Reserve System
Nonresidential and residential capital	Bruce Levine, John C. Musgrave, and Robert C. Wasson, Bureau of Economic Analysis
Individuals' saving	Jeannette M. Honsa, Securities and Exchange Commission
Chapter G	
Money income distribution	Robert W. Cleveland and Mary F. Henson, Bureau of the Census
Personal income distribution	Daniel B. Radner, Bureau of Economic Analysis
Consumption expenditures of farm families	Frances M. Magrabi, Department of Agriculture
Per capita food consumption	Kathryn R. Coleman, Department of Agriculture

Appendix: Contributors to This Edition—Con.

Subject	Contributor
Chapter H	
Workers covered under social insurance programs	John E. Bregger, Bureau of Labor Statistics
Old-age, survivors, disability, and health insurance	Harry Shulman, Social Security Administration
Civil Service retirement	Stewart C. Reiman and Edwin Hustead, Civil Service Commission
Railroad retirement	Samuel A. Block and Robert B. McNab, Railroad Retirement Board
Unemployment insurance	John Hunter and T. James Walker, Manpower Administration
Public and old-age assistance	Harold Coleman, Anne L. Henneman, and Sigmund Schor, Social and Rehabilitation Service
Child health and welfare programs	Donald A. Trauger, Public Health Service
Vocational rehabilitation	Althea H. Peters, Social and Rehabilitation Service
Private philanthropy	Ralph L. Nelson, Queens College
School enrollment and years of school completed	Charles E. Johnson, Jr., and Larry E. Suter, Bureau of the Census
Catholic schools	Frank H. Bredeweg, National Catholic Education Association
Doctorates	David W. Breneman and Clarebeth M. Cunningham, National Research Council
Roman Catholic membership	Arthur R. Kenedy, P. J. Kenedy & Sons
Protestant Episcopal membership	E. Allen Kelley, Morehouse-Gorham Co.
Methodist membership	John L. Schreiber, The United Methodist Church
Southern Baptist membership	Wilmer C. Fields, Southern Baptist Convention Press
National parks	Jacob Bassan, National Park Service
Recreational use of national forests	William Everard and Gordon R. Sanford, Forest Service
State parks	Diana Dunn, National Recreation and Park Association; Merle Van Horne, National Park Service
Bowling	Bruce Pluckhahn, American Bowling Congress
Horseracing	A. E. Clark and Warren D. Schweder, The National Association of State Racing Commissioners
Baseball	David J. Grote, The National League of Professional Baseball Clubs; John J. Sheehan, The American League of Professional Baseball Clubs
Chapter H—Con.	
Boxing	Nat Fleischer, The Ring
Personal expenditures for recreation	Edward O. Bassett, Bureau of Economic Analysis
Passports	Emil W. Kontak and Eleanor L. Schwartz, Passport Office
Foreign visitors	Etienne H. Miller, Bureau of Economic Analysis
Homicides and suicides	Robert J. Armstrong, Public Health Service
Arrests	Walter Crone, Federal Bureau of Investigation
Juvenile Court	Louise T. Jackson, Public Health Service
Juvenile delinquents	Arthur J. Norton, Bureau of the Census
Prisoners	Donald Miller, Bureau of Prisons
Chapter J	
Territorial acquisition	G. C. Gardner, Jr., and Kenneth W. Knox, General Services Administration
Public lands	Julia Angel and Fred Heine, Bureau of Land Management
Indian lands	Betty Jo Counselman, Bureau of Indian Affairs
Livestock grazing on national forest land	Elizabeth Truhan, Forest Service
Oil and gas leases	John Duletsky and Walter Harris, Geological Survey
Land area, use, and ownership	H. Thomas Frey and Howard L. Hill, Department of Agriculture
Land drainage and irrigation	Earl R. Franklin, Bureau of the Census
Water wells	Ruth C. Knape, Bureau of Domestic Commerce
Climate	Dick M. Whiting, National Climatic Center
Tornadoes, floods, cyclones	Richard M. DeAngelis, National Oceanic and Atmospheric Administration
Chapter K	
General note on agricultural statistics	John E. Cochrane and Joseph Reis, Department of Agriculture
Agriculture census data	Thomas D. Monroe, Bureau of the Census
Farm property and real estate	Ivery D. Clifton, Department of Agriculture
Farm employment, wages, and man-hours	Jennie Frederick, James R. Garrett, and Donald D. Durost, Department of Agriculture
Fertilizer and lime	David N. Harrington, Department of Agriculture

Appendix: Contributors to This Edition—Con.

Subject	Contributor
Chapter K—Con.	
Balance sheet and country bank deposits	Carson D. Evans, Department of Agriculture
Farm income and expenses	Earl E. Miller, Department of Agriculture
Farm-to-retail price spreads	Henry T. Badger, Department of Agriculture
Farm mortgage debt, loans, interest	Nan Mitchem, Department of Agriculture
Farm property taxes	Jerome M. Stam, Department of Agriculture
Supply and utilization of farm food commodities	Rachel Modina, Department of Agriculture
Farm productivity	Polly Dunn, Earle Gavett, and Donald D. Durost, Department of Agriculture
Crop areas, production, prices, stocks	Dorothy Majors, Department of Agriculture
Livestock	Madge Cobb, Department of Agriculture
Poultry and eggs	Irene Wilkinson, Department of Agriculture
Chapter L	
Forest land and timber industries	William Everard and Robert B. Phelps, Forest Service
Lumber and lumber products	Rosemary Keesling, Forest Service
Paper and board	Benjamin Slatin, American Paper Institute
Chapter L—Con.	
Newsprint	Leo V. Barry, Jr., Bureau of Economic Analysis
Wholesale price indexes	Craig Howell, Bureau of Labor Statistics
Fish and fishery products	Hoyt A. Wheeland, National Marine Fisheries Service
Landed catch, Pacific Coast States	Bernard E. Skud, International Pacific Halibut Commission
Chapter M	
General review	Arthur W. Berger, Bureau of Mines
Operations summary, production, trade	John P. McNamee, Bureau of the Census
Mineral production indexes	Mary H. Hillard, Board of Governors of the Federal Reserve System
Mineral energy fuels and waterpower	Charles R. Readling, Bureau of Mines
Petroleum and natural gas	William B. Harper, Bureau of Mines
Petroleum products	William G. Carrico and Charles Hennig, Bureau of Mines
Nickel	Horace T. Reno, Bureau of Mines
Uranium	Walter C. Woodmansee, Bureau of Mines
Silver	John R. Welch, Bureau of Mines
Employment, manhours, accidents	Forrest T. Moyer, Bureau of Mines

Time Period Index

[Entries are series numbers. Each statistical series has been allocated to the time period for which the earliest figure in the series appears. For most series, an entry for a given time period means that the figures are presented for that and all later time periods]

Paraguay, U.S. grants and credits ... 873, 875
Parents, OASDHI benefits ... 348
Parimutuel turnover ... *394*, 399
Personal consumption expenditures ... 401
Parity ratio, farming ... *475*, 488, 489
Parks ... *393*, *394*, 396–399
Parks and recreation, expenditures ... 1121, 1128, 1184
Parkways, national ... 396
Parochial schools, philanthropic receipts ... 359
Parole, persons on ... 421
Partnerships ... *908*, *909*, 911
Manufactures, summary ... *660*, 688
Passenger arrivals and departures ... *104*, 119, 120

Passenger car dealers, retail trade ... 844, 848, 849
Passenger-cargo vessels ... 752
Passenger traffic:
Intercity, volume ... 707
Output indexes ... *703*, 709
Public transit ... *705*, *706*, 721
Passenger vehicles (*see also* Automobiles *and* Motor vehicles):
Factory sales ... 716
Motor-fuel usage ... 716
Output for domestic consumption ... 700, 701
Purchases, financing methods ... 717
Speed ... 718
Travel, mileage ... 718
Passengers:
Air ... 769, 770
Arrivals and departures ... *104*, 119, 120
Public transit ... 721
Railroad ... 727
Ship ... *742*, 748

Passports ... *395*, 402
Pasture and grazing land ... *426*, 433, *450*, 457
Patents:
Applications and issuances ... *955*, 957–959
Public lands ... *424*, 428, 429
Patients:
Hospitals ... *70–72*, 80, 81, 84, 85
Veterans ... *1133*, 1150, 1151
Pattern and model makers ... 142
Pauper appeals and petitions ... 417
Payments:
Aggregate, distribution ... *221*, 238
Government, farm ... *474*, 480–482, 487
International ... *858–861*, 864–868
Public assistance ... 356, 357

Payrolls (*see also* Salaries, wages, etc.):
Covered by social insurance programs ... *334*, 342
Government ... *1087*, *1088*, 1101
Manufacturing industries ... *653*, 666
By industry group ... 669–680
By legal organization ... 687, 688
Retail trade ... 841, 843
Service industries ... 841, 854
Wholesale trade ... 841, 850
Peace and Freedom Party, presidential votes ... 1073
Peanuts:
Acreage, production, price ... 515, 516
Consumption ... *315*, 331
Farm marketings ... 486
Pearlash, colonial exports ... 1183
Peas and beans:
Colonial exports ... 1184
Component of colonial diet ... 1175
Pennsylvania. *See* State data *and* Anthracite.

Pension and retirement funds (*see also* Old-age, survivors, etc.):
Benefits and beneficiaries ... *335*, 345, 346
Corporate equities market ... 987
Employer contributions ... *155*, *156*, 174, 175
Expenditures ... *332*, *333*, 340
National balance sheet ... 253
Personal savings in ... 267
Private nonbank holdings ... 984
Private plans ... *337*, 353, 354
Assets ... 985, 986
Reserves ... 264, 266, 977, 979
Veterans ... *1137*, *1138*, 1147–1149
Workers covered ... 342
People's Party, presidential votes ... 1073
Perch, catch ... 556, 557

Periodicals:
Advertising (magazine) ... 855–857
Copyright registrations ... *954*, 956, 957
Number and circulation ... 809, 810
Output per man-hour ... 951
Perishable goods:
Price indexes ... 702
Value of output ... 699
Personal business expenditures ... 316–319
Personal care:
Consumer price indexes ... 210, 211
Expenditures, consumer ... 316–327
Personal consumption expenditures ... *218*, 229, *306–313*, 316, 327

Production indexes 668, *946*, 950–952
Products:
Refined, output *662*, 691, 692
Waterborne traffic 763
Refining, output per man-hour 950
Research and development 966
Value *565*, 582, 583
Wholesale trade 852

Petroleum refining, output per man-hour 950
Pharmacists 140
Philadelphia:
Colonial shipping 1181
Coal exports and imports 1184
Communication rates 784, 790
Wage rates *147*, 163
Wholesale price indexes *187*, *188*, 205, 206
Wholesale prices, colonial times *1166*, 1197
Philanthropy *339*, 359
National health expenditures 74
Philippines:
Accession date and area 428
Immigration from 107, 108
Population *4*, 9
U.S. grants and credits 873, 875

Philosophy, psychology books published *803*, 808
Phonographs shipped 695, 696
Phosphate rock:
Sales, exports *574*, 597, 598
Value *566*, 583, 584
Phosphatic fertilizers, production capacity *665*, 697, 698
Photoengravers 142
Photographers 140
Photographic equipment and supplies, workers 143, 145
Photographic process workers 143
Photographic studios 839, 854
Physical education, pupils enrolled 377
Physical-structure materials, consumption *812*, 818, 819

Physicians:
Consumer expenditures 316–319
Earnings *156*, 175, 176
Fees, indexes 75
Health insurance benefits 1066
Immigrants 75, 76
Number *67*, *68*, 75, 76, 140
Services, national expenditures for *65*, 73
Physicists 967
Physics, physiology, pupils enrolled 377
Piano and organ tuners 142
Pianos produced 697
Pickup balers on farms 469
Pig iron *574*, *575*, 599, 600
Pigs. *See* Hogs.
Pilots, airplane 772

Pine:
Colonial exports 1184
Lumber, prices and production 543, 547

Michael G. Garland, Chief

ACKNOWLEDGMENTS

Preparation of this edition was
under the direction of
William Lerner
Chief, Statistical Compendia Staff

The bicentennial edition of *Historical Statistics of the United States* is the third in the series of volumes inaugurated in 1949. In both form and content, the bicentennial edition has drawn heavily from, and built upon, the two prior editions. Both the first volume, *Historical Statistics of the United States, 1789 to 1945,* issued in 1949, and the second volume, *Historical Statistics of the United States, Colonial Times to 1957,* issued in 1960, were prepared by the Bureau of the Census with the cooperation of the Social Science Research Council (SSRC). Although the SSRC did not participate in the preparation of the bicentennial edition, its cooperation in the first two volumes was invaluable in establishing those volumes as the basis for continuing work in the field of historical statistics. Similarly, the many individuals and agencies who made important and distinctive contributions to the first two volumes were instrumental in the preparation of the present one. Immediately following the table of contents, therefore, are reprinted the "official roster and credits" pages from the first two volumes. Also, incorporated within the "Acknowledgments for Chapter Contributions," under the title of each edition, are the credits to contributors as they appeared in the first two volumes.

Analytical review and editing of text tables was primarily the responsibility of **Helen E. Teir,** Assistant Chief, Statistical Compendia Staff, Data User Services Division. During the period January 1972 to June 1973, **Elma D. Beynon** was primarily responsible for obtaining the cooperation and assistance of the many subject consultants and for immediate supervision of compilation operations. **Suzanne L. Worth** assisted Mrs. Beynon and, from July 1973 to November 1974, was responsible for working with consultants and for supervision of the technical and clerical staff. **Alma L. Butler,** assisted by **Kay Swenson,** was responsible for final editing and preparation of manuscript for the printer. The Census Library, **Dorothy W. Kaufman,** Chief, also lent valuable assistance.

The cooperation of the many contributors to this volume and to the prior editions is gratefully acknowledged. Following the practice established by the prior editions, every data series shown in this volume is, to the extent possible, specifically identified by source as to issuing agency and/or individual author, publication title, publisher, and date of issue. Frequently all five items are shown; frequently additional information is given.

Except for material specified in source citations as "copyright," the tables and text in this volume may be reproduced at will. Appropriate reference to this volume (see citation below) for material reproduced would be appreciated since it may be helpful to users of such material. Permission to reproduce copyrighted material should be obtained directly from the copyright owner.

Acknowledgments for Chapter Contributions viii

Introduction xi

N. Construction and Housing

CONSTRUCTION 610
Value of new construction put in place (N 1–60)—Expenditures for maintenance and repair and for private nonfarm residences (N 61–65)—Value of new public construction and expenditures for new private and public construction (N 66–77)—Construction contracts and bidding volume (N 78–110)—Building activity and construction cost indexes (N 111–139)—Wholesale price indexes (N 140–155).

HOUSING 631
New housing starts and mobile homes (N 156–170)—Public housing and Federal programs (N 171–191)—Residential structures and land (N 192–237)—Occupied units, vacancy rates, and price indexes (N 238–261)—Residential mortgages, Federal finance programs, and foreclosures (N 262–307).

P. Manufactures 652
Summary (P 1–12)—Production indexes (P 13–57)—General statistics, by major industry groups (P 58–67)—Horsepower of power equipment (P 68–73)—Shipments, inventories, and orders (P 74–92)—Corporate sales, profits, and stockholders' equity (P 93–106)—Capital in manufacturing industries (P 107–176)—Concentration in manufacturing (P 177–204)—Establishments, employment, payroll, value added, and capital expenditures (P 205–215)—Consumption of selected commodities (P 216–230)—Output of selected commodities (P (231–300)—Production capacity of selected industries (P 301–317)—Output value of finished commodities and construction materials (P 318–374).

Q. Transportation

HIGHWAY TRANSPORTATION 703
Domestic intercity traffic and operating revenues (Q 1–35)—Employment in selected types of transportation (Q 36–46)—Transportation output indexes (Q 47–49)—Mileage and cost of Federal-aid highway systems (Q 50–68)—Intercity motor carriers (Q 69–81)—Highway receipts, disbursements, construction, and debt (Q 82–147)—Motor-vehicle sales, registrations, fuel usage, insurance, ownership, and financing (Q 148–186)—Motor-vehicle speed, miles of travel, deaths, and accidents (Q 187–232)—Gasoline tax rates (Q 233–234)—Public transit (Q 235–250)—Oil pipelines operated and oil originated (Q 251–263).

RAIL TRANSPORTATION 723
Electric railways (Q 264–273)—Service, mileage, equipment, traffic, and revenue (Q 274–328)—Mileage built and mileage in receivership (Q 329–330)—Freight traffic and revenue, property investment, capital, income, expenses, interest, and dividends (Q 331–377)—Tax accruals (Q 378–384)—Grade crossings, fuel received, ties and rails laid, and purchases (Q 385–397)—Employment, wages, accidents, and fatalities (Q 398–409)—Pullman Company operations (Q 410–412).

WATER TRANSPORTATION 742
Persons entering by ship (Q 413)—Employment and wage scale on merchant vessels (Q 414–416)—Documented merchant vessels, by type, material of which built, and trade (Q 417–437)—Shipbuilding and repair (Q 438–472)—Merchant vessels launched and owned, world and United States (Q 473–480)—Documented vessels, by region, type, and service (Q 481–505)—Capacity of vessels entered and cleared (Q 506–517)—Waterborne imports, exports, and domestic cargo (Q 518–541)—Great Lakes and canal traffic (Q 542–557)—River, harbor, and canal expenditures (Q 558–564).

AIR TRANSPORTATION 767
Aircraft production and exports (Q565–576)—Domestic and international transportation (Q 577–590)—Revenues and expenses (Q 591–603)—Airports, aircraft, pilots, and miles flown (Q 604–623)—Accidents (Q 624–637).

R. Communications

TELEPHONE AND TELEGRAPH SYSTEMS 775
Telephones, conversations, and toll rates (R 1–16)—Bell and independent companies, summary (R 17–45)—Western Union Telegraph Company, summary (R 46–55)—Domestic and international telegraph industries (R 56–88)—International communications rates (R 89–92).

RADIO AND TELEVISION 792
Stations, sets produced, and households with sets (R 93–105)—Advertising expenditures, finances, and employment (R 106–139)—Safety and special radio stations (R 140–162).

POSTAL SERVICE, NEWSPAPERS, AND BOOKS 801
Post offices, finances, material issued, mail handled, and employees (R 163–187)—Postal rates (R 188–191)—New books and new editions published (R 192–217)—Newsprint consumption, newspapers, and periodicals (R 218–257).

S. Energy 811
Horsepower of prime movers (S 1–14)—Raw material and fuel consumption (S 15–31)—Electric energy production (S 32–52)—Electric generating plants and installed capacity (S 53–94)—Fuel consumption by electric utilities (S 95–107)—Electric energy service, prices, and use (S 108–132)—Finances of privately owned electric utilities (S 133–146)—Rural electrification (S 147–159)—Water power (S 160–175)—Natural gas and gas utility and pipeline industries (S 176–218).

T. Distribution and Services 834
National income originating, persons engaged, and average earnings (T 1–42)—Legal form of organization (T 43–57)—Inventories (T 58–78)—Retail establishments, sales, and persons engaged, by kind of business (T 79–196)—Sales of multiunit retail firms (T 197–219)—Chain stores, retail trade margins, and retail store sales (T 220–271)—Department store indexes (T 272–273)—Wholesale establishments, sales, expenses, and persons engaged, by kind of business (T 274–371)—Wholesale sales, stocks, and trade margins (T 372–390)—Service establishments and receipts, by kind of business (T 391–443)—Advertising volume, expenditure indexes, and newspaper lineage (T 444–491).

U. International Transactions and Foreign Commerce

INTERNATIONAL TRANSACTIONS AND FOREIGN AID 858
Balance of international payments (U 1–25)—U.S. investments abroad and foreign investments in U.S. (U 26–74)—U.S. foreign grants and credits (U 75–186).

FOREIGN COMMERCE 876
Value of exports and imports (U 187–200)—Foreign trade related to production (U 201–206)—Value of free and dutiable imports (U 207–212)—Value of exports and imports by economic and end-use classes and by groups of customs districts (U 213–273)—Exports and imports of selected merchandise (U 274–316)—Value of exports and imports, by country (U 317–352).

V. Business Enterprise

BUSINESS POPULATION 908
Number, receipts, and profits of business enterprises (V 1–12)—Firms in operation, formations, failures, and turnover (V 13–37)—Mergers (V 38–40)—Corporations and share of corporate income (V 41–65)—Income of unincorporated enterprises (V 66–77)—Manufacturing and trade sales and inventories (V 78–107).

CORPORATE ASSETS, LIABILITIES, AND INCOME 917
Corporate finances, all industries (V 108–140)—Nonfinancial corporations (V 141–166)—Selected corporate financial items, by industrial division and by size of total assets (V 167–196)—Selected financial items for selected utility industries (V 197–270)—Value of plant and equipment in regulated industries (V 271–284)—Selected financial items for large manufacturing corporations (V 285–305)—Business expenditures for new plant and equipment (V 306–332).

W. Productivity and Technological Development

PRODUCTIVITY INDEXES 943
National productivity (W 1–11)—Productivity in selected industries (W 12–54)—Productivity in selected utilities, distribution, and nonfinancial corporations (W 55–66)—Farm productivity (W 67–81).

COPYRIGHTS, PATENTS, AND TRADEMARKS 954
Copyright registrations, by type (W 82–95)—Patents, by type and patentee (W 96–106)—Trademarks (W 107–108).

RESEARCH AND DEVELOPMENT 960
Expenditures and obligations (W 109–167)—Employment of scientists and engineers (W 168–180).

X. Financial Markets and Institutions

FLOW OF FUNDS 968
Debt of nonfinancial borrowers, and credit market funds (X 1–113)—Assets, liabilities, saving, and investment of households, personal trusts, nonprofit organizations, nonfinancial business, and State and local governments (X 114–262)—Money supply, time deposits, and savings accounts (X 263–292)—Summaries of government securities, bond and mortgage, and corporate equities markets (X 293–392).

NET PUBLIC AND PRIVATE DEBT 989
By major sectors (X 393–409).

MONEY SUPPLY AND GOLD 990
Money stock, and currency in circulation (X 410–437)—Changes in gold stock (X 438–443).

INTEREST RATES AND SECURITY MARKETS 996
Money market rates (X 444–455)—Commercial and finance company paper and bankers' acceptances (X 456–465)—Bank rates on short-term business loans (X 466–473)—Bond and stock yields and prices (X 474–498)—Security issues (X 499–516)—Value and volume of sales on securities exchanges (X 517–535)—Mutual funds (X 536–539)—Federal Reserve Board margin requirements, stock market credit, brokers' loans, and consumer credit (X 540–560).

BANKING 1010
Early State banks and Second Bank of the U.S. (X 561–579)—Number, assets, and liabilities of banks, by type of bank (X 580–688)—Deposits, debits, and deposit turnover (X 689–715)—Banking offices and deposit insurance (X 716–730)—Branch banking (X 731–740)—Bank suspensions and closings (X 741–767)—Earnings and expenses, national and commercial banks (X 768–791)—Bank clearings at principal cities (X 792–795)—Federal Reserve banks (X 796–820).

NONBANK FINANCIAL INSTITUTIONS 1044
Mutual savings banks (X 821–833)—Savings and loan associations (X 834–844)—Postal Savings System (X 845–849)—Federal and federally sponsored agencies (X 850–863)—Credit unions (X 864–878).

INSURANCE 1050
Life insurance, by type (X 879–889)—Sales and finances of U.S. life insurance companies (X 890–917)—Property-liability insurance (X 918–932)—Stock and mutual companies (X 933–956)—Private health insurance (X 957–962).

Y. Government

ELECTIONS AND POLITICS 1067
Methods of electing presidential electors (Y 1–26)—Voter participation in presidential elections (Y 27–78)—Electoral and popular vote cast for President (Y 79–186)—Costs of presidential elections (Y 187–188)—Legislative activity (Y 189–203)—Political party affiliation (Y 204–210)—Vote for and apportionment of Representatives (Y 211–271).

GOVERNMENT EMPLOYMENT AND FINANCES 1086
Employment and payrolls (Y 272–334)—Federal Government finances (Y 335–357)—Internal revenue collections (Y 358–373)—Income tax returns (Y 374–411)—Tax liability and rates, for selected groups (Y 412–439)—Estate and gift tax returns (Y 440–456)—Outlays and debt of the Federal Government (Y 457–504)—Federal, State, and local government revenue, expenditure, and debt (Y 505–566)—Federal Government revenue, expenditure, and debt (Y 567–637)—Federal grants to State and local governments (Y 638–651)—State and local government revenue, expenditure, and debt (Y 652–709)—State government revenue, expenditure, and debt (Y 710–782)—Local government expenditure, debt, and revenue (Y 783–848).

ARMED FORCES AND VETERANS 1135
Cost of U.S. wars (Y 849–855)—Characteristics of the Armed Forces, by war (Y 856–903)—Military personnel on active duty (Y 904–916)—Selective Service (Y 917–942)—Veterans in civil life (Y 943–970)—Expenditures of Veterans Administration (Y 971–997)—Veterans pensions and compensation, medical care, and life insurance (Y 998–1031).

Z. Colonial and Pre-Federal Statistics 1152
Population (Z 1–132)—Slave trade and prices (Z 133–168)—Components of wealth (Z 169–191)—Agriculture censuses and weekly diets (Z 192–212)—Foreign trade, shipping, slaves imported, and articles exported (Z 213–294)—Trade in coal, iron, furs, indigo, silk, tobacco, tea, rice, naval stores, and timber (Z 295–509)—Vessels built (Z 510–529)—Whaling and cod fishery (Z 530–538)—Wages and prices (Z 539–584)—Exchange rates, silver prices, credit, money, and tax collections (Z 585–615).

Bureau of the Census

ROBERT W. BURGESS, *Director*
A. Ross Eckler, *Deputy Director*
Howard C. Grieves, *Assistant Director*
Conrad Taeuber, *Assistant Director*
Morris H. Hansen, *Assistant Director for Statistical Standards*
Lowell T. Galt, *Assistant Director for Operations*
Walter L. Kehres, *Assistant Director for Administration*
Calvert L. Dedrick, *Chief, International Statistical Programs Office*
A. W. von Struve, *Acting Public Information Officer*

HERMAN P. MILLER, *Historical Statistics Project Director*

This volume stems from a joint interest by the Bureau of the Census and the Social Science Research Council. It was planned, assembled, edited, and published by the Bureau, with the advice and assistance of the Committee on Historical Statistics appointed by the Council. Many other individuals and agencies cooperated and made significant contributions to this project. General acknowledgments for each chapter are presented on p. VII; other acknowledgments frequently appear in the text discussions of the various chapters.

The volume was prepared in the Bureau of the Census under the general direction of Edwin D. Goldfield, Chief, Statistical Reports Division. Herman P. Miller served as the Project Director and was primarily responsible for the planning, organizing, and supervising of all aspects of the compilation of the data. Dr. Miller also served as executive secretary of the Committee on Historical Statistics, handled liaison matters for the Committee, and participated in its selection of experts to serve as consultants. O. Halbert Goolsby acted as staff assistant.

Morris B. Ullman, who supervised the preparation of the previous volume, *Historical Statistics of the United States, 1789–1945*, was responsible for planning during the early stages of the project.

William Lerner, Assistant Chief, Statistical Reports Division, was primarily responsible for the planning and supervising of the publication aspects of the volume and for the review and editing of the text and tables. Dorothy M. Belzer was responsible for the tabular presentation of the data and preparation of the material for the printer. The Census Library Branch, Louise H. Clickner, Chief, also lent valuable assistance.

Social Science Research Council

The Committee on Historical Statistics appointed by the Social Science Research Council participated actively in the preparation of this volume, in the extension of the subjects to be added, and in planning the general procedures for securing expert assistance on each subject. As the project was developed the Committee, especially the Chairman, was primarily responsible for consideration of problems of data selection and format, for general appraisal of the quality of the series suggested for inclusion, and for the selection of consultant-specialists for the various subjects. The Committee as a whole, or through specially qualified members, reviewed the plans for inclusion of specific series and discussed areas of study which presented unusual problems.

BUREAU OF THE CENSUS

J. C. CAPT, *Director*
PHILIP M. HAUSER, *Deputy Director*
A. ROSS ECKLER, *Assistant Director*
HOWARD C. GRIEVES, *Assistant Director*
MORRIS H. HANSEN, *Statistical Assistant to the Director*
ROBERT Y. PHILLIPS, *Executive Assistant to the Director*
CALVERT L. DEDRICK, *Coordinator, International Statistics*
FRANK R. WILSON, *Information Assistant to the Director*

While this volume has been planned, assembled, and edited in the Bureau of the Census, with the advice and assistance of the Social Science Research Council, many other individuals and agencies contributed to its preparation, directly and indirectly. In some instances, individuals devoted themselves full-time for the period necessary to complete their phase of the project. In other instances, contributions were prepared by individuals while they maintained heavy responsibilities in their own offices. A number of private publishers, authors, and research organizations generously granted permission to use their materials. In some cases, they also made additional contributions in time and energy. General acknowledgments for each chapter are given on p. IV; other specific acknowledgments appear within the text in the various sections of the volume.

This volume was prepared in the office of Morris H. Hansen, Statistical Assistant to the Director of the Bureau of the Census, under the supervision of Morris B. Ullman, Chief, Statistical Reports Section, by Bruce L. Jenkinson, A. Benjamin Handler, and William Lerner. Mr. Jenkinson, Chief, Statistical Abstract Unit, was primarily responsible for the planning and preparation of the report; Mr. Handler, Executive Secretary of the Social Science Research Council Committee on the Source Book of Historical Statistics, was primarily responsible for procurement of data and relationships with the agencies and individuals who contributed to the publication; and Mr. Lerner, Statistician, Statistical Abstract Unit, was primarily responsible for the review and editing of the materials as to content, adequacy, and coverage.

Dorothy M. Belzer acted as staff assistant, particularly with respect to tabular presentation, and was responsible for preparation of the materials for the printer. Claire F. Cahill checked all citations by reference to the original published sources and offered many constructive suggestions as to the content of the book.

Social Science Research Council

The Social Science Research Council Committee on the Source Book of Historical Statistics, Advisory to the Bureau of the Census, played an important role in the preparation of this volume. The Chairman of the Committee and its members gave considerable time and thought to the review of plans, to advising on proper courses of action, and contributed in other ways. In particular, J. Frederic Dewhurst, Chairman, was in a large measure responsible for the initiation of the project. The completed volume owes much to his original outline of purpose, coverage, and arrangement. For a detailed statement of the origins of this historical volume, see introductory text.

Through a grant by the Committee on Research in Economic History (Arthur H. Cole, Chairman) of the Social Science Research Council, the full-time services of the Executive Secretary of the Advisory Committee were made available to the Bureau of the Census.

Acknowledgments for Chapter Contributions*

Chapter N. Construction and Housing

Historical Statistics . . . Colonial Times to 1970

Consultants—Samuel J. Dennis, Bureau of the Census; Lawrence N. Bloomberg, Office of Management and Budget

Major contributors—Leonard J. Norry and David Siskind, Bureau of the Census; Robert E. Lipsey, National Bureau of Economic Research, Inc.

Historical Statistics . . . Colonial Times to 1957

Principal consultant—Leo Grebler, University of California, Los Angeles

Review consultant—Raymond W. Goldsmith, National Bureau of Economic Research, Inc.

Historical Statistics . . . 1789–1945

Basic text and series on construction supplied by Keith W. Johnson, Economic Analyst, Samuel J. Dennis, Chief, Construction Economics Unit, and William H. Shaw, Chief, Construction Statistics Unit, Construction Division, in the Bureau of Foreign and Domestic Commerce, Department of Commerce. Material was also supplied by: H. E. Riley, Chief, Construction and Public Employment Division, Bureau of Labor Statistics, Department of Labor; and Fred E. Schnepfe, Chief, Liaison Division, Public Roads Administration, Federal Works Agency.

Material on housing prepared by Bureau of the Census staff.

Chapter P. Manufactures

Historical Statistics . . . Colonial Times to 1970

Consultants—Daniel Creamer, The Conference Board, Inc.; Solomon Fabricant, New York University

Major contributors—John W. Kendrick, George Washington University; Vivian E. Spencer, University of Connecticut

Historical Statistics . . . Colonial Times to 1957

Principal consultant—Daniel Creamer, National Industrial Conference Board, Inc.

Review consultant—John W. Kendrick, George Washington University

Other contributor—John A. Waring, Washington, D.C.

Historical Statistics . . . 1789–1945

Material on manufactures prepared by Bureau of the Census staff.

Chapter Q. Transportation

Historical Statistics . . . Colonial Times to 1970

Consultant—Thor Hultgren, University of Wisconsin

Historical Statistics . . . Colonial Times to 1957

Principal consultant—Thor Hultgren, National Bureau of Economic Research, Inc.

Review consultant—George R. Taylor, Amherst College

Other contributor—Bureau of Public Roads

Historical Statistics . . . 1789–1945

List of series on railroads suggested by: Bureau of Transport Economics and Statistics, Interstate Commerce Commission; and Bureau of Railway Economics, Association of American Railroads.

Material on water transportation prepared by staff of Bureau of the Census.

Series on road transportation supplied by Division of Research Reports and Statistics, Public Roads Administration, Federal Works Agency.
